THE  
CANADA YEAR BOOK  
1930

THE OFFICIAL YEARBOOK OF THE GOVERNMENT OF CANADA  
CONTAINING A SUMMARY OF THE ACTS AND REGULATIONS  
PASSED DURING THE YEAR 1930

PUBLISHED BY THE GOVERNMENT OF CANADA  
OTTAWA, 1931

7047

## PREFACE

Since Confederation, the Canada Year Book has been the annual official statistical record of the development of Canada.

This publication is designed to co-ordinate all essential elements of progress against an analytical background that gives perspective to the chapter material. Outstanding developments are dealt with by means of special articles, each carefully prepared and sponsored by the appropriate Government Department.

When Newfoundland entered Confederation as a new Province on Mar. 31, 1949, the area of Canada was extended overnight by 154,700 square miles and the population was increased by 348,000. The planning and editing of this edition of the Year Book has, in consequence, involved the incorporation of statistical data for Newfoundland. But since latest figures available are mainly from the 1945 Newfoundland Census, and are not in any sense comparable with data for other provinces, the problem has had to be met by the introduction of special sections for Newfoundland in appropriate chapters. For instance: a section on the Constitutional Development of Newfoundland is included in Chapter III—"Constitution and Government"; Population Statistics for Newfoundland are given at the end of Chapter IV—"Population"; Vital Statistics for Newfoundland appear at the end of Chapter VI; the background of Crime and Delinquency in Newfoundland is given in Chapter VIII; the educational system of Newfoundland is reviewed in Chapter IX—"Education and Research"; statistics of the Newfoundland Census of Agriculture, 1945, are given in Chapter XI; and statistics of Newfoundland's fisheries appear in Chapter XIV.

Naturally, such double treatment—first for the older provinces collectively and then for Newfoundland—has required more space than will be necessary after the Canada-wide Census of 1951 is completed, when all ten provinces can be shown together.

In addition to the Newfoundland material, feature articles carried in this edition include: Part II of the Climate of Canada article at pp. 33-70 (Part I is given at pp. 41-62 of the 1948-49 Year Book) consisting of detailed tables showing long-term averages of climatic data for representative stations; the Influence of the Royal Canadian Mounted Police in the Opening Up of Western Canada, pp. 317-331; up-to-date articles on the Iron-Ore Resources of the Quebec-Labrador Region and the Titanium Deposits of Quebec, at pp. 505-513; a summary of the Special Report on the Royal Commission on Prices, at pp. 978-982; and a study of the Distribution of Investments and their Influence on the Capital Market, pp. 1088-1095.

The value of a volume such as this depends, to no small degree, on an index of items, well classified and cross-referenced, to enable information to be located quickly. Such an index is to be found at the end of the book which, with the synopsis of contents at the head of each chapter and the general table of contents at p. vii, will give assistance in this direction. An interpretation of the symbols used in the tables throughout will be found facing p. 1.

The Statistical Summary of the Progress of Canada from 1871 to the latest year, given at pp. xv to xxvii, brings to a focus the advances made in all important branches of economic and social activity over a period of almost 80 years. At the time of going to press changes in the Federal Cabinet were announced and certain new Departments were set up. These matters are, therefore, dealt with in the final Chapters and in Appendix II.

All sections of this edition have been carefully revised by the most competent authorities and include the latest information at the time of going to press.

The present volume has been edited by A. E. Millward, Director, Canada Year Book Division, assisted by Herbert H. Coulson and the Year Book Staff. Charts, graphs and layouts have been made by or under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

Acknowledgments are hereby tendered to the numerous officials of the Federal and Provincial Governments, and to others who have contributed material. Whenever possible, credit is given to the persons and various services concerned by means of footnotes to the respective sections.

With a view to the improvement of future editions, the Bureau will be glad to hear of any errors that may have escaped notice and to receive suggestions with regard to omissions or to methods of treatment.

HERBERT MARSHALL.

Dominion Statistician.

# DISTANCES BETWEEN PRINCIPAL POINTS IN CANADA.\*

NOTE.—Generally, the distances given are the shortest by railway.

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel, but when an attempt is made to compile such data difficulties are at once encountered. Railway distances are the logical choice, even though the distances are of increasing interest to a vast body of travellers by automobile and are a useful alternative. Railway distances represent usually the shortest practicable land distances between two points and even to-day the bulk of freight and passenger traffic is by rail. Again, distances by air (sometimes called "bee-line" distances) are only useful in practice to those who travel by air. This is a growing phase of transportation, of course, but has not yet assumed such proportions that its tabulation should displace the more usual one. Again, it is not a difficult matter to estimate air-line distances from a map made to a convenient scale, whereas the ordinary reader is not able to obtain railway distances easily.

Even though it be decided to adopt railway distances as most useful, it is necessary to decide whether the most travelled route between two places or the shortest railway route should govern. In the tables given below, the distances between points are the shortest distances by railway and not necessarily the most travelled routes or the routes by which main trains travel. They are compiled principally from the railway time tables. The main table includes the capital of each province and some of the main shipping points chosen principally, but not altogether, by population; the subsidiary tables include distances of local importance. Included in the distances from Charlottetown is the distance from Borden to Cape Tormentine, over which the trains are transported by ferry; similarly, the train ferry distance between Mulgrave and Point Tupper is included in the distance from Halifax to Sydney. In the main table all the distances from Victoria include the distance travelled by boat from Victoria to Vancouver. However, wherever possible, railway distances only are used. In certain distances from Three Rivers and from Quebec it is possible, by the use of ferries, to travel by shorter routes than those given in the tables, the rail route only being taken in these cases.

Where boat routes are given, the best approximation of the distance travelled is used.

The air-line distances between are not necessarily the straight-line distances, but are the distances over the routes usually travelled by aeroplanes in good weather.

# ARTICLES AND MISCELLANEOUS TEXT MATERIAL (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT

NOTE.—It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1950 Year Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When articles cover more than one subject they are listed under each appropriate heading.

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada, as a rule, the imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

	<i>Pounds per Bushel</i>		<i>Pounds</i>
<b>Grains—</b>		<b>Fruits (standard conversions)—</b>	
Wheat.....	60	Apples, per barrel.....	135
Oats.....	34	Apples, per box.....	43
Barley.....	48	Pears, per bushel.....	50
Rye.....	56	Plums “ “.....	50
Buckwheat.....	48	Cherries “ “.....	50
Flaxseed.....	56	Peaches “ “.....	50
Corn.....	56	Grapes “ “.....	50
Mixed grains.....	50	Pears, per box.....	42
All others.....	60	Strawberries, per quart.....	1·25
<b>Wheat Flour—</b>		Raspberries “ “.....	1·25
1 barrel equals 196 pounds and approxi- mately 4·5 bushels of wheat are used in the production of a barrel of flour.		Loganberries “ “.....	1·25

### Relative Weights and Measures, Imperial and United States

The following tables of coefficients may be used to translate amounts expressed in one unit to the other or vice versa.

1 Imperial pint=20 fluid ounces.	1 Imperial proof gallon=1·36 United States proof gallon.
1 United States pint=16 fluid ounces.	1 short ton=2,000 pounds.
1 Imperial quart=40 fluid ounces.	1 long ton=2,240 pounds.
1 United States quart=32 fluid ounces.	1 barrel crude petroleum=35 Imperial gallons.
1 Imperial gallon=160 fluid ounces.	
1 United States gallon=128 fluid ounces.	

### FISCAL YEARS OF FEDERAL AND PROVINCIAL GOVERNMENTS

The Federal Government fiscal year ends on Mar. 31.

The dates on which the fiscal years of the provinces end are as follows:—

Newfoundland.....	Mar. 31	Ontario.....	Mar. 31
Prince Edward Island.....	Mar. 31	Manitoba.....	Mar. 31
Nova Scotia.....	Nov. 30	Saskatchewan.....	Mar. 31
New Brunswick.....	Oct. 31	Alberta.....	Mar. 31
Quebec.....	Mar. 31	British Columbia.....	Mar. 31

Throughout the Year Book, fiscal-year figures are so indicated in the text and headings of tables; in all other cases figures are for calendar years.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA, 1871-1948

NOTE.—In the following summary, the statistics of fisheries (1871-1911), trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906; subsequently to years ended Mar. 31, except in the case of trade, where, as indicated by footnotes, calendar-year figures are given for certain later years. Agriculture, dairying, fisheries (from 1931), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road-transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway statistics to the years ended June 30, 1871-1911, and to the calendar years 1921-48. Canal statistics are those of the navigation seasons. Telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

# STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Area of Canada, including Newfoundland which entered Confederation in 1949, is 3,845,144 sq. miles. The land area is 3,499,116 sq. miles and the fresh water area 234,028 sq. miles (excluding Labrador, not surveyed).

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

<sup>1</sup> Figures are subject to revision.

<sup>2</sup> These are intercensal estimates and will be adjusted after the next census.

<sup>3</sup> Quinquennial census figures.

<sup>4</sup> Exclusive of the Territories.

<sup>5</sup> Includes all farmers' sons, 14 years and over, whether or not reported with gainful occupation.

<sup>6</sup> Excludes nomadic Indians and Indians on reserves.

<sup>7</sup> Includes pulp-mill employees and almost all mine and smelter employees, except clerical workers.

<sup>8</sup> Exclusive of persons on Active Service on June 2, 1941.

<sup>9</sup> Clerical workers in government service were included with "Service".

<sup>10</sup> Fiscal year.

<sup>11</sup> Figures for years back to 1939

# STATISTICAL SUMMARY OF THE PROGRESS OF CANADA—continued

The length of the Canada-United States boundary is 3,986.8 miles and that of the Canada-Alaska boundary is 1,539.8 miles. The total mainland coast line of Canada (not accurately computed) is estimated at 17,863 miles.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 25 cents per lb.

<sup>12</sup> Data shown for 1946-48 represent cheddar and other cheese made from whole milk; prior to 1942 the figures include other cheese for Quebec only.

<sup>13</sup> Prior to 1921 this item does not include

skim milk and buttermilk.

<sup>14</sup> Fiscal years prior to 1931.

hand trades, repair and custom work. Figures for 1931-48 include non-ferrous metal smelting not included in earlier years.

<sup>12</sup> Since 1924 the net value of production is computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products.

<sup>13</sup> 1876.

<sup>14</sup> 1875.

<sup>15</sup> Duplication eliminated.

<sup>16</sup> Fiscal years.

figures made available by the Department of Insurance. <sup>9</sup> Prior to 1920 figures are not comparable.  
<sup>10</sup> Compiled from data supplied voluntarily to the Superintendent of Insurance by provincial companies but estimated to cover about 90 p.c. of all provincial business. The figures include all the large and most of the small provincial companies.  
<sup>11</sup> Not including fraternal insurance.

## INTRODUCTION\*

A detailed review of the post-war period up to 1949 will be found in the 1948-49 Year Book at pp. xxix-xliii, where general economic developments are discussed, and at pp. 1113-1125, where the more strictly post-war reconstruction efforts are considered. The present review is confined largely to the economic developments of 1949 and early 1950.

The outstanding developments of this period were: the union of Newfoundland and Canada on Mar. 31, 1949, devaluation and the fact that the Canadian economy was able to maintain economic stability even with a moderate recession in the United States commencing in the autumn of 1948 and reaching a low point in mid-1949, and increasing trade difficulties overseas. These and other important developments of the past year are dealt with under the following broad headings: (1) economic developments during 1948-50; (2) economic policies and administration; and (3) federal-provincial economic relations.

### **Economic Developments During 1948-50†**

Canada's gross national product reached a new peak in 1949. The preliminary estimate is \$15,950,000,000, an increase in value terms of 3 p.c. and in volume terms of 2 p.c. over 1948. The labour force contained little over 5,100,000 persons, of whom fewer than 135,000 were unemployed and fewer than 45,000 were in the Armed Services. Compared with 1939, gross national product had increased by about 185 p.c. in value terms and 70 p.c. in volume terms while the labour force had increased by about 15 p.c. (and the employed segment of it by about 30 p.c.) and the population had increased by about 17 p.c. Roughly, this would indicate an increase in per-year output per employed person of about 30 p.c., and in real per-capita consumer expenditures of about 50 p.c.

The outlook for 1950, in the early months of the year, was for a further small increase in gross national product over the 1949 level, probably about 2 p.c. The principal factors contributing to the increase would be a higher level of private investment and of consumer and government expenditures. On the other hand, some reduction in export demand was expected, the loss occurring principally in the sterling-area market. The indicated increase in gross national product, when account is taken of increasing levels of productivity, would result in little change in the level of employment. Some increase in unemployment is, therefore, to be expected in 1950. The reduction of certain types of exports and some increase in unemployment would result in an increased number of industrial and associated area problems.

Of the various income claimants on the gross national product in 1949, the only group whose share increased substantially over 1948 was the salary- and wage-earner, an increase of about 7 p.c. Net income from unincorporated non-agricultural business was little changed. With respect to investment income, preliminary estimates indicate a moderate reduction in corporate profits and some increase in dividends, interest and rent. In agriculture, retroactive grain payments totalling over \$200,000,000 largely offset losses sustained through poorer crop yields and some

\*Prepared by the Economic Research and Development Branch, Department of Trade and Commerce.

†Newfoundland is excluded from these analyses but is dealt with briefly at p. xi.

softening of prices so that the net income of farm operators declined by only about 4 p.c. The net national income of these four groups of claimants increased by 4 p.c. between 1948 and 1949 while personal income realized out of national income and government transfer payments to individuals (family allowances, unemployment insurance benefits, etc.) increased by 5 p.c.

**Foreign Trade.**—Canada's commodity exports reached a peak in 1948 at about \$3,100,000,000, the principal supports to this high level of trade being prosperity in the United States and the heavy reconstruction and relief needs of Western Europe, the latter made in some considerable part effective by extensive financial aid from the United States and Canada. Commodity exports dropped to \$3,000,000,000 in 1949 or by 3 p.c. in value terms and 5 p.c. in volume terms. The principal causes of the decrease were that the recovery of European production reduced emergency demands and continuing foreign exchange difficulties limited purchases in Canada. In spite of a recessionary movement starting in 1948 and continuing into 1949 in the United States, the value of commodity exports to that country remained unchanged from the 1948 level of \$1,500,000,000. Exports to the United Kingdom increased a little to \$700,000,000 while exports to the rest of the world were over 10 p.c. lower at \$800,000,000.

The value of exports of most agricultural products were lower, with lower prices and lower volume both contributing causes. The total value and volume of agricultural exports were higher, however, as a result of a substantial increase in exports of wheat. Exports of timber, pulpwood, wood-pulp and most types of paper were lower, but the loss in the wood-product exports was partly offset by an increase of over 10 p.c. in exports of newsprint. The strongest part of the export market, in spite of some significant downward revisions in prices early in 1949, was the primary and semi-processed metals and minerals, where a gain in value of exports of about 7 p.c. occurred. The metals contributing to the gain were copper, lead, nickel, zinc and iron ore. Losses were general in manufactured goods, but the exports of the iron and steel group were sustained by larger exports of locomotives, railway rolling-stock and farm implements.

Unlike merchandise exports, merchandise imports continued to rise in 1949, to reach a level of \$2,760,000,000, an increase of 5 p.c. in value and 2 p.c. in volume from 1948. The gains were registered in wood and paper products, iron products, non-ferrous metal products, chemical products and agricultural and related primary products. Imports of non-metallic mineral products and fibres and textiles were lower.

In the field of services (tourist expenditures, shipping charges, interest and dividends, etc.), preliminary estimates indicate that exports decreased slightly and imports were little changed from 1948. When these are added to commodity exports and imports, respectively, total exports of goods and services were close to \$4,000,000,000 in 1949, a decrease of about 2 p.c. from the preceding year, and total imports were a little more than \$3,800,000,000, an increase of about 5 p.c.

In September, 1949, there was a world-wide downward adjustment of the value of national currencies in terms of the United States dollar. This adjustment came too late in the year to affect significantly Canada's external trade. Its probable effect in 1950, in part notable early in the year but probably more marked later in the year, would be to reduce further Canada's exports to the non-dollar area and encourage imports from that area, since most of the countries involved

devalued more than Canada. On the other hand, Canada's own devaluation was expected to increase the value of exports to the United States—in fact taking place early in 1950—and discourage imports from that country. The general effect of such developments, if realized in any substantial degree, would be to ease Canada's balance of payments position.

**Investment and Resources Development.**—The most important single dynamic influence contributing to a rising level of economic activity in Canada in the post-war period has been investment in durable physical assets, such as plants and office buildings, machinery and equipment, schools and roads and residential housing. This investment amounted to \$3,400,000,000 in 1949, an increase over 1948 of 9 p.c. in value terms and 4 p.c. in volume terms. Private investment increased from \$2,365,000,000 to \$2,490,000,000 between the two years, or by 5 p.c., and the investment of Federal, Provincial and municipal governments from \$785,000,000 to \$940,000,000, or by 20 p.c. Investment in construction of all kinds increased by over 10 p.c. to nearly \$2,100,000,000, and machinery and equipment investment by 5 p.c. to \$1,350,000,000.

By broad groups, total investment increased during 1949 as follows: institutional services (schools, hospitals, etc.), 36 p.c.; mining, 27 p.c.; finance, insurance and real estate, 21 p.c.; utilities, housing and direct government, each by 17 p.c.; and agriculture and fishing, 13 p.c. It decreased in wholesale and retail trade by 5 p.c.; manufacturing, 10 p.c.; commercial service, 26 p.c.; construction, 29 p.c.; and forestry, 32 p.c.

The largest absolute increases in investment occurred in the housing and utility fields, each by approximately \$100,000,000. Some 91,000 housing units were completed and 93,000 units started in 1949, and the value of work put in place was close to \$800,000,000. This was almost one-quarter of all construction investment. The further development of water-power resources was the most important part of investment in the utilities field in 1949. Some 400,000 h.p. of hydro-generating capacity was installed in 1948 and 475,000 h.p. in 1949. Projects in hand at the end of 1949 would augment capacity by another 2,400,000 h.p. Principal additions to steam-generating capacity were 38,000 k.w. in 1948 and 115,000 k.w. in 1949, while some 500,000 k.w. are projected. Total investment of the electric-power industry in 1949 was close to \$300,000,000. A treaty was signed in February, 1950, between Canada and the United States for an increased diversion of water to hydro-electric purposes at Niagara Falls. This will permit the construction of new power plants on the Canadian side of the Niagara River to replace a number of existing plants that cannot make the most effective use of the available water.

Other important fields of resource development were related to mining. The most outstanding during 1949 was the bringing in of oil wells and the proving up of reserves of oil in Alberta. To the 226 producing wells in existence at the end of 1947 in Alberta, 273 were added in 1948 and another 565 in 1949. Proved reserves at the end of 1949 were estimated at 1,300,000,000 barrels. This development has also been accompanied by the bringing in of additional natural gas wells and the proving up of additional reserves of natural gas. The establishment of Western Canada as a major oil producer has necessitated increased investment in petroleum processing and distributing facilities. Oil refinery capacity in Canada increased from 300,000 barrels per day in 1948 to 335,000 barrels per day in 1949,

and an additional 38,000 barrels per day is expected to be installed before the end of 1951. Starting in 1950 an oil pipe line will be laid from Edmonton to Superior, Wisconsin, a distance of 1,150 miles; this will widen the field of distribution of western oil.

Important iron-ore fields are being developed. Operations at Michipicoten, Ont., are being enlarged and exploration extended. At Steep Rock, Ont., a second ore-body is expected to be brought into production in 1951, and a third deposit, larger than either of the two now being developed, was discovered in 1949. On the Quebec-Labrador boundary approximately 350-400 miles north of the Gulf of St. Lawrence, exploration has established a field of over 350,000,000 gross tons of ore, largely of Bessemer grade, and the presence of manganese ore. Bringing this field into production will take a number of years and a large investment, since it will be necessary to build a railway inland from the Gulf.

A smaller but nevertheless important resource development is taking place at Allard Lake, Que., where a 27-mile railway is being built and a plant established to mine ilmenite ore for processing at Sorel, Que., to obtain titanium oxide slag and pig iron. An asbestos ore-body in northern Ontario is also being developed and is expected to be in production soon.

If investment intentions of business, home-buyers, institutions and governments are realized, the level of investment in 1950 will exceed that of 1949 by 5 p.c. and will probably amount to \$3,600,000,000. The indications are that larger capital expenditures will be made by the utility industries, the finance, insurance and real estate industries, the commercial service industries, the mining industries, the institutional services and in direct outlays of governments; that expenditures on housing and trade will remain unchanged; and that expenditures of the manufacturing industries, agriculture and fishing, forestry and construction industries will be lower.\*

**Consumer Expenditures.**—Consumer spending in 1949 stood at \$10,750,000,000, nearly 7 p.c. higher in value terms and 2.5 p.c. higher in volume terms than in 1948. Among the factors contributing to the increase were a 5 p.c. rise in personal income, referred to earlier, reduction in personal income taxes, payment of the refundable portion of wartime income taxes and a somewhat lower rate of personal savings. Although the rate of these savings dropped, the amount saved remained fairly steady at a little less than \$1,000,000,000 in both 1948 and 1949.

The largest increase in consumer expenditures was on durable goods like automobiles, furniture and household appliances. Expenditures on services, such as household operations and utilities, maintenance of automobiles, etc., were also higher. Expenditures on perishable goods, mostly food, increased only slightly and expenditures on semi-durable goods, mostly clothing, decreased slightly in volume terms.

**Government Expenditures.**—Government expenditures on goods and services (i.e., excluding subsidies and transfer payments to individuals and between governments) at \$2,100,000,000 increased more than any other group of expenditure in 1949 over 1948, the increase being 18 p.c. in value terms and 11 p.c. in volume

\**Private and Public Investment in Canada Outlook 1950*, published by the Economic Research and Development Branch, Department of Trade and Commerce.

terms. It has been noted under the heading on investment, p. xxxii, that public investment in durable physical assets increased by 20 p.c. The increase in the non-investment expenditures of governments was around 17 p.c. Total Federal Government expenditures on goods and services increased by over 30 p.c., and provincial and municipal expenditures by a little more than 10 p.c.

**Changing Influences in the Domestic Economy.**—Domestic demand was strong enough to more than offset a moderate weakness in export demand, with the result that no recessionary movement occurred such as developed in the United States in 1948-49. Domestic demand was also sufficiently pervasive that most industries, including many with important export markets, were able to maintain their volume of production at or increase it above the 1948 level. The aggregate demand, on the other hand, was not strong enough to bring about a continued substantial rise in prices. Nor was it strong enough to provide employment for all additional entrants to the labour force.

These influences became more evident in the last half of the year. The industry most adversely affected was forestry. Its level of operations declined substantially, partly as a result of efforts of pulp and paper mills to reduce pulpwood inventories and partly as a result of caution in the face of uncertainties in the export market. In the last quarter of the year, unfavourable weather conditions further reduced levels of operations in the woods. Consequently, the forest areas of the Maritimes, Quebec, Ontario and British Columbia witnessed high levels of unemployment in the winter of 1949-50. A weakening export demand for most agricultural products and some fish products during the year did not have an immediate effect on the level of activity of these industries but did affect the cash income of farmers and fishermen. Failure of domestic demand to offset reduced export demand also resulted in somewhat lower levels of operations in such manufacturing industries as shipbuilding, machine tools, wool textiles, leather, rubber and some branches of food processing. A reduced volume of exports also had an adverse effect on the transportation industries, the unemployment consequences of which were most evident in the Coastal Provinces. With these notable exceptions, however, most industries were able to maintain or expand production.

The fairly stable level of prices in 1949 in the face of falling prices in the United States is to be accounted for partly by the gradual removal of price controls, which kept Canadian prices below United States prices earlier, and partly by strong domestic demand. Wholesale prices on the whole were weakening in the first three-quarters of the year and increased briefly but fairly sharply immediately after devaluation in September. Consumer goods prices, as measured by cost-of-living indices, increased until after mid-year and then turned down to end the year only about 2 p.c. higher than at the first of the year.

### **Economic Policies and Administration**

Federal Government action during 1949 to assist Canadian producers and consumers to maintain a high level of economic activity can be conveniently classified into (1) direct action in the economic sphere to bolster foreign trade and domestic demand or assist some group in the community to cope with special types of problems; and (2) changes in the Government's administration so as to adapt it to handle economic problems more effectively. The highlights of these two aspects of the Federal Government's activities in 1949 are reviewed in the paragraphs that follow and on p. xl.

**Foreign Trade Measures.**—In seeking to improve Canada's foreign trade position in the unsettled post-war period, it has been necessary to take account of long-run and short-run objectives. The long-run objective has been to foster, with like-minded nations, the development of a high level of international trade on a multilateral basis, thereby attempting to reverse a trend to increasing economic nationalism evident before the War. The short-run objective has been to cushion the Canadian economy against unfavourable external economic influences resulting from the disorganization of war. This has taken two forms—the extending of various kinds of assistance to wartime allies, and the maintaining of the country's economic solvency in a world in which most national currencies were not freely convertible into other currencies.

In pursuit of the long-run objective Canada participated in the continuing work of numerous international organizations and extended her trade connections abroad.

The Conference of the contracting parties to the General Agreement on Tariffs and Trade, held at Annecy, France, from April to September, 1949, was one in which Canada took a leading part. The original 23 contracting parties to the General Agreement carried out tariff negotiations with 11 acceding countries. Although tariff negotiations were carried on between contracting parties and acceding countries only, the application of the most-favoured-nation rule resulted in Canada obtaining a number of important concessions that were not bargained for directly, some of the most important of which were received from other contracting parties.

Concurrently, the contracting parties held their third session and dealt with the practical applications of the general trade provisions which had been drafted at Geneva and at the first and second meetings of the contracting parties. A major task was to establish procedures by which important articles of the General Agreement could be applied, such as the method by which a country should introduce discriminatory measures to further its own industrial development or correct foreign exchange difficulties. The fourth session of the contracting parties to the General Agreement was held at Geneva from Feb. 23 to Apr. 6, 1950. The Conference worked out a method for the extension of General Agreement tariff concessions for a further three-year period and reviewed the trade-restriction effects of foreign exchange practices. It also did the preparatory work for a third set of multilateral tariff negotiations planned to begin at Torquay, England, in September, 1950. At that time, an opportunity will be provided for tariff negotiations not only between contracting parties and five or six other countries that have indicated an intention to accede to the General Agreement, but also among countries which are not contracting parties.

In the opening months of 1949 Canada and 46 other countries participated in a conference which resulted in the drawing up of an International Wheat Agreement. Subsequently, five exporting countries (Canada, the United States, Australia, France and Uruguay) and 36 importing countries signed the Agreement. The Agreement is operative for a four-year period, and calls for the exporting countries to furnish, and importing countries to purchase, a total of approximately 450,000,000 bushels each crop year. The Agreement limits the maximum selling price to \$1.98 per bushel in Canadian dollars and provides a minimum price of \$1.65 in the first year, dropping 11 cents each year to \$1.32 in the final year of the Agreement for No. 1 Northern wheat in store Fort William-Port Arthur or Vancouver. Canada's annual quota was set at approximately 200,000,000 bushels but is subject to change as other countries join the Agreement or importers' quantities are increased.

Canada took an active part in the deliberations of the Food and Agriculture Organization Conference held at Washington in December, 1949. The Conference dealt with means of increasing food production to the pre-war per capita level, of maintaining certain price relations between commodities and export and import prices, etc., for financing agricultural and development projects and for technical assistance to economic development. The Conference also decided to establish a Committee on Commodity Problems rather than establish an international commodity clearing-house proposed by a committee of experts convened to consider how to handle food commodity surpluses.

In keeping with its increasing importance as a world trader, Canada has steadily extended the Foreign Trade Service of the Department of Trade and Commerce in the post-war period. At the end of 1949 there were 56 senior officials and 41 assistants working abroad in 45 offices in 39 countries. During the year trade offices were opened in Istanbul and Manila, and trade officers were attached to the Canadian consulates at Boston and Detroit. Canada has also fostered trade by holding an annual international trade fair and by exhibiting at trade fairs elsewhere. The third Canadian International Trade Fair is being held at Toronto from May 29 to June 9, 1950. During 1949 Canada was an exhibitor at the British Industries Fair, the Milan International Fair and the Junior Chamber of Commerce Fair at Brussels. It also opened a new exhibit in the Canadian Court of the Imperial Institute, London, where it has had a continuous series of exhibits since 1894. Several travel and tourist exhibits also toured a number of United States cities during the year, and dairy exhibits were prepared for dairy expositions in the United States and the United Kingdom.

Canada maintains relations with 49 countries under trade agreements, conventions of commerce and similar arrangements. A number of these are with Commonwealth countries and provide for the exchange of tariff preferences. Of the 49 countries 36 are either members of or have made application to accede to the General Agreement. During 1949, Canada and Austria agreed to exchange most-favoured-nation treatment, while Venezuela failed to renew the *modus vivendi* it signed with Canada in 1941 and Ecuador terminated its *modus vivendi*, also in force since 1941.

In the field of immediate external trade problems, the outstanding development of 1949 and early 1950 was the devaluation in September, 1949, of the Canadian dollar by 10 p.c. in relation to the United States dollar. By doing this Canada made an adjustment to an intermediate position between the United States dollar and the pound sterling. Among the reasons that determined this decision were (1) the desire not to have Canada 'priced out' of important world markets by other countries' devaluation, nor to devalue to such an extent as to prevent many of these countries, such as the United Kingdom, from increasing the level of their exports to Canada so as to earn additional funds with which to buy Canadian exports; and (2) the desire to narrow Canada's own dollar gap with the United States by reducing the price of exports to and increasing the price of imports from that country without at the same time setting up strong new inflationary influences. Behind both sets of reasons was the necessity of protecting Canada's balance of payments position after devaluation, since the level of foreign exchange reserves had not attained a level considered adequate for the country's needs.

Devaluation was preceded by several important inter-government conferences on trade problems. In July meetings were held of Commonwealth Finance Ministers

and of representatives of the United Kingdom, the United States and Canada at London. A further conference of representatives of the three countries just mentioned met at Washington in September. As a result of the latter Conference certain broad principles were laid down, the object of which would be to increase sterling-area exports to the North American continent, thereby helping to close the dollar gap in the external financial position of these countries. One result of this decision has been the establishment of an advisory committee on private overseas investment, composed of 11 business men, to study obstacles which impede the free flow of investment from Canada to overseas countries and the steps that might be taken to eliminate or minimize these obstacles. This committee has a counterpart in the United States in the President's Committee for Financing Foreign Trade.

To help bring about a better balance in its trade with the world's two principal currency areas, the Federal Government has encouraged Canadians to buy sterling-area products and provided assistance to United Kingdom business men to increase their exports to Canada. This has been supplemented by the efforts of private persons. The Dollar-Sterling Trade Board was established in the summer of 1949 to work with the United Kingdom Dollar Export Board in promoting United Kingdom sales in Canada. The Canadian Board is composed of business men, and offers technical advice on the Canadian market to United Kingdom exporters and maintains close liaison with Canadian importers to help them establish contacts with potential United Kingdom suppliers. In January, 1949, a United Kingdom-Canada Continuing Committee on Trade and Economic Affairs was established. The Committee is composed of senior officials of the governments of the two countries. This affords a systematic means of reviewing certain of the problems that arise in joint trade.

As Canada's foreign exchange reserves increased during 1949 and early 1950, it was possible to modify and relax many of the import restrictions imposed under the Emergency Exchange Conservation Act. Among the important changes during 1949 were: the removal from the prohibited import list of such items as meat, poultry, dairy products, miscellaneous foods, cigarettes, oils and greases, lumber and paints; the transfer from the prohibited to the quota list of such items as plumbing fixtures, furniture and hollow-ware; the removal from the quota list of such items as fresh fruits, vegetables, cheese, leather, watches and watch movements; the increasing of quotas by about 25 p.c.; and the increasing of allotments by about 25 p.c. on certain licensed imports of capital and production goods, such as motor-vehicles, ranges, refrigerators, radios and television sets. Two Orders in Council passed in February, 1950, made provision for transferring Switzerland from the list of scheduled to the list of non-scheduled countries and for increasing the textile quota by 10 p.c. on Apr. 1, and for the transfer from the prohibited to the quota list of processed fruits and vegetables and a large number of consumer durable goods on July 1.

When it became necessary to impose import controls in November, 1947, it was also found necessary to 'freeze' the unexhausted portion of the \$1,250,000,000 loan made to the United Kingdom under the Export Credits Insurance Act of 1944. With the improvement of Canada's foreign exchange position, further drawings on this loan at the rate of \$10,000,000 per month were permitted starting in January, 1949.

Canada has maintained commodity and area controls over many exports, to assure supplies of these commodities to the domestic market, to facilitate directing exports to Western European countries under the United States Economic Cooperation Administration program, and for national security reasons. At the end of 1949, 91 items were under export control, 323 had been removed from control during the year, and 11 had been added. Area controls extended to all commodities going to a list of 64 countries. However, to facilitate trade, an open general licence was issued permitting exports to these countries of commodities which Canada was not particularly interested in controlling.

Several international developments in 1949 that may have considerable direct economic significance for Canada in the future are worthy of note. The first was the North Atlantic Treaty, signed in April, 1949. At its second session, in November, 1949, the Council of the North Atlantic Treaty Organization established a Defence Financial and Economic Committee with a permanent working staff of experts located at London. Also in June, 1949, a Joint United States-Canada Industrial Mobilization Planning Committee held its first meeting. The Committee was established to exchange information on problems of mutual interest concerning industrial mobilization planning activities of the two countries. In January, 1950, the first Commonwealth conference on foreign affairs met at Colombo, Ceylon. Although not primarily concerned with economic matters, the Conference established a consultative committee on south and southeast Asia, the primary concern of which is economic development in this region. Arrangements were made for the consultative committee to meet at Sydney, Australia, in May, 1950, with Canada represented. Trade officials were also on the delegation that attended the Colombo Conference and held talks both during and after the Conference with officials in a number of Asiatic countries.

**Domestic Economic Policies.**—An analysis of economic conditions in Canada and abroad early in 1949 indicated a weakening of export prospects and of inflationary pressures. The Federal Government then took steps to offset any serious slackening in demand by reinforcing purchasing power in Canada. The principal means used have already been indicated: personal income tax rates were lowered and exemptions raised, two years payments of the refundable portion of wartime income taxes were paid in one year, indirect taxes on numerous consumer goods and services were reduced, and retroactive grain payments accumulated by the Federal Government in the operation of the four-year United Kingdom wheat contract were disbursed to farmers. Because it was not considered opportune to stimulate increased capital expenditures at a time when the supply of capital goods was tight, no general reductions in corporation taxes were made. Important fiscal measures to encourage resource development were renewed and extended. The Income Tax Act permitted a deduction for income-tax purposes on expenditures on oil, mineral and gas exploration. This was due to expire at the end of 1949 but was extended to the end of 1952. An extra tax credit on expenditures on deep test wells was extended to the end of 1950, and the three-year extension for metal mines was extended to cover mines brought into production during 1950-52. No important tax rate changes were made in the 1950 Budget, but the two above-mentioned extensions of time with respect to oil development were continued for an additional year.

With minor modifications, the Continuation of Transitional Measures Act, 1947, under which the Federal Government exercised certain extraordinary powers to effect an orderly transition to a peacetime basis, was extended into 1950 by

Parliament during 1949, and to Apr. 30, 1951, in 1950. At the time of the renewal of the Act in 1950, it was announced that no further extensions would be requested. On Mar. 31, 1950, the steel and timber controls and the system of building materials priorities were ended as a result of the better supply position of these materials.

There has been a steady and substantial growth of Canadian industry during the post-war period. The greater part of this growth has been brought about by already established firms. Nevertheless, in the period 1945-49 about 600 new businesses each employing over 10 persons and with an annual output in excess of \$50,000 were established in the manufacturing industries alone. Approximately one in four of these businesses were of foreign origin. In 1949, approximately 90 sizable manufacturing businesses were started. These new industries manufacture a great variety of products ranging from diesel electric engines to drilling equipment and from mixed mortar to perfume essence.

Among the industries that started encountering serious difficulties in 1948 were the shipbuilding and merchant shipping industries. To provide work for them, permission was given to sell ships acquired from War Assets Corporation out of Canadian registry on condition that the funds realized, with exceptions, should be applied to replacing the ships with more efficient modern ships built in Canadian yards. The Canadian Vessel Construction Assistance Act, passed in 1949, makes provision for special rates of depreciation for income-tax purposes on vessels constructed or altered in a major way in Canadian shipyards. Also, during 1949, the Government placed orders with Canadian shipyards for the building of a number of naval and other vessels for government departments operating floating equipment. It was announced by the Government late in 1949 that legislation would be introduced in 1950 to provide \$3,000,000 to subsidize the operation for one year of more than 40 vessels remaining under Canadian registry, and to permit the transfer of other ships from Canadian registry under conditions that would assure their being available to Canada and her allies in the event of an emergency.

Agricultural prices supports were extended on the 1948-49 crops of apples in British Columbia and Nova Scotia and of potatoes in New Brunswick and Prince Edward Island. During 1949 and continuing into 1950, the prices of butter, dry skim milk and cheddar cheese were also supported. The maximum funds required for financing the operations amounted to about \$40,000,000, but the net cost after outstanding surpluses are disposed of will probably be less than \$10,000,000. The Fisheries Prices Support Board, to relieve the plight of inland fishermen, purchased some 3,400,000 lb. of their winter catch. In 1948 the Federal Government enacted legislation extending to oats and barley the same powers that the Canadian Wheat Board exercises with respect to wheat. After concurring legislation was passed by the three Provincial Governments concerned, the Board became the sole marketing authority for western oats and barley for the crop year 1949-50.

Assistance has been granted by the Government for many years on the movement of Canadian coal from Eastern and Western Canada to markets in the Central Provinces. During 1949, provision was made by Order in Council P.C. 1094 of Mar. 15 to extend the assistance already available on the movement of coal from British Columbia to export markets other than the United States to cover coal from Alberta. On Apr. 26, Orders in Council P.C. 1653 and 1654 authorized the payment of assistance on the movement by rail of coal from certain types of mines in Nova Scotia and New Brunswick to Quebec at a special rate of 50 p.c. of the freight rate instead of the regular rate of 30 p.c. of the freight. This special provision

was for the summer months only and the assistance expired on Sept. 30. There was during the year a greatly increased movement of Canadian coal to these central markets. Legislation was passed by Parliament in December, 1949, under which loans up to \$10,000,000 could be made to coal producers in the Atlantic Maritime Provinces for the purpose of increasing the efficiency of production.

There has been a substantial immigration into Canada in the post-war period. The earlier movement was composed largely of families of returning war veterans. Later movements were of individuals seeking to establish themselves in a new land and of displaced persons. In 1948 some 125,000 immigrants entered Canada and in 1949 about 95,000. This in-bound movement appears to be on the decline in 1950 as it becomes more difficult to get suitable immigrants and as exchange-control restrictions in European countries place increasing impediments in the way of emigrants. On the other hand, the out-bound movement of Canadians has remained fairly steady in recent years at about 35,000 per annum.

Two Royal Commissions were holding inquiries in 1949 and early 1950. The Royal Commission on Prices, which took over an inquiry originally started in 1948 by the Special Committee on Prices of the House of Commons, reported in March, 1949. A Royal Commission on Transportation was established at the end of 1948 and one on National Development in the Arts, Letters and Sciences in April, 1949.

**Administrative Changes.**—A number of important changes in governmental organization were made during 1949. An important one, the effect of which was to integrate domestic and foreign policy more closely, was the amalgamating of the Cabinet Committees on Economic and Industrial Development, External Trade Policy and Wheat into the Cabinet Committee on Economic Policy. The terms of reference of the Committee are broad and cover economic, financial and trade matters.

The most extensive reorganization was the reallocation of responsibilities of the Departments of Mines and Resources and Reconstruction and Supply among three new departments—Resources and Development, Mines and Technical Surveys, and Citizenship and Immigration. The Department of Resources and Development has duties, powers and functions with respect to forest resources, irrigation projects not under the jurisdiction of other departments, water-power developments, national parks, tourist information and services, housing and the Trans-Canada Highway. The Department of Mines and Technical Surveys is concerned with mines, minerals, explosives and technical surveys in such fields as the mineral development, occurrence and extent of ore-bodies, geography, geology and mineralogy of Canada. It is also concerned with chemical, mechanical and metallurgical research and prepares maps of various kinds. The Department of Citizenship and Immigration is responsible for matters relating to naturalization and citizenship, Indian affairs, immigration and colonization.

In the period following the War the Federal Government established or reorganized a number of semi-independent boards, commissions and Crown companies to discharge various peacetime duties. (See 1948-49 Canada Year Book, pp. xxxiii and 1117-1118.) Two major developments took place in this field in 1949. Enabling legislation was passed to permit the establishment of a Canadian Overseas Telecommunications Corporation under the Minister of Transport. The Corporation is to take over that part of the property and equipment of two companies used in connection with Canada's external communication services by cable, radiotelegraph

and radiotelephone. The second development was with reference to the War Assets Corporation and the Crown Assets Allocation Committee. With their work of disposal of surplus equipment from the war period nearly completed, the Corporation was reconstituted as the Crown Assets Disposal Corporation, to become a continuing disposal agency for government surpluses, while the Committee was disbanded.

### **Federal-Provincial Economic Relations**

There were a number of important developments in relations between the Federal and Provincial Governments during 1949, particularly in the fields of resource development and public investment. The outstanding development, however, was the union of Newfoundland with Canada as a tenth province, on Mar. 31, 1949.

**Canada-Newfoundland Union.**—The long-term significance of the rounding out of Confederation, from the economic point of view, is the political unification of the natural maritime region that exists on Canada's eastern seaboard. For Newfoundland the question of joining or remaining outside Confederation was a serious one. Basically the problem was one of the impact of a matured federal system and an industrially developed economy on a country that had developed its economic pattern independently although the nature of the pattern had been conditioned at many points by close trading ties with the larger economy. The immediate impact of union was generally favourable. The extension of social security benefits to the new province served to augment consumer purchasing power, and the disappearance of Newfoundland tariffs brought about some reduction in the price level. On the other hand, the removal of the tariff weakened the competitive position of Newfoundland manufacturing industries, and a number of these businesses have encountered serious problems in readjusting their production to meet the new situation. In general, the level of activity in Newfoundland was maintained in 1949 at about its 1948 level, the two factors contributing most to this strength being the maintenance and probably slight improvement in the level of exports and the augmenting of personal income through social security benefits. As in other forest areas of Canada, Newfoundland witnessed some cutbacks in woods operations to reduce pulpwood inventories, with a consequent increase in unemployment among woodworkers.

**Resource Development and Public Investment Measures.**—The Federal Government has encouraged resource development by three means. It has encouraged business investment by fiscal incentives, transportation subsidies, credits through the Industrial Development Bank, the finding of new markets, research, the provision of technical services, etc. It has undertaken important joint projects with provinces, a number of which are noted below. Finally, it has influenced the level of investment by the direction and timing of its own investment programs.

A survey of the state of planning of federal works and resource development projects was undertaken. It was found that as of Mar. 31, 1949, there was approximately \$3,000,000,000 of these projects, \$2,750,000,000 of which were of the construction type and \$250,000,000 of the non-construction resource development type. Approximately \$400,000,000 were included in the 1949-50 estimates. Another \$325,000,000 were fully planned, nearly \$1,000,000,000 in various stages of planning, and \$1,300,000,000 were under preliminary examination. Joint projects represented a little over half the \$3,000,000,000 total.\* During 1949 the important items in the resource development and public investment fields were the Trans-Canada Highway, forest development and public assistance to house-building.

\* Department of Reconstruction and Supply Annual Report, 1948-49, pp. 5-6.

Throughout 1949, ministers and officials of the Federal and Provincial Governments worked on the financial, technical and administrative details involved in building a Trans-Canada Highway. Late in 1949, progress had reached the stage where legislation was introduced in and passed by Parliament permitting the Federal Government to enter into agreements with the provinces for a contribution to the construction of the Highway through the provinces. The legislation permitted a dollar-for-dollar contribution on the part of the Federal Government, up to \$150,000,000, for new construction undertaken within seven years or to reimburse provinces for construction already undertaken and included in the Highway, provided the location, standards and the time and method of construction were acceptable to the Federal Government. In April, 1950, six of the ten provinces signed agreements with the Federal Government and negotiations with other provinces were proceeding. An early start on many sections of the proposed road was indicated.

Following several years of consultation with provincial authorities on how the Federal Government could most effectively co-operate with provinces in the orderly development of Canada's forest resources, the Canada Forestry Act was passed late in 1949. This legislation allows the Federal Government to establish national forests, forest experimental areas and forest research laboratories, and to enter into agreements with provinces for the protection, development and utilization of forest resources, and with private persons for economic studies of forest resources, industries or research.

**Housing.**—During the years 1946-49, Canada built over 300,000 new permanent housing units, of which about one-third were constructed with financial assistance from the Federal Government, principally under the National Housing Act. During 1949, the National Housing Act was amended to provide a basis for joint federal-provincial action in the housing field. It made provision for the Federal Government to enter into arrangements with provinces (and municipalities) to undertake projects for the acquisition and development of land for housing purposes and for the construction of houses for sale or for rent. The capital cost of the project and the profits and losses are to be shared 75 p.c. by the Central Mortgage and Housing Corporation on behalf of the Federal Government and 25 p.c. by the provincial government. Other amendments to the National Housing Act make it easier for private individuals to buy new, moderately priced homes by reducing their down-payment requirements, and for co-operatives to finance house-building.

As already mentioned, building materials priorities for certain types of building including veterans housing expired on Mar. 31, 1950. However, the veterans rental-housing program came to an end as 1949 projects were announced to be the last in the series expected to be completed in 1950. This program was to be replaced by federal-provincial housing projects for veterans and civilians alike. On Dec. 31, 1949, provision for double depreciation on rental-housing projects lapsed. This provision made in March, 1947, to encourage construction of rental housing, allowed depreciation at double the rates normally applied for income-tax purposes for the first ten years after the rental unit was built.

Although a number of other important controls were ended early in 1950, rent control was continued. The Federal Government announced that it proposed to discontinue its system of rent controls on Apr. 30, 1951, when the Transitional Measures Act is due to expire. The provincial governments were advised to this effect and an offer of assistance in preparing stand-by legislation was made to

them by the Federal Government. Before a decision to continue rent control was taken, the constitutionality of the Federal Government's position was tested before the Supreme Court of Canada; the rule confirmed its right to be in the field because an emergency existed.

**Social Security.**—The two important extensions of social security provisions in 1949 and early 1950 related to family allowances, old age pensions and unemployment insurance. The three-year-residence-in-Canada rule for qualifying a child for the allowance was reduced to one year, and the provision that decreased rates of allowances be given for fifth and additional children was dropped. With respect to old age pensions, the Federal Government agreed to contribute three-quarters of the amount of pension paid up to a maximum of \$40, an increase of \$10 in the basic rate.

Important changes were made in unemployment insurance legislation in February, 1950. The most significant change was the provision of supplementary benefits in the first three months of each calendar year for insured workers who have exhausted their benefits, have not sufficient contributions to qualify, have recently been brought within the scope of unemployment insurance but have not yet qualified or who are lumbermen and loggers with 90 days of employment in their occupation in any 12-month period in the 18 months preceding the making of a claim. Supplementary benefits are paid at 80 p.c. of the normal unemployment benefit. Other changes in the Act effected in 1950 were a widening of coverage to include persons earning between \$3,120 and \$4,800 and all lumbermen and loggers, increasing insurance contributions and benefits and raising permissive earnings while unemployed from \$1.50 to \$2 per day.

Also, during 1949, the health grants program announced in 1948 made steady progress. The annual grants presently amount to about \$30,000,000 per year, not all of which is as yet being expended owing to the time required to develop the services. The grants cover ten types of health activities and are contingent on provinces making specific outlays in the various fields covered. Up to the end of 1949 over 1,500 projects had been dealt with under the program.

**Federal-Provincial Conferences.**—Federal-provincial co-operation exists over a much wider front than is indicated in the topical fields mentioned above. It is possible that important developments will take place in 1950. A constitutional conference of Federal and Provincial Governments was held in January, 1950, at which it was agreed to appoint a standing committee to investigate certain constitutional problems and that the conference should later reassemble to determine a procedure to amend the British North America Act. It has also been announced that a general conference of these Governments will be held in the autumn of 1950. At this time, it is expected, many matters concerning the relations between the Government in the economic sphere, as well as other problems, will be brought under review.

## PART I.—GEOGRAPHY\*

**Main Geographical Features.**—Canada comprises the whole northern part of the North American Continent with its islands, except the United States territory of Alaska. It embraces the whole Arctic Archipelago between Davis Strait and the connecting waters northward to the 60th meridian on the east and the 141st meridian on the west.

Canada is bounded on the west by the Pacific Ocean and Alaska; on the south by the United States; on the east by the Atlantic Ocean, Davis Strait and the dividing waters between Ellesmere Island and the Danish territory of Greenland; northward it extends to the North Pole.

The southernmost point is Middle Island in Lake Erie, in north latitude 41°41'. From east to west Canada extends from west longitude 52°37', Cape Spear, Newfoundland, to west longitude 141°, the boundary of Alaska. Canadian territory thus extends over 48° of latitude and 88° of longitude.

The area of Canada is 3,845,144 square miles, a figure that may be compared with that of 3,608,787 square miles for Continental United States and Alaska; 2,095,062 the total area of Europe; 2,974,581 the area of Australia; 3,275,510 the area of Brazil; 1,581,410 the area of the Dominions of India and Pakistan (excluding Burma); 88,807 the area of Great Britain. Canada's area is about 27 p.c. of the total area of the British Commonwealth.

\* Revised by the Department of Mines and Resources, Ottawa.

The sea coast of Canada, one of the longest of any country in the world, comprises the following mileages:—

Mainland—Atlantic 6,111, Pacific 1,579, Hudson Strait 1,245, Hudson Bay 3,157, Arctic 5,771; total 17,863 miles.

Islands— Atlantic 8,677, Pacific 3,979, Hudson Strait 60, Hudson Bay 2,307, Arctic 26,786; total 41,809 miles.

The Canada-United States Boundary is 3,986·8 miles long and that between Canada and Alaska is 1,539·8 miles.

The St. Lawrence-Great Lakes system of navigable waterways provides ship transportation from the sea into the very heart of the continent. From the Strait of Belle Isle at the northern entrance to the Gulf of St. Lawrence, the sailing distance to the head of Lake Superior is 2,338 miles; from Montreal, Que., to Fort William, Ont., the great Canadian grain-shipping port, the distance is 1,215 miles. Throughout its length the waterway gives access to a region rich in natural and industrial resources.

These inland waterways are of great benefit to Canada since modern canal systems by-pass the unnavigable portions of the St. Lawrence River, link up the various bodies of water of the Great Lakes and have a great economic influence on the wealth and progress of the nation. There are no tides in these Lakes although considerable variation in water levels is sometimes occasioned by strong winds or heavy precipitation. At the Great Lakes ports and harbours, ships load and unload their cargoes to and from all points in Canada.

## Section 1.—Physical Geography

The physical features of Canada are considered under this heading in the six natural divisions into which the country is divided, as shown on the map, p. 4.

(1) The Appalachian Region, comprising the Maritime Provinces (including the Island of Newfoundland) and most of that part of Quebec lying south of the St. Lawrence River, is a hilly or mountainous region and is made up largely of disturbed beds.

(2) The St. Lawrence Region, a lowland belt bordering the St. Lawrence River and extending westward through southern Ontario to Lake Huron, is underlain chiefly by flat or gently dipping strata of Palæozoic age.

(3) The Canadian Shield is a vast V-shaped area of ancient rocks surrounding Hudson Bay, and includes Labrador.

(4) The Interior Plains Region of Manitoba, Saskatchewan, and Alberta stretches down Mackenzie Valley to the Arctic Ocean and is underlain by only slightly disturbed Palæozoic and Mesozoic strata.

(5) The Cordilleran Region, including the mountainous country of the Pacific Coast, is developed on highly disturbed rocks.

(6) The Arctic Archipelago, with which is linked the Hudson Bay Lowland, includes the islands lying north of the Canadian Shield, and a broad, flat region, underlain by flat-lying Palæozoic beds, along the southern shore of Hudson Bay.

The physiographic details and geology of each division described above are given at pp. 19-29 of the 1947 edition of the Year Book.

Special articles on the Physical Geography of the Canadian Eastern Arctic and the Physical Geography of the Canadian Western Arctic appear at pp. 12-19 of the 1945 Year Book and pp. 9-18 of the 1948-49 edition, respectively.

### Subsection 1.—Hydrographical Features

The hydrographical features of Canada are described in detail at pp. 3-12 of the 1947 edition of the Year Book.

### Subsection 2.—Lakes and Rivers

The fresh-water area of Canada is unusually large constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes, details concerning which are given in Table 2. These lakes, with the St. Lawrence River, form the most important system of waterways on the continent and one of the world's most notable fresh-water transportation routes.

## 2.—Areas, Elevations, and Depths of the Great Lakes

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles
Superior .....	602.23	383	160	1,302	31,820	11,200
Michigan .....	580.77	321	118	923	22,400	—
Huron .....	580.77	247	101	750	23,010	13,675
St. Clair .....	575.30	26	24	23	460	270
Erie .....	572.40	241	57	210	9,940	5,094
Ontario .....	245.88	193	53	774	7,540	3,727

Lake Superior, with an area of 31,820 square miles, is the largest body of fresh water in the world. The International Boundary between Canada and the United States passes through the waters of Lakes Superior, Huron, St. Clair, Erie and Ontario. The great obstacle to navigation on this waterway—the rise of 326 feet between Lakes Ontario and Erie—is surmounted by the Welland Ship Canal; the Niagara River dropping over the escarpment at Niagara creates the famous Niagara Falls. In addition to the Great Lakes there are many other remarkably large lakes; the following twelve, with their areas in square miles in parentheses, are

all over 1,000 square miles in area: Great Bear (12,000), Great Slave (11,170), Winnipeg (9,398), Athabaska (3,058), Reindeer (2,444), Winnipegosis (2,086), Nipigon (1,870), Manitoba (1,817), Dubawnt (1,600), Lake of the Woods (1,346), Lake Melville (1,132) and Southern Indian (1,060). Apart from these, named as notable for their size, there are innumerable other lakes scattered all over that major portion of the area of Canada lying within the Canadian Shield. In an area of 6,094 square miles, accurately mapped, just south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 square miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

### 3.—Areas and Elevations of Principal Lakes, by Provinces

NOTE.—In the case of those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

[illegible]

<sup>1</sup> Areas of Newfoundland lakes are approximate areas, miles).

<sup>2</sup> Excludes Glover Island (71.7 sq.

The river systems of Canada, excluding those of the Arctic Archipelago, are best studied by segregating the main drainage basins as shown in Table 4.

## 4.—Drainage Basins, 1949

<b>Total.....</b>	<b>1,379,160</b>		

<sup>1</sup> Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory. Newfoundland is included in the Atlantic Basin and in the total for Canada.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of Western Canada, but otherwise the rivers of the West, east of the Rockies run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie, which drains Great Slave Lake is, with its headwaters, the longest river in Canada (2,514 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik in the delta of the

Mackenzie, a distance of 1,292 miles. In Eastern Canada, the Great Lakes and St. Lawrence drainage basin dominates all others and has undergone the greatest development. The St. Lawrence River and the Great Lakes provide a water route from the Atlantic as far as Fort William and Port Arthur, Ont., twin cities situated on Lake Superior and only 419 miles from Winnipeg, Man., the half-way mark in distance across Canada. The main tributaries of the St. Lawrence all flowing south (most of which have lakes available for reservoiring), together with the main river itself, have developed and undeveloped water powers the economic value of which it would be difficult to over-estimate. Apart from the plains region of the West, the rivers of Canada have a vast power potentiality well distributed over the country. Table 5 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

### 5.—Lengths of Principal Rivers and Tributaries

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

River	Length miles	River	Length miles
<b>Flowing into the Atlantic Ocean</b>		<b>Flowing into Hudson Bay</b>

## Subsection 3.—Mountains

The predominant orographical feature in Canada is the great Cordilleran Mountain System. The principal named peaks exceeding 11,000 feet in elevation all lie within that system and are listed at pp. 7-8 of the 1948-49 edition of the Year Book.

## Subsection 4.—Islands

The islands of Canada are among its most remarkable geographic features. They include the very large group lying in the Arctic Ocean, the fringe of both large and small islands off the Pacific Coast, the islands fringing the coast of Labrador, those of the Maritime Provinces and Quebec in the Atlantic Ocean and in the Gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. The Pacific Coast islands, with the exception of Vancouver Island and the Queen Charlotte group, are small and dot the coast of British Columbia from Dixon Entrance to the southern boundary of the Province. Vancouver Island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte Islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West and, together with the bold and deeply indented coast line, provide a region for superb scenic cruises.

On the eastern coast of Canada are the numerous small, rocky islands lying off the coast of Labrador, the island provinces of Newfoundland and Prince Edward Island, the islands of Cape Breton (an integral part of Nova Scotia), Anticosti, and the Magdalen group (included in the Province of Quebec), and the islands of Grand Manan and Campobello (part of the Province of New Brunswick) in the Bay of Fundy. Newfoundland is 42,734 square miles in area, Prince Edward Island 2,184 square miles, Cape Breton 3,970 square miles and Anticosti 3,043 square miles. Fishing activities in these eastern islands are important, while agriculture on Prince Edward Island and mining on Cape Breton are the chief occupations of the inhabitants.

Manitoulin Island, area 1,068 square miles, the Georgian Bay islands in Lake Huron, and the Thousand Islands group in the St. Lawrence River at its outlet from Lake Ontario, are the more important islands of the inland waters.

Table 6 gives the principal islands in Canada having an area of over 2,000 square miles.

## Section 2.—Political Geography

Politically, Canada is divided into ten provinces and two 'territories'. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act (see pp. 40-60 of the 1942 Year Book), and as new provinces have been organized they have been granted political status equivalent to that of the original provinces. Yukon and the Northwest Territories with their boundaries of to-day are administered by the Federal Government. The characteristics of each of the provinces and of the 'territories' are reviewed below.

**Newfoundland.**—The Island of Newfoundland lies across the Gulf of St. Lawrence and is the most easterly part of Canada. It is separated from the coast of Labrador by the Strait of Belle Isle, 11 miles across at its narrowest point, and from Cape Breton Island by Cabot Strait, 70 miles wide. It is triangular in shape, the three sides about 320 miles in length, and has an area of 42,734 square miles. The dependency of Labrador is on the mainland with an area of 112,000 square miles.

Newfoundland enjoys a temperate climate with cool summers, mild winters and evenly distributed rainfall. The climatic conditions of Labrador are more severe.

The island is a plateau of low, rolling relief, with its highest elevations in the west where summits in the Long Range Mountains exceed 2,500 ft. Much of the surface is barren and rocky with innumerable ponds and swamps, and there is little land suitable for farming. The river valleys and the west coast are thickly forested and support a thriving wood-pulp industry. The deeply indented coast line has many harbours providing safe anchorage for the fishing vessels which support the important fishing industry. Fishing, mainly for cod, is carried on along the coasts of Newfoundland and Labrador and on the Grand Banks. Both New-

foundland and Labrador have extensive mineral deposits. Iron ore is mined on Belle Island and lead-zinc-copper ore at Buchans in the interior. The vast iron-ore and water-power resources of Labrador are as yet undeveloped (see Article on "The Iron-Ore Resources of the Quebec-Labrador Region", Chapter XV).

**Prince Edward Island.**—This, the smallest province of Canada is about 120 miles in length, with an average width of 20 miles and has an area of 2,184 square miles. It lies just off the coast east of New Brunswick and north of Nova Scotia and is separated from both provinces by Northumberland Strait, from 10 to 25 miles wide.

The Island is almost trisected by the deep indentations of Malpeque Bay, north of the town of Summerside, and by the mouth of the Hillsborough River at Charlottetown, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the Island attains a greater altitude than about 450 feet above sea-level. The climate, tempered by the surrounding waters of the Gulf of St. Lawrence and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its relative predominance in the fox-farming industry, its lobster canneries, oyster beds, and the production of seed potatoes.

**Nova Scotia.**—The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of about 21,068 square miles (see p. 2). The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto; the Island of Cape Breton forms the northeast portion. The latter is separated from the mainland by the narrow Strait of Canso and includes the famous salt-water Bras d'Or Lakes.

Nova Scotia is one of the leading provinces in the production of coal. The coalfields are bituminous, of good quality, well adapted to the production of coke and excellent for domestic use and for steam-raising purposes. The chief coal-fields are at Sydney and Inverness on Cape Breton Island, and at Pictou and Cumberland on the mainland.

On the Atlantic side, the mainland is generally rocky and open to the sweep of Atlantic storms; it is deeply indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province (see Chapter XIV). The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low mountainous ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the Atlantic side, they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

**New Brunswick.**—New Brunswick is nearly rectangular in shape with an area of 27,985 square miles and may be compared in size to Ireland (26,600 square miles). The Bay of Chaleur on the north, the Gulf of St. Lawrence and Northumberland Strait on the east, the Bay of Fundy on the south, and Passamaquoddy Bay on the southwest, provide the Province with a very extensive sea-coast. It adjoins the State of Maine on the west and the Province of Quebec on the north and northwest.

The conformation of New Brunswick is, in general, undulating, but to the east it attains its highest elevation of 2,690 feet in the vicinity of Grand Falls on the St. John River. In the northeastern half of the Province there are extensive areas

of Crown lands carrying valuable stands of merchantable timber. Numerous rivers provide access to the extensive lumbering areas and to attractive hunting and fishing resources. The Province is watered to the west and south by the St. John River, which, in its course of 400 miles, runs through country famed for its distinctive beauty.

While the forest resources are of first importance economically, large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains near the coast. Natural gas and petroleum are obtained in limited quantities and coal mining on a moderate scale is carried on in the Minto Basin at the head of Grand Lake.

**Quebec.**—Quebec is the largest province of Canada and occupies the area of British North America east of Hudson Bay, with the exception of Newfoundland (including the Coast of Labrador) and the other Maritime Provinces. It has an area (see p. 2) of 594,860 square miles, equal to the combined areas of France, Germany and Spain, but a large part of the surface is made up of Precambrian rocks of the Canadian Shield, which renders it unsuitable for agriculture. The Gulf of St. Lawrence and the River St. Lawrence penetrate the entire width of Quebec and divide the Eastern Townships and the Gaspé Peninsula to the south from the larger area of the Province to the north. North of the St. Lawrence the land takes the form of a ridge parallel to the river and rises from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet from which it descends gently to sea-level at Hudson Bay and Hudson Strait.

With the exception of the treeless zone, extending north of latitude 58°, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive timber limits, which form the basis of a great pulp and paper industry (see Chapter XII), Quebec is the foremost of the provinces in the development of hydro-electric power (see Chapter XVI) and has available water-power resources, at ordinary minimum flow, almost equal to those of Ontario and Manitoba combined. Its asbestos deposits have long been known for their quality and extent. Extensive developments of gold and copper have taken place in the western part of the Province and the mineralized area is being extended year by year. Quebec is in second place in mineral production among the provinces of Canada (see Chapter XV). Its fisheries in the St. Lawrence River and Gulf are an important resource. The climate and soil of the upper St. Lawrence Valley and of the Eastern Townships are well suited to general farming operations, including dairying and the production of vegetables on a commercial basis.

**Ontario.**—Lying between Quebec on the east and Manitoba on the west, Ontario is usually regarded as an inland province but its southern boundary has a fresh-water shore line on the Great Lakes of 2,362 miles while its northern limits have a salt-water shore line of 680 miles on Hudson and James Bays. There is a tidal port at Moosonee at the southern end of James Bay. The most southerly point in the Province is Middle Island at 41° 41' N. latitude (this is also the most southerly point in Canada) and the most northerly latitude of the Province is 56° 50'. It has an area of 412,582 square miles.

As in Quebec, the surface of Ontario follows the conformation characteristic of the Precambrian Shield except in the Ontario Peninsula where the surface is low and level. The highest point in Ontario is 2,120 feet, on the promontory at the

northeastern corner of Lake Superior. Northwest from the Height of Land, the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea-level.

Mining is a very important industry in the wide-spread Precambrian area; as in the adjoining Province of Quebec, Ontario is lacking in native coal but is rich in other minerals and contributes almost one-half the total mineral production of Canada. Gold, silver, nickel, copper, zinc, magnesium, dolomite, gypsum, salt and other minerals are mined commercially. Petroleum and natural gas are also produced on an important scale in the Ontario Peninsula (see Chapter XV).

The geographic position of Ontario on the Great Lakes waterways system permits coal to be transported economically from Pennsylvania and iron ore from Minnesota to provide the basis of a large iron and steel industry. There is a rich iron-ore development in the Steep Rock district west of Port Arthur and an abundance of natural resources has made Ontario the foremost industrial province of Canada (see Chapter XVII).

Possessed of excellent soil and a wide variety of climate, general farming is carried on extensively. In the Niagara Belt, fruit farming has been scientifically developed and is a highly specialized industry throughout the Ontario Peninsula.

Vast forest resources in proximity to hydro power (see Chapter XII) are the basis of large wood-using industries and the forests of the north are a rich fur preserve.

**Manitoba.**—Manitoba, covering 246,512 square miles, is roughly the size of France and is the most central of the provinces. Together with the Provinces of Saskatchewan and Alberta it constitutes the famous Prairie Belt or Interior Plain section of Canada—world renowned for the quality of its wheat.

The Province has a considerable area of prairie land but is also a land of wide diversity combining 400 miles of sea-coast (on a rocky belt along its northeastern boundary, bordering Hudson Bay); great areas of northern mixed forests; large lakes and rivers covering an area of 26,789 square miles; a belt of treeless prairie extending to the southeastern corner of the Province; and patches of open prairie overlain by very fertile soil of great depth. The surface of the Province as a whole is comparatively level, the average elevation being between 500 and 1,000 feet; the greatest height of 2,727 feet is Duck Mountain northwest of Lake Dauphin.

About three-fifths of the Province, east and north of Lake Winnipeg, is underlain with Precambrian rock in which the presence of rich deposits of base metals has been confirmed, as in Ontario and Quebec (see Chapter XV).

The Province, although regarded as basically agricultural, possesses a wealth of water-power resources (Manitoba ranks after Quebec, Ontario and British Columbia in this respect) that, together with mineral and forest riches, have brought about an expanding industrial development.

**Saskatchewan.**—Saskatchewan lies between Manitoba and Alberta extending, like each of the Prairie Provinces, from the International Boundary on the south to the 60th parallel of latitude which divides it from the Northwest Territories. It has an area of 251,700 square miles.

The northern half of the Province is abundantly watered by lakes and rivers and the topography is one of low relief. The Precambrian Shield, which covers most of Quebec, Ontario and Manitoba, penetrates over the northern third of Saskatchewan and has given evidence of potential richness of mineral wealth. This area is

also rich in timber resources while the southerly two-thirds of the Province is generally fertile prairie with soil of great depth. In normal years there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops.

**Alberta.**—This Province, covering 255,285 square miles, lies between Saskatchewan and the Rocky Mountains. Like Saskatchewan, the southern part of the Province is in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie. This gives way to mixed forests covering the more northerly parts. The Precambrian rocks enter Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the Province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace River, that has already resulted in the extension of settlement farther north than in any other part of Canada; and (2) the wonderful grazing lands in the foothills district which, rising sharply on the west, commence the ascent that continues to the very peaks of the Rocky Mountains. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half, the slope descends until elevations of well under 1,000 feet are reached at Lake Athabaska in the northeast corner.

Alberta has the most extensive coal resources of any of the provinces and has become the leading producer of petroleum and natural gas. The Turner Valley and Leduc fields produce the bulk of Canadian oil; other fields such as Lloydminster, which is partly in Saskatchewan, Redwater and Princess are also being developed. Lumbering is important in the more mountainous western parts and in the north, but ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and, in these areas, a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains that form the western boundary of the Province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the Chinook winds.

The coal and oil resources have provided the basis of an industrial development and Edmonton has become the railhead for the north country.

**British Columbia.**—British Columbia, the third largest and the most westerly province of Canada, includes many islands of the Pacific, notably the Queen Charlotte Islands and Vancouver Island, the area of the latter being about 12,408 sq. miles. The total area of the Province is 366,255 sq. miles.

The predominant feature of the Province is the parallel ranges of mountains that cover all except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Generally the agricultural areas of these valleys are relatively small and broken but there are two large areas in the Peace River Block and the Stuart Lake District that are rich and have great agricultural possibilities. The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and has wonderful scenic aspects.

The wealth of forest resources supports the lumbering and pulp and paper industries and places British Columbia first among the provinces in the production of lumber and timber (see Chapter XII). The Province excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. Production of the metals, gold, copper, silver, lead and zinc has played an important role in the economic life of the Province since its early days, while valuable coal deposits on Vancouver Island, and at Crowsnest and Fernie in the interior, have been worked for many years. In regard to water-power resources, British Columbia ranks after Quebec and Ontario (see Chapter XVI).

**Yukon and the Northwest Territories.**—North of the Western Provinces the Territories extend over an area of 1,511,979 square miles. This is largely an undeveloped domain, and for administrative purposes is divided into Yukon Territory and the Northwest Territories: the latter is subdivided into three Provisional Districts. This vast area is over twelve times the area of the British Isles and about one-half the area of the United States. Great rivers, like the Mackenzie and the Yukon, are found there, and large inland bodies of water, such as Great Slave and Great Bear Lakes. There are many indications of mineral wealth; a number of rich gold-bearing deposits are under development and many prospects are being investigated in the Yellowknife area. The radium mines of Great Bear Lake yield the only radium produced on the Continent.

The Alaska Highway, completed in 1943, links Yukon, through Edmonton, Alta., and cities of the Prairie Provinces with the United States. Airports and other facilities have been provided over wide sections of the Mackenzie Valley and Yukon, and travel and transport by air will, undoubtedly, have a great influence on the development of the Territories. Details regarding the resources and administration of these areas are given in Chapter XXIX.

## PART II.—GEOLOGY

For the latest material published under this heading see the 1947 edition of the Year Book, pp. 19-29. Reference to earlier articles will be found at the front of this edition.

## PART III.—GEOPHYSICS

Material on Gravity, Seismology and Terrestrial Magnetism will be found at pp. 18-27 of the 1948-49 edition of the Year Book.

## PART IV.—FAUNA AND FLORA

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## PART V.—LANDS, PARKS AND GAME RESOURCES

Canada is a comparatively new country with resources that are, for the most part, in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. Nevertheless, much

effort has been directed to conservation in the cases of those resources that admit of such methods. Details of such policy are given in the chapters dealing with the individual resources.

Numerous surveys and investigations of the extent and value of the resources have been made from time to time and the results have been reviewed in special publications. Detailed information regarding individual natural resources will be found in the later chapters. The treatment of resources considered below is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. A classification of lands resources, information on the National Parks and game resources and regulations fall properly under this head.

### Section 1.—Lands Resources

The figures of Table 1 show how the land area is classified as between present and potential agricultural lands, present and potential forested lands, and lands that are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of forested lands there is, of course, duplication to the extent of the agricultural lands under forest. The figures regarding agricultural lands are based on estimates from the Decennial Census of 1941 for all but the Prairie Provinces, the 1946 Quinquennial Census being used for Manitoba, Saskatchewan and Alberta. The Dominion Forest Service supplies figures on forested lands and the Surveyor General and Chief of the Surveys and Engineering Branch those on the total land areas of Canada and the Provinces. Figures for Newfoundland are those of the 1945 Newfoundland Census.

#### 1.—Land Area, Classified as Agricultural, Forested or Unproductive

NOTE.—Land area is shown classified by tenure in Chapter XXIX.

<sup>1</sup> Island of Newfoundland only, 1945 Census.<sup>2</sup> These totals present agricultural land of all classes and land that has agricultural possibilities in any sense.<sup>3</sup> Total agricultural land plus forested land minus forested agricultural land.<sup>4</sup> Includes open muskeg, rock, road allowances, urban land, etc.<sup>5</sup> The figures given are strictly estimates.<sup>6</sup> 1946 Census data.<sup>7</sup> Includes 4 sq. miles of occupied land in Yukon and the Northwest Territories.<sup>8</sup> An estimate from provincial sources places the total area of land suitable for tillage at 6,626 sq. miles.<sup>9</sup> Includes the Island of Newfoundland but not Labrador.<sup>10</sup> Does not include the Province of Newfoundland.

## Section 2. Parks and Other Areas under the Federal District Commission

The Federal District Commission, known as the Ottawa Improvement Commission previous to 1927, was established by Parliament in 1899 for the beautification and improvement of the city of Ottawa, Canada's Capital, by the construction and maintenance of parks and driveways.

In 1927 the scope of the Commission's operations was widened to include the adjoining districts, and its membership increased from eight to ten, including a representative of the city of Hull, Que. Subsequently the Commission was given the additional responsibility of maintaining the grounds of all Federal Government Buildings in Ottawa and vicinity. By amendment to the Federal District Commission Act, 1946, the membership of the Commission was increased to nineteen, thus providing for a more national character in its composition by the provision for inclusion therein of a representative from each of the provinces of Canada.

Departments of the Federal Government from time to time ask the Commission to carry out improvements to the grounds of newly constructed Government buildings on the basis of full reimbursement for the actual costs entailed. The Commission has the trained personnel and the special equipment required for such work.

Funds for the purposes of the Commission are provided by statutory grants and votes of Parliament.

In the cities of Ottawa and Hull and immediate environs, an area comprising 1,878 acres is administered by the Commission and eighteen parks have been developed. In addition, the large and beautiful area known as Gatineau Park, described under a separate heading below, has been established in the Laurentian Hills. Twenty-two miles of landscaped driveways have been built and are being maintained.

**Gatineau Park.**—Gatineau Park, situated in the Province of Quebec about eight air miles from the Federal Capital, is the only National Park administered and controlled by the Federal District Commission. It comprises at present about 24,000 acres of wooded hills, valleys, lakes and streams located in the southerly fringe of the Laurentians, the oldest mountains in Canada, and is being preserved in its natural state for the enjoyment of the public.

The Park is a game sanctuary. Deer, bear, fox, beaver, mink, raccoon and other fur-bearing animals are quite numerous. Well-located trails, picnic spots and camping sites have been provided for the pleasure and healthful recreation of the public. Gatineau Park furnishes excellent opportunities for the enjoyment of skiing and is the principal centre in the Ottawa district for this popular winter sport.

Further development of this area is planned which will include an addition of 26,000 acres, overnight cabins, administration buildings, shelters, refectories, bath-houses and other essential structures.

The Park is administered by a Superintendent and a force of five rangers who act also as game wardens, police constables and fire guards.

**The National Capital Plan.\*** The Master Plan to guide the long-range development of Ottawa and the 900-square mile National Capital District and to create a Capital in keeping with Canada's achievements and status as a

\* Prepared by the Federal District Commission, Ottawa.

nation, was completed at the end of 1948. A preliminary report by Jacques Greber, of Paris, noted French city planner and consultant to the Canadian Government on the project, was forwarded to the Government through the National Capital Planning Committee and the Federal District Commission and tabled in the House of Commons on Apr. 30, 1949.

In addition to meeting the present and future needs of a National Capital with its governmental, diplomatic, cultural and tourist requirements, the Master Plan provides a solution to the present town-planning problems of Ottawa which, with Hull, is the centre of an urban area of approximately 250,000 inhabitants. The plan makes provision for an ultimate maximum population of between 500,000 and 600,000 within a five-mile radius of the Parliament Buildings.

The Plan proposes that the ultimate limits of the urban area be surrounded by a "green belt", a strip of land three to five miles wide zoned for agricultural use and as permanent open space. In addition to preventing uncontrolled, uneconomic expansion and undesirable ribbon development along highways, the green belt will provide a lasting source of farm and market-garden produce close to the urban population.

Careful consideration is given to the expanding needs of government, and sites are proposed for future public buildings and institutions. These include a National Institute of Fine Arts to re-house the National Gallery and provide space for a national theatre, national botanical and zoological gardens, a national sports centre, an auditorium capable of seating 10,000 persons and suitable for national and international gatherings, and a national library. New buildings on appropriate sites are proposed for the Dominion Bureau of Statistics, the Department of Veterans Affairs, the Government Printing Bureau, the National Film Board and the Department of National Defence. Where practical, new departmental buildings are located away from the centre of the city to avoid traffic congestion and to enable government employees to live near their work.

The development of downtown Wellington Street on which the Parliament Buildings are located is given particular attention, and the siting and architectural style of new buildings is designed to enhance the magnificent panoramic view of the skyline of the Capital which is obtained from the Quebec side of the Ottawa River.

The Plan proposes extensive development of the National Capital District, 536 square miles of which lie in the Province of Quebec and 364 square miles in the Province of Ontario. Long known as the summer and winter playground of the Capital, the District (particularly the Gatineau region of Quebec) is one of the most attractive tourist areas on the continent.

After nearly 100 years of uncontrolled industrial, commercial, transportation and residential development without regard for economic expansion or future needs, or for its requirements as a capital, the Capital's basic planning problems are to be solved by a series of comprehensive, long-range re-planning projects. The most important of these is the relocation of railways and industries. The present network of railway lines with their attendant yards and services, which now occupies valuable downtown land, interferes with the free flow of traffic and has caused the development of blighted and depressed areas throughout the city, is to be relocated in a belt around the south and east edges of Ottawa and north and west sides of Hull. New and established industries requiring rail services which are now scattered throughout the built-up areas with no room for

further expansion are to be re-located or established in industrial areas along the new rail belt. The Federal District Commission has acquired about 2,000 acres of land for future industrial areas.

Abandoned railway rights-of-way throughout the city will form the basis of a new arterial road system which will link with and extend the present 22-mile Federal District Commission Driveway System and provide a permanent solution to the Capital's traffic circulation problems. Much of the re-planning is expected to pay for itself through the increase in land values and the considerable saving which will result from unhampered traffic facilities.

Execution of the Capital Plan is based on the co-operation of the municipalities concerned and of the Provinces of Ontario and Quebec. The Federal Government, through the Federal District Commission, will be responsible for carrying out those parts of the Plan that are of a national character and are beyond the needs and resources of Ottawa, Hull and the 28 other municipalities in the District. Costs will be met out of the National Capital Fund, established by Parliament in 1948 with an initial grant of \$2,500,000.

Proposals of an urgent nature will be carried out over the next few years according to a schedule of operations. Others, of a more long-range character will be executed gradually over the next half century as the resources of the nation permit.

### Section 3.—National and Provincial Parks

**National Parks.\***—The National Parks are dedicated to the benefit, education and enjoyment of the people of Canada and are maintained by the Federal Government as a means of preserving regions of outstanding natural beauty and national interest. These parks provide remarkable opportunities for recreation, relaxation and nature study. Differing widely in character and purpose, they include scenic and recreational parks situated from the Atlantic Coast to the Rocky and Selkirk Mountains; the national wild animal parks—areas set aside primarily for the protection and propagation of species once in danger of extinction; and the national historic parks. The administration of the parks is directed by the National Parks Service of the Lands and Development Services Branch, Department of Mines and Resources. Maintenance of the park areas is carried out by the respective Park Superintendents and their staffs, and major developments by the Engineering Service. Also under the supervision of the National Parks Service are the historic sites of national importance that have been acquired throughout the country (see pp. 78-90 of the 1938 Year Book).

In the National Parks all wildlife is rigidly protected and, as far as possible, primal natural conditions are maintained. Biological conditions in park waters are under constant scientific supervision, and modern management procedures, including stocking and transfer of game fish, used to maintain or improve angling. Opportunities for outdoor life and recreation have been increased by the provision of equipped camp-grounds, bath-houses, and children's playgrounds, as well as golf courses, tennis courts, bowling greens, hot mineral-spring swimming pools and winter sports facilities. Accommodation is provided in many of the parks by modern hotels, bungalow cabins and chalets operated by private enterprise. Rail, air and highway transportation systems serve the parks, and more than 700 miles

\* Prepared under the direction of R. A. Gibson, Director, Lands and Development Services Branch, Department of Mines and Resources, Ottawa.

of park highways and 2,800 miles of trails have been built to provide access to outstanding scenic regions. To assist in forest conservation and other aspects of park administration 1,250 miles of telephone lines have been constructed. A number of these lines link fire lookout towers and warden's cabins with park headquarters, and in some of the parks two-way radio equipment is used to maintain communication between headquarters and actual fire-fighting operations.

*Scenic and Recreational Parks.*—The scenic and recreational parks include regions of superb beauty and grandeur in the Rocky and Selkirk Mountains of Western Canada. Among these are: in Alberta, Banff, Jasper, and Waterton Lakes National Parks, on the eastern slope of the Rockies; in British Columbia, Kootenay and Yoho, on the western slope of the Rockies and Glacier and Mount Revelstoke National Parks in the Selkirks. While these parks bear a general resemblance to one another, each possesses distinctive characteristics and phenomena, fauna and flora, and types of scenery. Banff and Jasper Parks contain the famous holiday resorts Lake Louise, Banff, and Jasper. Direct connection between these parks is provided by the Banff-Jasper Highway, one of the notable scenic mountain highways in the world.

Eastward from the mountains are Prince Albert National Park in Saskatchewan, a typical example of the forest and lake country bordering the north-western plains region; and Riding Mountain National Park in Manitoba, a well-timbered area dotted with numerous lakes, at a general altitude of 2,000 feet above sea-level. In Ontario there are three small parks established primarily as recreational areas. They are Point Pelee, Georgian Bay Islands, and St. Lawrence Islands National Parks.

In the Maritime Provinces, three remarkable areas have been established as National Parks. Cape Breton Highlands National Park, situated in the northern part of Cape Breton Island, N.S., has an area of 390 square miles. Its rugged and picturesque shore line, indented by numerous bays and coves, and its rolling mountainous interior provide a delightful setting reminiscent of Scotland. Girdled on its eastern, northern, and western sides by a modern highway called the Cabot Trail, and possessing such features as trails, beaches, tennis courts, and golf links, the park offers many diversions to the visitor. Prince Edward Island National Park, containing an area of seven square miles, extends a distance of about 25 miles along the northern shore of the island province. Its chief attractions are magnificent sand beaches which invite ocean bathing under ideal conditions. The park also contains "Green Gables", the farmhouse made famous by the novels of L. M. Montgomery. Well maintained golf links, tennis courts, bowling greens, campgrounds, and marine drives enhance its attractions. Fundy National Park was established in New Brunswick in 1947 and has an area of nearly 80 square miles. It is situated mainly in Albert County and lies between the Goose and Upper Salmon (Alma) Rivers. It extends northward from the Bay of Fundy for a distance of about nine miles. Development is under way including the provision of facilities for tourist accommodation and recreation.

*Wild Animal Parks.*—While all National Parks are wild animal sanctuaries, two are maintained primarily for the protection of big game species such as buffalo, elk, moose and other deer: Elk Island National Park in Alberta, 30 miles from Edmonton, a fenced area containing more than 1,000 head of buffalo as well as large herds of elk, moose, and mule deer; and Wood Buffalo Park, an immense region of forests and open plains extending on each side of the boundary between

Alberta and the Northwest Territories and containing a large herd of buffalo and other species of wildlife. Elk Island National Park is also a popular recreational centre.

*National Historic Parks and Sites.*—Canada has nine National Historic Parks which preserve places of great historic interest in the early development of this continent. All but one of these parks are in Eastern Canada. In Nova Scotia are Port Royal (Habitation) at Lower Granville on the Annapolis Basin; Fort Anne nearby; and the Fortress of Louisbourg on Cape Breton Island. Fort Beauséjour is on the Isthmus of Chignecto in New Brunswick. In Quebec are Fort Lennox on Ile-aux-Noix in the Richelieu River, and Fort Chambly, also on the Richelieu, at Chambly. Fort Wellington, overlooking the St. Lawrence at Prescott, and Fort Malden, at Amherstburg, are in Ontario. Fort Prince of Wales, near Churchill, Man., is the most northerly fortress on the North American Continent.

The National Parks Service is also charged with the preservation, restoration and marking of historic sites throughout Canada. In the work of selecting and acquiring sites worthy of commemoration, the Service has the assistance of the Historic Sites and Monuments Board of Canada, a group of recognized authorities on the history of the section of the country they represent. Of the sites considered by the Board, 360 have been suitably marked and 211 have been recommended for future attention.

## 2. — Locations, Date Established, Areas and Characteristics of the National Parks

Park	Location	Date Estab- lished	Area  sq. miles	Characteristics
<b>Scenic and Recreational Parks</b>				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,564.00	Mountain playground containing famous resorts, Banff and Lake Louise. Typical example of central Rockies, with massive ranges, ice-fields, alpine valleys, glacier-fed lakes and hot mineral springs. Big-game sanctuary. Recreations: climbing, motoring, riding, bathing, golf, tennis, fishing, skiing.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.00	Rugged scenery on western slope of Rockies. Contains wonderful Yoho Valley, with its numerous waterfalls; Kicking Horse Valley; Emerald, O'Hara, and Wapta Lakes; natural bridge. Alpine climbing centre.
Glacier.....	Southeastern British Columbia, on the summit of the Selkirk Range.	1886	521.00	Superb example of Selkirk Mountain region, with snow-capped peaks, glaciers, luxuriant forests, alpine wild flower-gardens, numerous big game. Illecillewaet and Asulkan Glaciers; Rogers Pass; and famed Macdonald tunnel.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	204.00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls. Recreations: motoring, riding, fishing, tennis, golf, camping.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.00	Rich in historical associations. Immense region of majestic peaks, deep canyons, beautiful lakes, containing famous resort, Jasper. Also Miette Hot Springs, Maligne Lake, Mount Edith Cavell and Columbia Ice-field. Big-game sanctuary. Recreations: motoring, climbing, riding, bathing, fishing, golf, tennis, skiing.

2. — Locations, Date Established, Areas and Characteristics of the National Parks—  
continued

Park	Location	Date Estab- lished	Area  sq. miles	Characteristics
<b>Scenic and Recreational Parks—conc.</b>				
Mount Revelstoke....	Southeastern British Columbia, on the west slope of Selkirk.	1914	100.00	Alpine plateau on summit of Mount Revelstoke, accessible by spectacular 18-mile drive from Revelstoke. Contains mountain lakes, alpine flora, game sanctuary, camp-sites, winter sports.
St. Lawrence Islands.	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914	190.00 (acres)	Mainland reservation and thirteen islands among "Thousand Islands". Recreational area; camping, fishing, bathing.
Point Pelee.....	Southern Ontario, on Lake Erie.	1918	6.04	Most southerly mainland point in Canada (41° 41' N.). Recreational area with unique flora and fine beaches. Resting place for many migratory birds. Bathing, camping.
Kootenay.....	Southeastern British Columbia, on the west slope of Rockies.	1920	543.00	Mountain park bordering Vermilion-Sinclair section of Banff-Windermere Highway. Contains Sinclair Canyon, Radium Hot Springs, Marble Canyon. Big-game sanctuary. Recreations: motoring, bathing, camping.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.00	Forested lakeland of northwestern Canada with extensive waterways and fine beaches. Interesting fauna; summer resort. Recreations: boating, bathing, fishing, camping, tennis, golf.
Riding Mountain....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.00	Rolling woodland, with crystal lakes, on summit of Manitoba escarpment. Natural home for big game, including elk, deer, moose. Summer resort. Recreations: bathing, boating, fishing, tennis, golf, camping, lawn bowling.
Georgian Bay Islands	In Georgian Bay, north of Midland, Ont.	1929	5.37	Thirty islands in Georgian Bay. Recreational and camping area, boating, bathing, fishing, on Beausoleil Island. Unique limestone formations and caves on Flowerpot Island.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	390.00 (approx.)	Outstanding example of rugged coast line with mountain background. Remarkable views of Atlantic Ocean and Gulf of St. Lawrence visible from highway; Cabot Trail. Recreations: bathing, boating, golf, tennis, deep-sea fishing, camping.
Prince Edward Island.	North shore of Prince Edward Island.	1937	7.00	Strip 25 miles long on north shore. Recreational area with magnificent beaches. Contains famed "Green Gables" farmstead. Recreations: bathing, boating, fishing, golf, lawn bowling, camping.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1947	79.5	Forested region, rugged terrain, wild life sanctuary. Recreations: golf, tennis, lawn bowling, bathing, fishing, camping.
<b>Wild Animal Parks</b>				
Elk Island.....	Central Alberta, near Lamont.	1913 (Re-served 1906)	75.00	Fenced reserve containing a large herd of plains buffalo; also numerous deer, elk and moose. Recreational area at Astotin Lake; camping, boating, bathing, tennis and golf.

## 2. — Locations, Date Established, Areas and Characteristics of the National Parks— concluded

Park	Location	Date Estab- lished	Area	Characteristics
<b>Wild Animal Parks</b> —concluded			sq. miles	
Wood Buffalo <sup>1</sup> .....	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,625 sq. miles), west of Athabaska and Slave Rivers.	1922	17,300.00 (approx.)	Immense unfenced area of forests and open plains, dotted with lakes and coursed by numerous streams and rivers. Contains a large herd of buffalo, developed from the native "woodland" type and surplus plains buffalo from Buffalo National Park; also bear, beaver, caribou, deer, moose and waterfowl. Area as yet undeveloped.
<b>Historic Parks</b>			acres	
Fort Anne.....	Nova Scotia (Annapolis Royal).	1917	31	Site of early Acadian settlement of Port Royal. Contains well-preserved fortifications of earthworks type; also museum housing a fine historical library and numerous exhibits relating to early periods.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	80	Site of French fort erected in middle of 18th century. Renamed Fort Cumberland by British on capture in 1755; original name since restored. Contains museum with many exhibits relating to history of region.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	340	Old walled city and strategic military and naval station built by the French, 1720-40. Captured by the British in 1758, it was destroyed in 1760. A museum on the site contains interesting mementoes of historic past.
Port Royal.....	Lower Granville, N.S., 8 miles from Annapolis Royal.	1941	17	Reconstruction on the exact site of the Port Royal "Habitation" erected by DeMonts and Champlain in 1605. The original group of buildings, which sheltered the first permanent European settlement in Canada, was destroyed in 1613.
Fort Chambly.....	Chambly, Que.....	1941	2.5	French fort first constructed in 1665 on Richelieu River. Rebuilt of stone in 1711, it figured in several wars. Contains a museum housing many interesting exhibits. A military cemetery outside walls of fort is included in park area.
Fort Lennox.....	Ile-aux-Noix, Que., near St. Jean.	1941	210	Military post constructed by British on site of early French fort, to command Richelieu River water route from south. Several well-preserved stone buildings together with the earthworks and moat remain.
Fort Wellington.....	Prescott, Ont.....	1941	8.5	Contains well-preserved earthworks, block-house and other buildings constructed by British as base for defence of communications between Kingston and Montreal. The block-house contains a small museum.
Fort Malden.....	Amherstburg, Ont..	1941	5	Situated on the banks of the Detroit River, the site of one of the principal frontier military posts in Upper Canada. A new museum building contains interesting exhibits of the region.
Fort Prince of Wales.	Northern Manitoba, near Churchill.	1941	50	Massive stone fort built 1733-71, to secure control of Hudson Bay for Hudson's Bay Company and England. The fort was captured and partially destroyed by a French force in 1782.

<sup>1</sup> Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands and Development Services Branch, Department of Mines and Resources, Ottawa.

**Provincial Parks.**—In addition to the National Parks already described, most of the provinces have established Provincial Parks. These parks, as in the case of the National Parks, are areas of great scenic or other interest maintained for the benefit of present and future generations. The Provincial Parks are administered by the Provincial Governments concerned and in most cases they have not yet reached the degree of development which marks the National Parks. In Prince Edward Island, Nova Scotia, New Brunswick and Manitoba there are no Provincial Parks. Table 3 shows the principal Provincial Parks, by provinces.

### 3.—Locations, Date Established, Areas and Characteristics of the Provincial Parks

Province and Park	Location	Date Established	Area	Characteristics
			acres	
<b>Newfoundland—</b> Serpentine.....	South of Humber Arm, west coast.	1939	26,880	Undeveloped.
<b>Quebec—</b> Laurentides.....	25 miles north of Quebec City, on both sides of Quebec-Chicoutimi highway.	1895	2,560,000	Altitude 3,000 ft., numerous lakes, tumultuous rivers. Speckled trout, moose, deer, black bears, wolves, etc. No hunting. Two hotels and 20 fishing camps.
Trembling Mountain.	80 miles north of Montreal. Mont-Tremblant Village close to the southern section of Park.	1895	770,560	Famous resort area, both summer and winter. Ski school and lifts, 40 miles of ski trails, 9 ski-slopes. Lac Tremblant 750 ft. Highest peak Mont-Tremblant, 3,100 ft.
Gaspesian.....	Gaspe Peninsula.....	1937	320,000	Established to preserve caribou and wild life on south side of St. Lawrence. Accessible from Ste-Anne des Monts and Gaspé. Speckled trout; 2 fishing camps. Includes the highest peaks of the Shickshock Mountains. Highest peak Mount Jacques-Cartier, 4,300 ft.
Mount Orford.....	On Orford Mountain, 15 miles west of Sherbrooke	1938	9,425	Altitude 2,860 ft. Skiing and golfing in season.
Mont-Laurier Senneterre Road Fish and Game Reserve.	In western part of Province 140 miles northwest of Montreal on both sides of route Montreal-Abitibi.	1939	2,069,760	Altitude 1,200 ft. Numerous lakes and rivers. Trout, pike, pickerel and bass. Two establishments to accommodate travellers and stopping place maintained by Department of Game and Fisheries.
Chibougamau Fish and Game Reserve.	30 miles west of Lake St. John. Strip 80 miles long on both sides of Lake Chibougamau highway.	1946	1,088,000	Altitude 1,300 ft. Numerous lakes and rivers. Trout, pike and pickerel.
<b>Ontario—</b> Algonquin.....	In southeastern Ontario in the District of Nipissing and the County of Haliburton, 141 miles north of Toronto, 105 miles west of Ottawa.	1893	1,754,240	Wilderness area, wildlife preserve. Hotels, summer cottage sites, camping facilities, canoe trips, fishing, bathing.
Rondeau.....	In southwestern Ontario in the County of Kent, 20 miles southeast of Chatham, 70 miles east of Windsor.	1894	5,120	Partly cultivated, fine timber stands. Enclosed and wild animals. Fishing, duck-hunting, camping facilities, summer cottage sites, restaurant, store, dance pavilion, other recreational facilities.

### 3. Locations, Date Established, Areas and Characteristics of the Provincial Parks continued

Province and Park	Location	Date Estab- lished	Area	Characteristics
<b>Ontario—conc.</b>			acres	
Quetico.....	In northwestern Ontario in the Rainy River district. Southern boundary adjoins the International Boundary midway between Port Arthur and Fort Frances.	1913	1,190,400	Wilderness area, wildlife preserve. Camping facilities, canoe trips, fishing.
Ipperwash Beach..	In southwestern Ontario in the County of Lambton, on Lake Huron, 100 miles north of Windsor, 50 miles north of Chatham.	1937	109	Sand beach, woodland area. Fishing, camping facilities, bathing.
Lake Superior.....	In northeastern Ontario in the District of Algoma, on Lake Superior, 70 miles (approx.) north of Sault Ste. Marie.	1944	345,600	Wilderness area, wildlife preserve. Fishing.
Sibley.....	In northwestern Ontario in the Thunder Bay district. On north shore of Lake Superior, 40 miles northeast of Port Arthur and Fort William.	1944	39,040	Wilderness area, wildlife preserve.
<b>Saskatchewan—</b>				
Cypress Hills.....	South of Maple Creek near United States boundary.	1932	10,880	Forest area. Bungalow, lodge and cabin accommodation, auto camp.
Duck Mountain...	15 miles northeast of Kam-sack.	1932	51,840	Forest and lake area. Beaches. Fish and wild life.
Good Spirit Lake.	20 miles west of Canora....	1932	3,827	Camp and picnic grounds. Fishing, swimming.
Greenwater Lake.	North of Kelvington.....	1932	22,240	Forest and lake area. Swimming, fishing.
Katepwa Point....	60 miles northeast of Regina on Qu'Appelle Lakes.	1932	17	Camp kitchens. Boating, fishing, swimming.
Little Manito.....	On Manitou Lake.....	1932	238	Medicinal waters. Chateau, cabin and tourist accommodation.
Moose Mountain...	15 miles north of Carlyle.	1932	98,560	Lake area. Poplar and white birch stands. Fishing.
Nipawin.....	35 miles northwest of Nipawin.	1934	161,280	Lodge pole pine. Camping, trout fishing.
Lac La Ronge.....	190 miles north of Prince Albert, Sask.	1939	729,600	Lake area; spruce and poplar. Tourist accommodation, trout fishing.
<b>Alberta—</b>				
Aspen Beach.....	On shore of Gull Lake, west of Lacombe.	1930	17	Summer village lake front. Swimming and picnic facilities.
Ghost River.....	On Ghost and Bow Rivers west of Calgary.	1930	536	Artificial lake. Cottages and picnic ground.
Park Lake.....	North and west of Leth-bridge.	1930	37	Picnic facilities.
Saskatoon Moun- tain Reserve.	In Grande Prairie district.	1930	3,000	Mountain lookout.

3. Locations, Date Established, Areas and Characteristics of the Provincial Parks  
continued

Province and Park	Location	Date Estab- lished	Area	Characteristics
<b>Alberta—conc.</b>			acres	
Sylvan Lake.....	On shores of Sylvan Lake, 11 miles west of Red Deer.	1930	9	Summer village lake front. Swimming, picnic and camp ground.
Writing-on-Stone Reserve.	On Milk River east and north of Coutts.	1930	796	Natural obelisks with undeciphered hieroglyphics. Summer village.
Rochon Sands....	7 miles west, 9 miles north of Stettler on Buffalo Lake.	1931	128	Summer village.
Lundbreck Falls..	West of Macleod on Crownest Pass Highway.	1932	14	Fishing. Picturesque falls.
Saskatoon Island..	West of Grande Prairie....	1932	250	Picnic ground.
Dilberry Lake Reserve.	On Alberta-Saskatchewan boundary near Chauvin.	1933	78	Picturesque lake.
Bad Lands Reserve.	North of Drumheller....	1934	1,800	Fossilized remains of prehistoric animals.
Little Fish Lake..	25 miles east of Drumheller.	1934	18	Boating and swimming, picnic grounds.
Hommy.....	Near Albright.....	1935	6	Picnic and outing facilities.
Assineau Reserve.	On the Assineau River, south of Lesser Slave Lake.	1936	37	Large spruce preserve.
Wapiti Reserve...	10 miles south of Grande Prairie.	1936	22	Canyon in the Wapiti River area. Big-game hunting base.
Little Smoky Reserve.	On Little Smoky River, 12 miles south of Falher.	1937	35	Picnic ground and base for big-game hunting.
Taber.....	1 mile west 1 mile north of Taber on south shore of Oldman River.	1938	45	Picnic and sports ground.
Elkwater Lake....	On south shore of lake at foot of Cypress Hills.	1947	378	Cottages, recreation and camp grounds. Limited transit accommodation.
Crimson Lake....	9 miles northwest of Rocky Mountain House.	1948	900	Cottages. Swimming, fishing, picnic and sports ground.
Fort Fork.....	9 miles southwest of town of Peace River.	1948	2	Site of old fort established by Sir Alexander Mackenzie in 1792.
Red Lodge.....	9 miles west of Bowden on Little Red Deer River.	1948	45	Swimming. Picnic and sports ground.
"Twelve-foot" Davis.	On edge of valley overlooking town of Peace River.	1948	2	Viewpoint above junction of Harmon, Peace and Smoky Rivers. Site of "Twelve-foot" Davis' grave.
Woolford.....	6 miles east of Cardston...	1948	68	Island in St. Mary's River. Picnic and recreation grounds.
Kinbrook Island..	Island in Lake Newell, 9 miles south of Brooks.	1949	90	Island connected by causeway to lake shore. Boating and swimming; recreation and picnic grounds.
Gooseberry Lake.	North of Consort.....	1931	320	Sports ground. Cottages. Transit accommodation.
<b>British Columbia—</b>				
Strathcona.....	Campbell River, Vancouver Island.	1911	529,920	Oldest B.C. Provincial Park, situated in the rugged centre of Vancouver Island. Many glaciers, alpine meadows and lakes. Della Falls, one of the world's highest. Undeveloped and mostly inaccessible.

### 3. Locations, Date Established, Areas and Characteristics of the Provincial Parks— continued

Province and Park	Location	Date Estab- lished	Area	Characteristics
<b>British Columbia</b> —con.			acres	
Mt. Robson.....	Mt. Robson, adjacent to Jasper Park.	1913	513,920	Rocky Mountain park featuring Mt. Robson, highest peak in the Canadian Rockies, Berg Lake and impressive glaciers. Access to Berg Lake Camp by horse trail.
Swan Lake.....	Pouce Coupe, northeast B.C., near Alberta boundary.	1918	166	Swimming and picnic area. Road access.
John Dean.....	Sidney, near Victoria, Vancouver Island.	1921	98	A mountain viewpoint overlooking the Saanich Peninsula and Gulf Islands. Primeval forests and wildflowers. Picnic grounds and hiking trails. Accessible by road.
Kokanee Glacier..	Near Nelson, B.C.....	1922	64,000	High mountain park featuring Kokanee Glacier and several scenic lakes. Fishing, mountaineering and skiing. Poor road and trail access.
Mt. Assiniboine...	South of Banff.....	1922	12,800	An outstanding area of Rocky Mountain scenery. Mt. Assiniboine and small lakes. Hiking, riding, fishing, skiing. Access by horse trail.
Nakusp Hot Spring.	Nakusp, Arrow Lakes, southeast B.C.	1925	127	Hot springs. Access by 8 miles of trail.
Salt Lake.....	Prince Rupert.....	1925	87	Community swimming and picnic area. Access by ferry from Prince Rupert.
Sir Alexander MacKenzie.	Ocean Falls, west coast...	1926	13	Historic monument commemorating end of Sir Alexander MacKenzie's famous overland journey. Accessible by boat.
Garibaldi.....	Haney - Squamish, lower mainland, north of Van- couver.	1927	612,615	An outstanding scenic park with mountain lakes, peaks, and glaciers, flower meadows and interesting geological features. Potential winter sports area. Access by trail from several points on the Pacific Great Eastern Railway.
Princeton.....	Princeton, south central B.C.	1928	341	Local ski grounds, accessible by road.
Sooke Mountain..	Victoria, Vancouver Island	1928	1,446	Undeveloped mountain park.
Inonoaklin.....	Edgewood, south central B.C.	1929	6	Community playground and swimming area.
Keremeos Columns.	Keremeos, south central B.C., near U.S. border.	1931	720	A columnar geological formation; not readily accessible.
Nakusp Recrea- tion.	Nakusp, Arrow Lakes, southeast B.C.	1931	84	Community playground.
Westbank.....	Westbank, Okanagan, south central B.C.	1931	2	Community swimming and picnic area. Road access.
Westview.....	Powell River, south coast- al, northwest of Van- couver.	1931	10	Undeveloped community playground.
Deadman's Island.	Burns Lake, central B.C...	1933	1	Local playground. Picnic grounds.
Lockhart Beach...	Kootenay Lake, southeast B.C.	1933	5	Roadside beach.

3.—Locations, Date Established, Areas and Characteristics of the Provincial Parks—  
continued

Province and Park	Location	Date Estab- lished	Area	Characteristics
<b>British Columbia</b> —con.			acres	
Strombeck.....	Alice Arm on Portland Canal.	1933	1	Local playground.
Beaton.....	Fort St. John, northeast B.C., near Alberta boundary.	1934	770	Community picnic ground. Fishing.
Mt. Seymour....	North Vancouver, lower mainland, B.C.	1936	9,156	Mountain. Winter sport park with summer hiking, swimming and berry picking. Highway under construction.
King George VI...	Rossland, southeast B.C. near U.S. border.	1937	50	Local playground.
Oliver.....	Oliver, south central, near U. S. border.	1937	21	Community playground.
Brentwood Bay...	Victoria, Vancouver Is-land.	1938	1	Foreshore parks. Picnic and fishing.
Clearwater.....	Hedly, south central B.C.	1938	260	Scenic mountain lake. Fishing. Poor road.
Crescent Beach...	Crescent Beach, lower mainland near U. S. border.	1938	237	Ocean beach. Road access.
Mara Recreation..	Sicamous, central B.C....	1938	15	Roadside beach, picnic ground and swimming.
Mt. Bruce.....	Salt Spring Island, south coast near Victoria.	1938	480	Undeveloped forest park.
Mt. Maxwell.....	Salt Spring Island, south coast near Victoria.	1938	492	Undeveloped forest park with scenic lookout.
Tweedsmuir.....	Bella Coola, Burns Lake..	1938	3,456,000	One of the larger wilderness areas in North America. Scenic boat tours and trail rides. Fishing, hunting.
Elk River.....	Fernie, southeastern B.C.	1939	10	Community playground. Swimming.
Osoyoos.....	Osoyoos, south central B.C. near U.S. border.	1939	7	Community playground.
Peace Arch.....	White Rock, B.C., and Blaine, Wash., Interna-tional Boundary.	1939	16	Landscaped international park featur-ing Peace Arch. Picnic grounds. King George VI Highway.
Testalinda.....	Oliver, south central B.C. near U.S. border.	1939	5	Undeveloped community area.
Wells Grey.....	North of Kamloops, B.C..	1939	1,164,800	Undeveloped lake and mountain park. Fishing and hunting. Access, poor road and trail.
Chasm.....	Clinton, central B.C.....	1940	315	Outstanding geological feature, a great chasm in the Interior Plateau adjacent to the Caribou Highway.
Elk Falls.....	Campbell River, east coast Vancouver Island.	1940	2,558	A series of cascades and falls on Camp-bell River. Stand of giant firs. Ad-jacent to hydro-electric installations.
Little Qualicum Falls.	Qualicum Beach, adjacent to Parksville Alberni Highway.	1940	207	A forest area traversed by a picturesque river containing falls and canyons. Picnic ground, swimming, camping and hiking. Accessible by highway.
Manitou.....	Naramata — Okanagan Lake, south central B.C.	1940	3	Community playgrounds and swim-ming.

### 3.—Locations, Date Established, Areas and Characteristics of the Provincial Parks— concluded

Park	Location	Date Estab- lished	Area	Characteristics
<b>British Columbia</b> —conc.			acres	
Premier Lake.....	Cranbrook, Canal Flats, southeastern B.C.	1940	165	Community playground. Fishing, picnicking, swimming. Poor road access.
Silver Star.....	Vernon, Okanagan, south central B.C.	1940	21,888	Interior mountain park. Alpine scenery, berry picking, skiing. Poor road access.
Stamp Falls.....	Alberni, Vancouver Island.	1940	424	Forest park with river falls, fish ladder and swimming pool. Picnic grounds, camping. Road access.
Hamber.....	Big Bend Highway. Park adjoins Jasper and Banff.	1941	2,431,960	Undeveloped forest and mountain area bordering easterly portion of Big Bend Highway.
Manning.....	Hope-Princeton Highway south central B.C., near U.S. border.	1941	171,500	A mountain park featuring Alpine flower meadows and scenic fishing lakes. Wildlife sanctuary. Acces- sible by highway.
Wendle.....	Wells, east central B.C...	1941	640	Community swimming and picnic area. Road access.
Darke Lake.....	Summerland, S. Okan- agan.	1943	5,472	Typical scenic group of interior mount- ain lakes. Fishing, hunting and boating.
Kitsumgallum....	On Kitsumgallum Lake, vicinity of Terrace.	1943	25	Undeveloped area used as community beach and picnic grounds.
Cathedral Grove..	Cameron Lake, Vancouver Island.	1944	337	World-famous stand of virgin west- coast forest, accessible on the Alberni-Parksville Highway.
Kitty Coleman Beach.	Merville, east coast Van- couver Island.	1944	21	Community picnic and fishing centre. Road access.
Memory Island...	Shawnigan Lakes, South Vancouver Island.	1945	2	Small undeveloped island in a popular recreational area. Swimming, fish- ing; adjacent to highway.
Roberts Creek....	Roberts Creek, south coastal, northwest of Vancouver.	1947	2	Community picnic and swimming area. Road access.
Cultus Lake.....	Chilliwack, Fraser Valley, lower mainland.	1948	950	Summer park. Swimming, picnicking, fishing. Road access.
McDonald.....	Sidney, near Victoria, S. Vancouver Island.	1948	5	Partly developed trail, picnic ground.
Petroglyph.....	Nanaimo, east coast, Van- couver Island.	1948	4	Site of ancient rock carvings, of un- known origin. Accessible by road.
Tow Hill.....	Queen Charlotte Island...	1948	480	Community picnic ground in largely undeveloped park.
Ivy Green.....	Ladysmith, Vancouver Island.	1949	50	Community park and picnic ground.

## 4.—Total Areas, National and Provincial Parks, by Provinces and Territories

 Nipawin and Lac La Ronge unsurveyed lands, 1,392 square miles in extent.

<sup>2</sup> Includes

## Section 4.—Game, Game Laws and Fishery Regulations

*Game and Game Fish.*—The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. In the wooded and unsettled areas of Eastern Canada there are moose, deer, bear, and smaller game, while in the western part there are also caribou, wapiti, mountain sheep, mountain goat and grizzly bear. Mountain lion or cougar are found in British Columbia and in the mountains of Alberta, while in the northwest and far north there still exist herds of buffalo and musk-ox that are given absolute protection by the Federal Government.

Ruffed grouse or “partridge” are found in the wooded areas of Canada from coast to coast. Sharptail grouse or “prairie chicken” inhabit the open prairies and the partly timbered areas of the three mid-western provinces. The Franklin grouse is native to the mountains of the west; ptarmigan, or Arctic grouse, live in the treeless northern plains and are found also in the high mountains of Alberta and British Columbia.

Canada, particularly Western Canada, is the breeding-ground of most of the waterfowl in North America. These birds spend the winter chiefly in the southern United States and Mexico, and migrate to Canada in the spring. Whistling swans

nest in the Arctic, and trumpeter swans in Alberta; both species are rigorously protected at all times. Countless numbers of ducks breed in the sloughs and marshes of the Prairie Provinces, while geese of many species nest as far north as the Arctic Ocean.

Hunting regulations governing waterfowl in both Canada and the United States are based on the Migratory Birds Treaty of 1916.

Broadly speaking, game fish are to be found in various parts of Canada as follows: on the Atlantic side, salmon and trout; in the middle of the country, bass, maskinonge, wall-eyed and northern pike; and in the west, trout and salmon. In the waters off the Atlantic Coast are swordfish and tuna.

*Game Laws and Fishery Regulations.*—Game laws, except for the National Parks and the Migratory Birds Convention Act, are under the administration of the various provinces and territories. A Federal law, the Game Export Act, passed in 1941, prohibits the export of game from any province or territory without a permit from the province or territory concerned. It has been proclaimed for all provinces and territories except Prince Edward Island. In both National and Provincial Parks, while angling is permitted, the shooting or molesting of game is forbidden and the wildlife resources are strictly protected. Bird sanctuaries have been established by the Federal Government under the Migratory Birds Convention Act and by many of the provinces as well.

The Migratory Birds Treaty and the legislation giving it effect throughout Canada are administered by the Dominion Wildlife Service of the Department of Mines and Resources in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. The Treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the Treaty and copies of the regulations enacted for its enforcement, may be obtained from the Chief, Dominion Wildlife Service, Department of Mines and Resources, Ottawa. Details as to close seasons, licences, etc., vary from year to year and are often subject to changes before the opening of the season. Information about the Federal game laws may be obtained by writing to the Dominion Wildlife Service, Department of Mines and Resources, Ottawa.

Fisheries in the National Parks of Canada are under the administration of the National Parks Service of the Federal Department of Mines and Resources, Ottawa. The fisheries of Alberta and Saskatchewan, the non-tidal fisheries of British Columbia, Manitoba, Ontario, New Brunswick, Prince Edward Island and Newfoundland, and all the fisheries of Quebec are under the administration of the respective provinces. Fisheries regulations may be obtained from the Department of Fisheries, Ottawa.

or, in the case of National Parks, from the National Parks Service, Ottawa. Data respecting provincial game laws and fishery regulations are available from:—

## PART VI.—CLIMATE, METEOROLOGY, ETC.

### Section 1.—Climate

The list at the front of this volume, under the heading "Climate and Meteorology", gives the articles that have appeared in previous editions of the Year Book. Many of the statistical compilations that accompany those articles were built up on the basis of long-term averages and are still of value but, in recent years, the science of climate and weather has advanced considerably and a great many more stations for the collection of data have been established across Canada. This is especially true of the period since 1939 and the rapid growth of aviation.

At pp. 41-62 of the 1948-49 edition of the Year Book, there appears a revised treatment of the Climate of Canada Part I. In the headnote to that material it is pointed out that the detailed tabulations for climatic factors covering a wide range of stations across Canada would be published as Part II later. This material is

presented below. The two Parts have been combined in a reprint that may be obtained by applying to the Meteorological Division, Department of Transport, Toronto, Ont.

**Explanation of the Tables.**—The thirty-five meteorological stations for which data are listed are mostly well-known or populous places with climates fairly representative of a considerable area. Under Temperature "Average Daily" refers to figures derived during the period of observation (in most cases 50 years) by adding together the mean temperatures for all the days of the period and striking the average. The average high and low daily temperatures are obtained in the same way. The average high and low extremes are struck from the extreme high and low temperatures for 50 Januaries. Under "Record High and Low" are shown the temperature that is above and the temperature that is below all others for the 50-year period.

Under Precipitation "Rain, Inches" shows the total depth of water accumulated on a hypothetical horizontal impervious surface without evaporation, one inch of rainfall representing approximately 113 short tons of water per acre. Similarly, the depth of snow given is that which falls on a horizontal surface, without settling, melting or sublimation but with its density as determined immediately after each snowfall.

Since it has been shown that the depth of water obtained from melting newly-fallen snow is roughly one-tenth of the depth of the snow, the total precipitation for any month is obtained by adding together the total rainfall and one-tenth of the depth of newly-fallen snow. A day with rain is, for the purpose of these tables, one on which 1/100 of an inch or more has fallen and a day with snow is one with at least 1/10 of an inch of newly-fallen snow.

Under Heating Factor the "Day Degrees" represent, for a given month, the sum of the deficits of outside temperature which have to be made up by fuel consumption to raise the inside temperature of a building to a constant 65°F. level. The totals measure, approximately, the difficulty of maintaining a given temperature in various parts of Canada.

The average number of days in each month when "Thunder" has been heard at least once in twenty-four hours is listed.

The number of Hours of Bright Sunshine is determined by a Campbell-Stokes recorder—a spherical lens exposed to the sky, which focuses the sun's rays to a burning-point. Sometimes a veil of cloud weakens the trace on the recording paper but the length of these traces is recorded as bright sunshine. On the other hand, the recorder does not function well until the whole disc of the sun is visible above the horizon: the day's recorded total, therefore, tends to be diminished by a slight amount of sunshine at sunrise and sunset.

Whenever the temperature four feet above the ground falls to 32°F. or lower, the day is counted as a day with "Frost". The average date of the last spring frost and of the first frost in the autumn, appended in footnotes, approximates the average period *continuously* free from frost.

"Humidity" is given for a height of approximately four feet above the ground. The weight of the water-vapour mixed with one thousand parts by weight of absolutely dry air is given under the heading "Water-vapour" and is an average for each month determined from several years of daily observations. For every temperature there is a maximum amount of water-vapour that can exist in a given volume of air. When the temperature falls to where the water-vapour becomes visible, the temperature is said to have reached the *dew-point*, the air is saturated and the relative humidity is 100 p.c. The relative humidity is ordinarily least in the early afternoon and greatest about dawn.

## 1.—Long-Term Average of Climatic Data for Representative Canadian Stations

NOTE.—For full explanation of terms used and observing methods see p. 34.

## Section 2.—Meteorology

See list at the front of this edition, under the heading "Climate and Meteorology", for special material published in previous editions of the Year Book.

## Section 3.—Standard Time and Time Zones

In former times, when transportation was slow and people for the most part lived within their own communities, it was natural enough that each community should have its own local time based on sun time. The difference in sun time as between communities is, of course, determined by the difference in their longitude. Inasmuch as the sun appears to travel the 360 degrees around the world in 24 hours or 1,440 minutes, a community that is precisely one degree of longitude west of another community in the same latitude naturally has the sun rise and set four minutes later than it rises and sets in the community that is one degree farther east. Local time, in so far as it was accurately kept, tended therefore to conform to "sun time" and noon came when the sun reached its highest point.

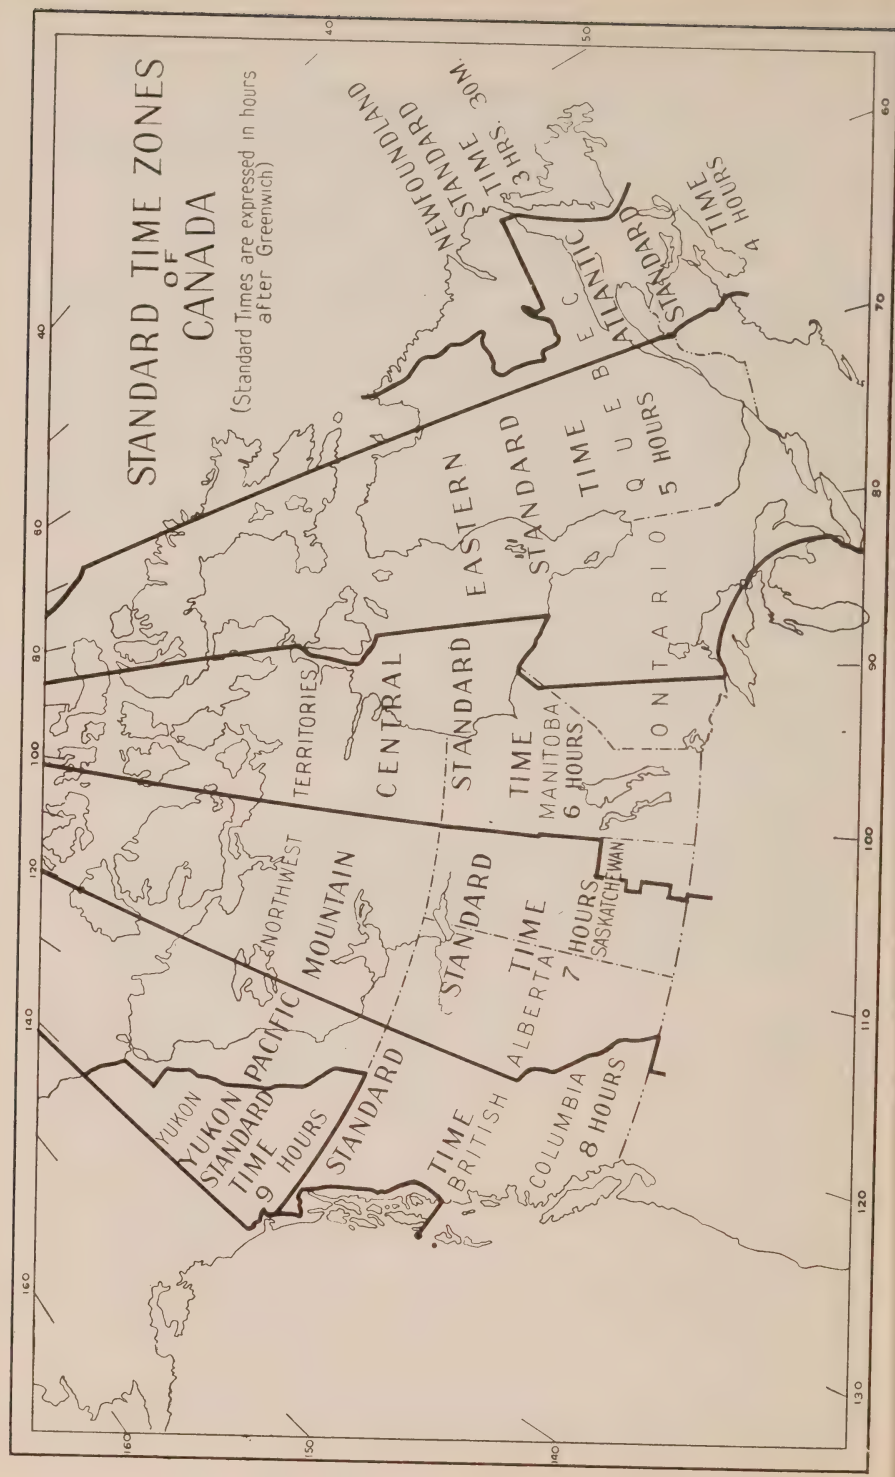

The advent of more rapid transportation, however, made these local times extremely inconvenient for travellers. In particular it was almost impossible to work out railway time tables on the basis of the local times of each community. Consequently in Great Britain, where the differences of longitude are comparatively small, the problem was solved in 1880 by placing the whole country on the time of Greenwich Observatory, while Irish time was standardized at twenty-five minutes behind Greenwich time, being the time of Dublin.

From 1878, Sir Sandford Fleming advocated the general use of "standard time zones" and this suggestion was adopted at a world conference held at Washington in 1884. Sir Sandford Fleming proposed that the number of times in the world should be reduced to twenty-four, each time zone to extend over one twenty-fourth of the surface of the earth and to include all the territory between two meridians, fifteen degrees of longitude apart. Standard time would be Greenwich time, all other time zones being a definite number of hours either in advance of or behind Greenwich. These proposals were very generally accepted. Mid-European and East European times are to-day respectively one hour and two hours in advance of Greenwich. The American Continent, however, extends over such an enormous distance from east to west that it was necessary to establish a number of time zones. Atlantic, Eastern, Central, Mountain, Pacific, Yukon and Alaska time zones have times, respectively, four, five, six, seven, eight, nine and ten hours behind Greenwich. The differences are usually expressed in intervals of so many hours' difference from Greenwich. However, some localities of smaller area have times which are not an exact hour's difference from Greenwich, Newfoundland and Labrador, for example, having a time three hours and thirty minutes behind Greenwich. This difference of three hours and thirty minutes would correspond to west longitude 52°30' which is nearly the longitude of St. John's, Newfoundland.

In Canada, besides the Newfoundland time zone, there are six other time zones. Atlantic standard time, which is the local time at the 60th meridian running near Sydney, N.S., and is four hours behind Greenwich, is used in the Maritime Provinces

# STANDARD TIME ZONES OF CANADA

(Standard Times are expressed in hours  
after Greenwich)

and those parts of Quebec and the Northwest Territories east of the 68th meridian of west longitude. Eastern standard time, which is the local time at the 75th meridian running near Cornwall, Ont., and is thus five hours behind Greenwich, is used in Quebec west of the 68th meridian, in Ontario east of the 90th meridian and in the Northwest Territories between the 68th and 85th meridians. Central standard time, which is the local time at the 90th meridian, is six hours behind Greenwich and is used in Ontario west of the 90th meridian, in Manitoba, in the Northwest Territories between the 85th and the 102nd meridians and in the southeasterly part of Saskatchewan. Mountain time, which is the local time at the 105th meridian running near Regina, is seven hours behind Greenwich and is used throughout Saskatchewan except in the southeasterly part, throughout Alberta and in that part of the Northwest Territories between the 102nd and 120th meridians. Pacific standard time, which is the local time of the 120th meridian running near Kamloops, British Columbia, is eight hours behind Greenwich and is used throughout British Columbia and in that part of the Northwest Territories lying west of the 120th meridian. Yukon standard time, which is the local time at the 135th meridian, running near Whitehorse, Yukon, is nine hours behind Greenwich and is used throughout the Yukon Territory. Thus throughout Canada there are no fewer than seven different standard times roughly corresponding with the 88 degrees of longitude between St. John's, Newfoundland, and the Alaskan boundary.

Some municipalities adopt the time used by the local railways, which in some cases differs from the standard, and there are also villages that adopt such time as seems best to suit their convenience, but, in general, the legal boundaries of the different time zones are actually in use. The boundaries of the standard time zones in Canada and Newfoundland are shown in the map on p. 72.

**Daylight Saving Time.**—For some years before the First World War there was active propaganda, particularly in the cities, for the use of an earlier time, usually referred to as "daylight saving time", one hour ahead of standard time, during the summer months. It was considered that both from the economic and from the health point of view, the people, particularly in industrial towns and cities, would gain by beginning work earlier in the morning and having a longer period of sunlight at their disposal for recreation after the work of the day was over. The United Kingdom adopted daylight saving time in 1916. The United States and Canada followed suit in 1918, but the Canadian Act lapsed at the end of that year. Since that date, however, various towns and cities have adopted daylight saving by-laws for varying periods in the summer months.

**Legal Authority for the Time Zones.**—All regulations made in Canada concerning standard time, except the Daylight Saving Act of 1918, have been passed by the Provincial Legislatures and the Northwest Territories Council. This legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for game, times of opening and closing business houses and places of amusement.

---

## PART VII.—ASTROPHYSICS

Major astronomical work is carried on by three Canadian institutions; the Dominion Observatory, Ottawa, Ont., the Dominion Astrophysical Observatory, Victoria, B.C. (operated by the Mines, Forests and Scientific Services Branch, Department of Mines and Resources), and the David Dunlap Observatory, which is associated with the University of Toronto. Of the two Government institutions the Dominion Observatory at Ottawa has specialized mainly in the astronomy of position in solar physics and in various branches of geophysical work, while the major effort in astrophysics has been concentrated at the Dominion Astrophysical Observatory at Victoria, B.C. The David Dunlap Observatory is a newer institution founded in 1935 with very fine astrophysical equipment of a kind similar to that in use at Victoria. It not only performs the function of a privately financed and administrated research institution but is also the nucleus of a university department of astronomy. A special article dealing specifically with the work of the Dominion Astrophysical Observatory at Victoria, B.C., appears at pp. 63-71 of the 1948-49 edition of the Year Book.

## PART I.—HISTORY

### Section 1.—Outlines of Canadian History

See list at front of this edition for material under this heading published in previous editions of the Year Book.

### Section 2.—A Bibliography of Canadian History

See list at front of this edition for material under this heading published in previous editions of the Year Book.

### Section 3.—Historical Records

See list at front of this edition for material under this heading published in previous editions of the Year Book.

## PART II.—CHRONOLOGY

*NOTE.—The Ministries, dates of elections and lengths of sessions of Dominion Parliaments are given in Tables 2 and 5, respectively, of Chapter III. Changes in Provincial Legislatures and Ministries from Confederation to 1925 are given at pp. 75-84 of the 1924 Year Book, from 1924 to 1937 at pp. 110-118 of the 1938 Year Book and from 1938-49 at pp. 117-130 of this edition. References to these matters have, therefore, been deleted from the Chronology. References to incidents in Newfoundland history have been added.*

- |  |   |
|--|---|
| 1497. June 24, Eastern coast of North America discovered by John Cabot in the service of King Henry VII of England.                      | 1603. June 22, Champlain's first landing in Canada, at Quebec.  |
| 1498. Cabot discovered Hudson Strait.  | 1604. De Monts settled colony on island in the St. Croix River.   |
| 1501. Gaspar Corte Real visited Newfoundland and Labrador.   | 1605. Founding of Port Royal (Annapolis, N.S.).   |

1898. June 13, The Yukon District established as a separate Territory. Aug. 1, British Preferential Tariff came into force. Aug. 23, Meeting at Quebec of the Joint High Commission between Canada and the United States. Dec. 25, Imperial penny (2-cent) postage introduced.
1899. Oct. 11, Outbreak of the South African War. Oct. 29, First Canadian Contingent left Quebec for South Africa.
1900. Feb. 27, Battle of Paardeberg. Apr. 26, Great fire at Ottawa and Hull.
1901. Jan. 22, Death of Queen Victoria and accession of King Edward VII. Apr. 1, Fourth Dominion Census: population 5,371,315. Sept. 16-Oct. 21, Visit to Canada of the Duke and Duchess of Cornwall and York. Dec. 12, First transatlantic wireless signal received by Marconi at St. John's, Newfoundland. Population of Newfoundland and Labrador, 220,984.
1902. May 31, Peace signed at Vereeniging ending the South African War. June 30, Fourth Colonial Conference at London. December, First message sent by wireless from Canada to the United Kingdom via Cape Breton, N.S.
1903. Jan. 24, Signing of the Alaskan Boundary Convention. Oct. 20, Award of the Alaskan Boundary Commission.
1904. Feb. 1, Dominion Railway Commission established. Apr. 19, Great fire at Toronto. Oct. 8, Incorporation of Edmonton. By the Anglo-French Convention exclusive fishing rights of the French in Newfoundland were waived in exchange for other concessions.
1905. Sept. 1, Creation of the Provinces of Alberta and Saskatchewan.
1906. Roald Amundsen, in the schooner *Gjoa*, arrived at Nome, Alaska, the first completed traverse of the North-West Passage. June 24, First quinquennial census of the three Prairie Provinces: population 808,646. Oct. 8, Interprovincial Conference at Ottawa.
1907. Apr. 15-May 14, Fifth Colonial Conference at London. Oct. 17, Transatlantic wireless open for public service. Dec. 6, First recorded passenger flight in Canada of a heavier-than-air machine (Dr. Graham Bell's tetrahedral kite, *Cygnét*).
1908. Jan. 2, Establishment at Ottawa of a branch of the Royal Mint. July 20-31, Quebec tercentenary celebrations. Visit of Prince of Wales to Quebec.

1909. Jan. 11, Signing of International Boundary Waters Convention between Canada and United States. Feb. 23, First flight in British Empire of a heavier-than-air machine under its own power piloted by a British subject (McCurdy's *Silver Dart* at Braddock's Bay, N.S.).
1910. May 6, Death of King Edward VII. Accession of King George V. Sept. 7, North Atlantic Coast Fisheries Arbitration Award of The Hague Tribunal. Trade agreements made with Germany, Belgium, Holland and Italy. Oct. 11, Inauguration at Berlin (now Kitchener) of Ontario Hydro-Electric Power Commission's transmission system.
1911. May 23 - June 20, Imperial Conference at London. June 1, Fifth Dominion Census: population 7,206,643. Population of Newfoundland and Labrador 242,619.
1912. Mar. 29 - Apr. 9, First Canada-West Indies Trade Conference held at Ottawa. Appointment of Dominions Royal Commission. May 15, Boundaries Extension Act settling boundaries of Quebec, Ontario and Manitoba.
1914. Aug. 4, War with Germany; Aug. 12, with Austria-Hungary; Nov. 5, with Turkey. Aug. 18-22, Special war session of Canadian Parliament. Oct. 16, First Canadian Contingent of over 33,000 troops landed at Plymouth, England.
1915. February, First Canadian Contingent landed in France and proceeded to Flanders.
1916. Jan. 12, Number of Canadian troops increased to 500,000. Feb. 3, Destruction by fire of the Houses of Parliament at Ottawa. June 1, Census of Prairie Provinces: population 1,698,137. Sept. 1, Corner-stone of new Houses of Parliament laid by Duke of Connaught.
1917. Feb. 12 - May 15, Imperial Conference. Mar. 20 - May 2, Meetings at London of Imperial War Cabinet. Mar. 21 - Apr. 27, Imperial War Conference. Sept. 20, Parliamentary franchise in Federal elections extended to women. Dec. 6, Serious explosion at Halifax, N.S.
1918. June-July, Imperial War Conference held at London. Sept. 30, Bulgaria surrendered and signed armistice. Oct. 31, Turkey surrendered and signed armistice. Nov. 4, Austria-Hungary surrendered and signed armistice. Nov. 11, Capture of Mons. Armistice signed.
1919. Feb. 17, Death of Sir Wilfrid Laurier. June 28, Signing at Versailles of Peace Treaty and Protocol. Aug. 22, Formal opening of Quebec Bridge by the Prince of Wales. Sept. 1, The Prince of Wales laid foundation stone of Peace Tower, Parliament Buildings, Ottawa. Sept. 1 - Nov. 10, Special peace session, thirteenth Parliament of Canada. Dec. 20, Organization of "Canadian National Railways".
1920. Jan. 10, Ratification of the Treaty of Versailles. May 31 - June 18, Trade Conference at Ottawa between Dominion and West Indian Governments. July 16, Ratification of the Treaty of St. Germain-en-Laye. Aug. 9, Ratification of the Treaty of Neuilly-sur-Seine. Nov. 15, First meeting of League of Nations Assembly began at Geneva, Switzerland.
1921. May 10, Preferential tariff arrangement with British West Indies became effective. June 1, Sixth Dominion Census: population 8,787,949. June 20 - Aug. 5, Imperial Conference. Nov. 11, Opening of Conference on Limitation of Armament at Washington. Population of Newfoundland and Labrador, 263,033.
1922. Feb. 1, Arms Conference at Washington approved five-power treaty limiting capital ships and disapproving unrestricted submarine warfare and use of poison gas. Apr. 10, General Economic Conference at Genoa, Italy. July 13, Conference between Canada and the United States re perpetuating the Rush-Bagot Treaty regarding armament on the Great Lakes. Aug. 7, Allied Conference on war debts and reparations opened at London. Dec. 9, Reparations Conference opened at London.
1923. Oct. 1, Imperial Conference and Economic Conference at London.
1926. June 1, Census of Prairie Provinces: population 2,067,393. Oct. 19 - Nov. 23, Imperial Conference at London. Nov. 26, Hon. C. Vincent Massey appointed first Envoy Extraordinary and Minister Plenipotentiary to the United States.
1927. Mar. 1, Labrador Boundary Award by the Privy Council defining the Newfoundland boundary in the Labrador Peninsula. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reached Ottawa. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. Oct. 4, First airmail service in Canada. November, Dominion-Provincial Conference at Ottawa.
1928. Apr. 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceased to exist, leaving Quebec the only province with a bi-cameral legislature.
1929. Dec. 14, Transfer of natural resources by Dominion Government to Manitoba and Alberta.
1930. Feb. 20, Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskatchewan. Oct. 1, Imperial Conference at London.
1931. June 1, Seventh Dominion Census: population 10,376,786. Dec. 12, Statute of Westminster, establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom and exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act, became effective.
1932. July 21 - Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal.
1933. Jan. 17-19, Dominion-Provincial Conference.
1934. Jan. 30, Newfoundland Constitution suspended.
1935. Mar. 11, Bank of Canada commenced business. Dec. 9, Dominion-Provincial Conference at Ottawa; Naval Limitation Conference at London. Population of Newfoundland and Labrador, 289,588.
1936. Jan. 20, Death of King George V. Accession of King Edward VIII. June 1, Census of Prairie Provinces: population 2,415,545. July 26, Unveiling of Vimy Memorial in France by King Edward VIII. Dec. 11, Abdication of King Edward VIII and accession of H. M. King George VI.
1937. May 12, Coronation of H. M. King George VI. July 8, Imperial Airways flying boat *Caledonia* arrived at Montreal from Southampton, inaugurating the experimental phase of the Transatlantic Airways.
1938. Mar. 4, Unanimous judgments of the Supreme Court of Canada in favour of the Dominion Government on the Alberta constitutional references. (See 1941 Year Book, p. 19, for further references to this subject.) Oct. 1, Occupation

- of Sudeten areas of Czechoslovakia by Germany. Nov. 17, Trade Agreement between Canada and United States signed at Washington.
1939. Mar. 14, Invasion of Czechoslovakia by Germany. May 17 - June 15, Visit of Their Majesties King George VI and Queen Elizabeth to Canada and United States. Aug. 24, German-Soviet Russia mutual non-aggression treaty signed. Sept. 1, Poland invaded by Germany. Sept. 3, War with Germany declared by the United Kingdom and France. Sept. 10, Canada declared war upon Germany. Dec. 17, First Canadian troops landed in United Kingdom. British Commonwealth Air Training Plan Agreement signed at Ottawa by United Kingdom, Canada, Australia and New Zealand.
1940. Jan. 1, First municipal government in the Northwest Territories inaugurated at Yellowknife. Apr. 9, Germany invaded Denmark and Norway. Apr. 25, Quebec women granted franchise in provincial elections and enabled to qualify as candidates for the Legislature. June 22, Armistice signed between France and Germany. Aug. 17-18, Conference on defences of the northern half of the Western Hemisphere held at Ogdensburg, N.Y.; Permanent Joint Board on Defence created.
1941. Jan. 14-15, Dominion-Provincial Conference, called to consider findings of Royal Commission on Dominion-Provincial Relations, terminated without agreement. June 11, Eighth Dominion Census; population, 11,506,655. June 22, Germany attacked Russia. July 13, Canada approved Anglo-Soviet treaty. Dec. 7, Japanese attack on Pearl Harbour. Canada declared state of war with Roumania, Hungary, Finland and Japan. Dec. 8, Britain and United States declared war on Japan. Dec. 11, Germany, Italy and United States formally declared war.
1942. Jan. 2, Signing at Washington of joint declaration by 26 nations (including Canada), binding each to employ its full resources against the Axis Powers. July 3, Formation of Canadian joint naval, military and air staff at Washington. Aug. 19, Raid on Dieppe by Canadian troops supported by British, United States and Fighting French troops; Canadian casualties 3,350 out of 5,000 engaged. Nov. 9, Canada broke off relations with Vichy, France.
1943. Jan. 14-24, Prime Minister Churchill and President Roosevelt met at Casablanca to draft United Nations' war plans. May 12, Fighting ended in North Africa. July 10, British, Canadian and United States forces invaded Sicily. Aug. 10-24, Anglo-American War Conference held at Quebec city. Aug. 15, Canadian and United States troops occupied Kiska Island in the Aleutians. Aug. 25, President Roosevelt visited Ottawa, the first visit by a United States President to Canada's capital while holding office. Sept. 8, Unconditional surrender of Italy. Nov. 9, Canada signed UNRRA Agreement. Dec. 24, Gen. Dwight D. Eisenhower named Commander-in-Chief of Allied Forces for invasion of Europe.
1944. Mar. 17, International air transport authority created to regulate air traffic among nations. Mar. 20, Lt.-Gen. H. D. G. Crerar appointed to command the First Canadian Army. May 1-16, Conference of British Commonwealth countries at London, England. June 6, Allied invasion of Western Europe commenced. July 1-22, United Nations monetary and financial conference of 44 nations held at Bretton Woods, N.H., U.S.A. July 23, First Canadian Army commenced operations in Normandy as a separate army. Sept. 11-16, Second Quebec Conference attended by Prime Minister Churchill and President Roosevelt. Sept. 16, Siegfried Line broken by Allied troops. The Federal Government recognized the Provisional Government of the French Republic. Nov. 1 - Dec. 7, International Civil Aviation Conference of 54 nations, including Canada, held in Chicago, U.S.A.
1945. Apr. 12, Death of President Roosevelt. Apr. 25-June 26, United Nations World Security Conference met at San Francisco to prepare a charter for a general international organization. May 2, The war in Italy and part of Austria ended. May 7, Unconditional surrender to Gen. Eisenhower of the German Armed Forces. June 6, Establishment of Provisional International Civil Aviation Organization (P.I.C.A.O.) by 26 nations, including Canada. July 4, Canadian military troops entered Berlin as part of the British garrison force. July 26, The Potsdam Declaration issued by the Allied Powers. Aug. 6, First atomic bomb dropped at Hiroshima, Japan. Aug. 6-10, Dominion-Provincial Conference at Ottawa. Aug. 8, U.S.S.R. declared war against Japan. Aug. 9, Second atomic bomb dropped on the naval base of Nagasaki. Sept. 1, The Japanese officially laid down their arms. Oct. 16-Nov. 1, United Nations Food and Agriculture Organization Conference of 29 countries, including Canada, held at Quebec city. Dec. 17-28, U.K., U.S., and U.S.S.R. announced agreements on the United Nations control of atomic power. Population of Newfoundland and Labrador, 321,819.
1946. Jan. 10 - Feb. 15, First General Assembly of the United Nations held at London, England. Jan. 24, Establishment of Atomic Energy Commission upon which Canada is represented. Feb. 6, Judges of International Court of Justice elected Canada for a 3-year term. Apr. 29, The Dominion-Provincial Conference (adjourned Aug. 10, 1945) resumed its sittings, and adjourned without an agreement. June 1, Census of Prairie Provinces; population 2,362,941. June 9, The Right Honourable W. L. Mackenzie King established record for length of service as Prime Minister of Canada. June 21, A National Convention elected in the Island of Newfoundland to consider the economic situation and future form of Government. July 5, Canadian dollar adjusted to parity with the United States dollar. July 24, Wheat agreement arranged between Great Britain and Canada for a four-year period. July 29-Oct. 15, Peace Conference at Luxembourg Palace, Paris, France, to study texts of treaty agreements drafted by Allied Foreign Ministers Council. June-Sept., The National Convention delega-

- tion in Ottawa to discuss the basis for federal union of Newfoundland with Canada.
1947. Jan. 14, Canada elected to Economic and Social Council of United Nations. June 10-12, President Truman visited Ottawa. July 31, Canada represented at Imperial Privy Council meeting at London, England, for approval of marriage of Princess Elizabeth to Lieutenant Philip Mountbatten. Aug. 25-Sept. 11, Third Session of FAO Conference at Geneva. Sept. 16-Nov. 29, Second Session of the Second General Assembly of the United Nations at New York. Sept. 30, Canada elected to United Nations Security Council for two-year term. Oct. 30, Twenty-three countries, including Canada, signed multilateral trade agreements at Geneva Trade Conference. Nov. 20, Marriage of H.R.H. the Princess Elizabeth, Duchess of Edinburgh, and H.R.H. Prince Philip, Duke of Edinburgh at Westminster Abbey.
1948. Jan. 4, Union of Burma came into existence as an independent republic. Jan. 8, Canada given a permanent appointment on the Security Council of the United Nations. Feb. 4, Ceylon an independent country in the Commonwealth. Apr. 20, Appointment of Industrial Defence Board. The Rt. Hon. W. L. Mackenzie King established length-of-service record for any Prime Minister of the Commonwealth. July 15, Canada gave full support to a United Nations Security Council order to the Jews and Arabs to cease fighting in Palestine. July 22, Referendum held in Newfoundland resulted in a majority vote cast in favour of Confederation with Canada. Aug. 5, The Rt. Hon. W. L. Mackenzie King resigned as Leader of the Liberal Party, ending 29 years of leadership. Aug. 7, The Rt. Hon. L. S. St. Laurent, Secretary of State for External Affairs, chosen by the National Liberal Convention at Ottawa to succeed The Rt. Hon. W. L. Mackenzie King as Leader of the Liberal Party. Sept. 1, The Federal Labour Code, establishing machinery for collective bargaining and settlement of industrial disputes, became effective. Sept. 10, Appointment of The Rt. Hon. L. S. St. Laurent as Minister of Justice. Sept. 30, John Bracken tendered his resignation as national Leader of the Progressive Conservative Party in Canada. Oct. 2, George A. Drew, K.C., elected as Leader of the Progressive Conservative Party. Oct. 6-27, Representatives of Canada and Newfoundland met at Ottawa to discuss final arrangements for Newfoundland's entry into Confederation as the tenth Province of Canada. Oct. 20, United Nations General Assembly at Paris approved Canadian-sponsored plan for atomic energy control. Nov. 14, A son (Prince Charles Philip Arthur George) born to Their Royal Highnesses, Princess Elizabeth and Prince Philip. Nov. 15, Governor General Viscount Alexander accepted the resignation of retiring Prime Minister W. L. Mackenzie King. The Rt. Hon. L. S. St. Laurent took the oath as President of the Privy Council and became Prime Minister of Canada. Dec. 11, Representatives of Canada and Newfoundland signed the agreement under which Newfoundland, after approval by the Parliament of Canada and the Government of Newfoundland and confirmation by the Parliament of the
- United Kingdom, was to enter Confederation as the tenth province of Canada.
1949. Jan. 26, Opening of the fifth session of the Twentieth Parliament at Ottawa. Feb. 18, Royal Assent given to the Terms of Union with Newfoundland by the Federal Parliament. Feb. 21, Newfoundland's Commission Government announced approval of the Terms of Union with Canada. Mar. 10, The Provincial Government of Quebec banned the manufacture and sale of margarine. Mar. 23, Royal Assent given to the North America Bill passed by the British Parliament to the union of Canada and Newfoundland. Mar. 31, Newfoundland became the tenth Province of Canada. Apr. 1, Sir Albert J. Walsh appointed first Lieutenant-Governor of the Province of Newfoundland. Apr. 4, Canada signed the North Atlantic Treaty at Washington, D.C. Apr. 12, Joint United States-Canada Industrial Mobilization Committee established. Apr. 18, Ireland (Eire) became the Republic of Ireland. Apr. 21, Meeting of Commonwealth Prime Ministers held at London, England. The Hon. L. B. Pearson, Minister for External Affairs, represented Canada. Apr. 28, India decided to become a sovereign independent republic within the Commonwealth. Apr. 30, Dissolution of fifth session of Twentieth Parliament. May 11, Canada, together with six other countries, approved membership of Israel in the United Nations. May 17, Canadian Government granted full recognition as a state to Israel. May 18, Spring session of the Third General Assembly of the United Nations, held at Flushing Meadows, New York, ended. May 23, The Foreign Ministers' Conference, with representatives from the United Kingdom, United States, France and U.S.S.R., met at Paris. The existence of a new state to be known as the Federal Republic of Germany was proclaimed at Bonn. May 27, First general election in Newfoundland as a Province of Canada. The Liberal Party returned to office under Premier J. R. Smallwood. May 31-June 11, Third Annual Conference of the International Federation of Agricultural Producers held at Guelph, Ont., with representatives from 23 nations. June 7-20, Third Assembly of the International Civil Aviation Organization held at Montreal; Brigadier C. S. Booth head of Canadian delegation. June 9, Provincial general election in Nova Scotia; The Hon. Angus L. Macdonald returned to power. June 27, Federal general election; Liberals under leadership of The Rt. Hon. L. S. St. Laurent returned to power. July 8-10, Meeting of Finance Ministers at London, England, pledged United Kingdom, United States and Canada to review economic and trading policies; The Hon. D. C. Abbott represented Canada. July 13-18, Conference of Commonwealth Finance Ministers at London, England, to discuss fall in sterling reserves; The Hon. D. C. Abbott represented Canada. July 13, Opening of first Provincial Legislature of Newfoundland at St. John's. Aug. 17-Sept. 6, United Nations Scientific Conference on Conservation and Utilization of Resources held at Lake Success, N.Y.; Dr. H. L. Keenleyside represented Canada. Aug. 24, Formal proclamation of North Atlantic Pact at Washington, D.C.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume. Appointments made after this Chapter went to press are given in the Annual Register at the end of this volume.

The government of Canada is provided for by the British North America Act (30-31 Vict., c. 3) of 1867.\* This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the constitution of Canada. Subsequent sections of this Chapter describe the processes by which the constitution has developed and the institutions, as at present constituted, by which Canada is governed.

The several stages in the development of the status of the Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926, which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as a complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and, more recently in the United

\* See pp. 40-60 of the 1942 Year Book for text of the original B.N.A. Act and notes regarding amendments and modifications thereto.

Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

Thus, Canada has, under the Crown, equality in status with Great Britain and the other Dominions in both domestic and foreign affairs; its government advises the Crown in the person of the Governor General on all matters relating to Canada; it has membership in the United Nations; makes its own treaties; appoints its own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the Canadian people; and maintains its own military, naval and air forces. In short, Canada has achieved the full status of democratic nationhood within the Commonwealth of Nations.

## **PART I.—THE CONSTITUTION AND GENERAL GOVERNMENT OF CANADA**

The two basic characteristics of the Canadian constitution are that it is federal and that, apart from the federal aspect, it is modelled closely on the British Parliamentary system.

Federation occurred in 1867 with the union of three colonies, Nova Scotia, New Brunswick, and Canada, which was divided into two provinces, Ontario and Quebec. The colony of British Columbia joined in 1871 and Prince Edward Island in 1873. Three other provinces were created out of Hudson's Bay Company lands acquired in 1868: Manitoba in 1870, and Saskatchewan and Alberta in 1905. The Dominion of Newfoundland by a majority vote in a national referendum, taken on July 22, 1948, decided to enter Confederation and union took place Mar. 31, 1949.

The federal aspect of the constitution is defined by the British North America Act, 1867, and amendments. This Act divides the field of legislative and executive power between national and provincial authorities. It provides also the legal framework for national and provincial political institutions, but leaves the provinces full discretion to amend their own constitutions except with respect to the office of Lieutenant-Governor, the formal head of provincial government, and except that no provincial legislative authority may invade the field allotted by the Act to the Parliament of Canada.

### **Section 1.—The Evolution of the Constitution prior to Confederation**

The process of the development of free government in the Dominion of Canada prior to Confederation is given in an article appearing at pp. 34-40 of the 1942 Year Book. Also in an Appendix to that article, pp. 40-60, the text of the British North America Act is presented.

### **Section 2.—The Development of the Constitution since Confederation**

An article bringing the developments since Confederation up to date is published at pp. 41-47 of the 1943-44 Year Book. See also list of Special Articles under "Constitution and Government" at the beginning of this volume.

### Section 3.—The Constitutional Development of Newfoundland prior to Union with Canada, 1949\*

The history of government in Newfoundland goes back 400 years to the time when Newfoundland was an international fishing station, regarded officially in England as a "nursery for seamen" and a valuable fishery and by the West Country fish merchants of England as their special preserve. Down to 1800 the three main elements in the constitutional struggle over Newfoundland were the mercantile and naval policy of England with regard to the colonies, the influence of the West Country merchants in England and the agitations of the steadily growing population of the Island for local institutions.

The so-called Fishing Admirals constituted the earliest, if rudimentary, government. Their authority was at first based upon local custom but the seat of control over the fishery was at London. A statute of 1548 prevented Admiralty officers from exacting bribes from fishermen proceeding to Newfoundland, Iceland and Ireland. The Admirals, who seem to have operated under the wing of the Navy, remained entrenched despite an attempt of the English Government to establish some order through courts of Vice-Admiralty in 1615.† A Star Chamber rule of 1633 explicitly provided that the captain of the first ship to arrive in harbour should be Admiral of the harbour for the season. An Act of William III in 1699 gave the Admirals specific, though minor, judicial functions.

The Admirals were supposed to keep a record of all fisheries matters, act as judges in disputes and, in general, have full control in the harbour. Their justice was rough and often harsh. The only time of hope for the settlers during this early period was the short-lived government of the fishery by commission during the interregnum of Oliver Cromwell.

The first advance for the settlers was the appointment of Capt. Henry Osborne by the Crown as Governor of the Island in 1729.§ He was also appointed Commander-in-Chief of the Island. A local assembly modelled on the New England 'town meeting' had been set up in 1711 but it was a rather academic affair and lasted only two years.

The naval governors, of whom Osborne was the first, were concerned not only with executive functions arising from statutes, treaties and governmental instructions, or from their powers as Royal Governors, but also with their role under Admiralty instructions in the naval strategy against France. A contemporary writer‡ noted that "the government such as it is resides in the Admiralty". William Knox, a senior official in London, declared before Parliament a few years later: "The Island of Newfoundland has been considered, in all former times, as a great ship moored near the Banks during the fishing season, for the convenience of English fishermen. The Governor was considered as the ship's captain, and those who were concerned in the fishery business as his crew, and subject to naval discipline while there, and expected to return to England when the season was over".

\* Prepared by the Department of External Affairs, Ottawa.

† See p. 89.

§ The sovereignty of the United Kingdom over Newfoundland had been recognized by the Treaty of Utrecht, 1713.

‡ Dr. Gardiner of Boston in 1784.

Unfortunately, Osborne and his successors were appointed by exercise of the royal prerogative. This was not theoretically wrong. The Admirals had a semblance of statutory authority and the supremacy of Parliament over the prerogative of the Crown had by now been established. The failure of the Government to secure from Parliament the statute necessary for the maintenance of Government and law in the Island may be attributed largely to the influence of the West Country merchants. The Fishing Admirals challenged, often with violence, the justices of the peace and the Governor resided in Newfoundland only during the fishing season. The creation of a Supreme Court by statute in 1791, however, exemplified the abandonment of the struggle by the Fishing Admirals and of the realization by the merchants in England that they could no longer hope to unseat the Royal Governors.

While there was now an executive authority (though little more than an agent of the authorities in London) and after 1791 a judicature, a local legislature was lacking. The demand for a voice in law-making and policy took the form of a desire not for seats in the United Kingdom Parliament but for a local legislature to deal with local affairs. In this Newfoundland followed the line of development of other British colonies.

In 1803 the Governor, Lord Gambier (1802-04), urged "the establishment of a legislative power in Newfoundland, similar to that which has been found necessary to the prosperity and good government of other parts of His Majesty's foreign dominions".\* Likewise Governor Duckworth (1810-12) recommended that a local authority be created. Shortly afterwards, in 1817, the settlers were conceded their wish that the Governor should reside on the Island throughout the year.

Representative government was granted in 1832, despite the antagonism of the West Country merchants. Its form—though not its practice—existed down to the institution of Government by Commission in 1934. The executive authority was vested in the Governor. He was assisted by an Executive Council, whose functions were purely advisory. The legislature was made up of a Legislative Council and a House of Assembly. The Legislative Council† was nominated by the Governor, while the Assembly was elected by popular vote. The two were empowered to make laws for the colony subject to the ultimate approval of the King-in-Council in London.

The Governor continued to receive instructions from London as a colonial governor. He was required to refuse in certain cases his assent to local measures. He was not yet required to accept the advice of ministers responsible to the local legislature.

The evolution of responsible government and progress towards the conditions confirmed by the Statute of Westminster of 1931, worked inside this form in a way familiar to the self-governing countries of the Commonwealth.

The newly-fledged popular assembly was not content with the change made in 1832. The Executive Council contained none of the persons elected by franchise. It consisted entirely of officials nominated by the Governor, including the Chief Justice of the Supreme Court, the Attorney General and the commander of the land forces. From the outset the Executive Council and the Assembly clashed. Although

\* Lord Gambier to Lord Hobart, December 12, 1803. The Government had already done so for Nova Scotia.

† A kind of Upper House.

in 1838 non-official members were added to the Council, a deadlock ensued.\* In 1841 the Government in London suspended the new constitution and instituted the Amalgamated Legislature, in which the members of both Houses sat together. This experiment proved a complete failure and, in 1848, the original constitution was restored.

Political events in the United Kingdom had led to the Reform Bill of 1832, the beginning of a long process of extending the popular basis of government, and the repeal of the Corn Laws, an important step in the direction of free trade. Thus the continued agitations of the people of Newfoundland for an executive responsible to their own legislature fell on more receptive ears. The principle of responsible government was finally conceded in 1855† as had already been done for the colonies of British North America on the mainland.

Newfoundland now had a Cabinet advising the Governor and responsible to the elected Assembly. General elections henceforth determined the nature and the term of the Executive Council, whose advice the Governor was obliged to accept within the ambit of his executive powers.

The legislature was nevertheless still a local one. Its measures had no effect beyond the territory of Newfoundland, nor within the territory itself where they conflicted with 'Imperial Statutes' extending to the colony. The conduct of foreign affairs continued in the hands of the Foreign Office in London and as between St. John's and London took chiefly the form of protests over the apparent sacrifice of the interests of Newfoundland to those of France in fisheries matters. The "Labouchere Letter"§ records an advance for the colony in foreign affairs in these terms, "The proposals contained in the Convention [of 1857 between the United Kingdom and France] having been unequivocally refused by the Colony, they will, of course, fall to the ground . . . the consent of the community of Newfoundland is regarded by Her Majesty's Government as the essential preliminary to any modification of their territorial or maritime rights". Confederation discussions with the other British North American colonies too were conducted not through London but by representatives from Newfoundland.

While in theory the laws enacted by the local legislature could be repealed or altered by the Parliament in London, legislation of the United Kingdom Parliament relating to purely internal matters in the colony came to be regarded as unconstitutional. This practice was one example of the growth of local autonomy within the subordinate constitutional relationship of 'the Dominions' with the United Kingdom. These developments were explicitly recognized in 1931 by the Statute of Westminster. Although Newfoundland was named a 'Dominion' by the Statute, it did not adopt the clauses that provided for extra-territorial legislation by 'the Dominions' and for the extension to them of United Kingdom legislation only by their own request and consent.

At the time that the legislature adopted the Amulree Report‡ of 1933, the constitutional forms of Newfoundland were little changed from those of 1855.

\* This situation incidentally gave rise to the case of *Kielly v. Carson*, which established the extent of the privileges of colonial parliaments generally.

† Royal instruction to the Governor of Newfoundland, May 5, 1855.

§ Mr. Henry Labouchere, Colonial Secretary in the United Kingdom Government, to Governor Darling, 1857.

‡ The Report of the Royal Commission asked for by the Newfoundland Legislature owing to the severe financial crisis in the country.

In their practical operation, however, they constituted a full parliamentary democracy on the British model. The Governor's position was akin to that of the King, whom he represented. The executive business was carried on by a Cabinet formed from the party having and retaining a majority in the elected Assembly. The Cabinet when meeting to form policy was a Committee of the Executive Council under the chairmanship of the Prime Minister. The Council, meeting for the formal exercise of its powers, chiefly to approve minutes of the Committee, was presided over by the Governor acting as the Governor in Council.

The Assembly remained the elected House. The electoral franchise extended to men at twenty-one years of age and women at twenty-five, provided they were British subjects of at least two years residence. The Legislative Council remained a body appointed by the Governor on the advice of the Cabinet.

Generally speaking, all bills required the approval of both Houses before receiving the Governor's assent, although in certain cases the Council could not bar the passage of a measure from the Assembly. The rules of procedure of the two Houses were based upon those of the Parliament of the United Kingdom.

The adoption of the recommendations of the Royal Commission entailed the suspension of the constitution of 1855\* and the institution of Government by Commission. By Letters Patent based upon the Newfoundland Act, 1933, of the United Kingdom Parliament, Newfoundland was to be governed by a Governor and six Commissioners appointed by the Crown, three from Newfoundland and three from the United Kingdom. The Governor was both the King's representative and the chairman of the Commission. The Commission had both executive and legislative powers. Bills were published before enactment; otherwise the popular will was not ascertained by any constitutional procedure. The proceedings of the Commission were subject to supervisory control by the United Kingdom Government and the Governor-in-Commission was responsible to the Dominions Office for good government. Responsible government would be restored on request from the people of Newfoundland as soon as the country was self-supporting again.

This sudden intrusion of autocracy into Newfoundland after generations of responsible self-government may be summed up as an administrative expedient designed to meet a critical condition of the times. Its effect upon the constitutional status of Newfoundland seems ambiguous. The Statute of Westminster was never amended to exclude Newfoundland from the provisions applicable to it at the time of enactment. Thus, Newfoundland became a 'Dominion' with suspended status. This form of government remained until Mar. 31, 1949, when Newfoundland became united with Canada as a Province.

On two occasions previous to 1948, Newfoundland entered into negotiations with a view to joining the Canadian Confederation. In 1869 a pro-confederation movement ended with the defeat of the government that favoured the measure. Another attempt ended when a delegation sent to Ottawa in 1895 failed to secure agreement on financial terms. Fifty years later the future government of Newfoundland became an issue and in a national referendum held in 1948 a majority

\* As set forth subsequently in Letters Patent of 1876, amended by Letters Patent in 1905.

of the voting electors in a heavy poll decided, on the second ballot, in favour of confederation.\* The Terms of Union, signed on Dec. 11, 1948, restored the Executive Council and the House of Assembly, though not the Legislative Council,† subject to the terms of the British North America Acts. Within the provincial sphere of jurisdiction the new government works on the parliamentary model as before, with a Lieutenant-Governor appointed by the Governor General in Council. The new franchise extends to women aged 21 years or more.

**Administration of Justice.**—The Fishing Admirals were required to act as judges in all disputes but the seizure, trial and punishment of offenders by these rough seafaring adventurers constituted a very crude judicial process. There was no clear system of law and little guidance was afforded to either judge or accused. Sir Humphrey Gilbert proclaimed at St. John's in 1583 that the Island was "to be governed by such lawes as by good advise should be set down which in all points (so neere as might be) should be agreeable to the Lawes of England", but this evidently came to nothing. The attempts of companies to colonize the Island, and with it to establish laws, were short-lived. Likewise the despatch of Sir Richard Whitborne to Newfoundland in 1615 to hold Courts of Vice Admiralty, while it was the first primitive attempt to create a formal court of justice in Newfoundland, was a legal farce, lacking any public funds or power to execute sentence. Whitborne inquired into disorders committed on the coast and delivered the presentments of the captains of 170 English ships to the High Court of Admiralty. The captains merely avowed that the disorders would cease.

The Star Chamber Rules of 1633 prohibited a number of acts, enjoined the Fishing Admirals to enforce them and to preserve the peace. Cases of killing or of stealing goods worth 40 shillings or more were to be sent for trial in England. The rules gave jurisdiction over infringements by ship-owners to courts in England.

A regulation of Charles II in 1670 required that persons accused of any crime be brought to England for trial. This proved impracticable and was altered in the next century. Meanwhile prisoners were often unable to procure witnesses, owing to expense or the unwillingness of witnesses to leave the fishery.

The Act to Encourage the Trade to Newfoundland of William III confirmed the ancient custom of Admirals. It required them to "settle differences" between ships and also between fishermen and inhabitants. There was given a right of appeal to the commander of the "ships of war appointed as convoys", if indeed one lay near enough. The Act, noting that felons had often escaped punishment "because the trial of such offenders hath been ordered before no other court but the Lord High Constable and Earl Marshall of England", provided "that all robberies, murders, etc., committed there (i.e., Newfoundland) may be tried in any shire of England by virtue of the King's commission of oyer and terminer and gaol delivery‡ according to the laws of this realm". Other offences continued, presumably, to be dealt with under the rough-and-ready justice of the Admirals. The Admirals

\* Two national referenda were held. On June 3, 1948, responsible government obtained a plurality but not a majority over the continuation of commission government and confederation with Canada. In the second ballot, held on July 22, 1948, continuation of commission government, having received the least votes, was not included.

† The Legislature of the Province may do so.

‡ The customary commission which empowered Royal Justices travelling on circuit to "deliver the gaols" of any prisoners held for trial and to "hear and determine" (i.e. pronounce judgment on) their cases.

were given the task of enforcing, both in harbour and on shore, the requirements of the Act. No penal clause was attached and words that might have created a court were carefully avoided.

In spite of the appointment of Osborne as Royal Governor in 1729, the Government in London delayed the enactment of a statute for the governing of the Island. For sixty more years the justices of the peace tried to keep order despite the Fishing Admirals and the absence of properly settled laws. It was intended that a skilled lawyer should be sent out each year with a commission of oyer and terminer. However, Osborne was merely sent copies of the statutes and an ancient treatise on law. He sent back to London "a copy of the Commission given to justices drawn up in the best manner he was capable of doing not being well acquainted with forms of such Commissions nor with powers granted him not having time enough to prepare himself with them before he received His Majesty's command to begone".\* The Admirals continued to seize and punish offenders. They frequently set aside the new magistrates, who were often ill-equipped and who sometimes assumed tasks beyond the administration of justice for which a statute would have provided proper authority.†

The Governors sat in open court until 1789, applying "quarter-deck law".§ The Naval Governor customarily named a subordinate officer as his surrogate or Deputy Governor, one of whom was instructed by Capt. George Rodney (later Lord Rodney) as follows:—

"In case any other complaints shall appear before you of crimes and misdemeanours committed upon the land you have full power to adjudge and determine the same according to the custom of the country and the best of your judgment."

In 1750 the Governor's Commission included authority to set up a court of oyer and terminer. This step entailed trial by jury in Newfoundland. Each case had to be reported to London before sentence could be executed.

It was recorded in 1784 that the courts in Newfoundland were the local justices, the Court of Oyer and Terminer, the Court of Vice-Admiralty and the "Justice Courts", held twice a week in St. John's at the instance of the Governor. The Governor seemed to make the Judge of Admiralty head of his Law Department.‡ The judges of the Court of Oyer and Terminer usually included the Judge of Admiralty (who presided), two or three justices of the peace, and one or two merchants. According to contemporary practice, judges were paid by fees, which were heavy.

At length a great indignation arose among the settlers against this system. One result was a suit against Governor Sir John Elliott on his return to England in 1789, and the end of the Governor's practice of sitting in open court. The next Governor, Admiral Milbanke, created in 1789 a (civil) Court of Common Pleas with

\* Despatch to the Duke of Newcastle, October 14, 1792.

† For example, the summoning of merchants and masters to pay wages.

§ D. W. Prowse, *A History of Newfoundland*, London, 1895.

‡ Dr. Gardiner of Boston; he noted with disgust that the judge of the time was "keeper of a gin-shop".

regular justices instead of justices of the peace. This led to a parliamentary investigation of the judicial system and to the Act of 1791. The Act created a court of civil jurisdiction at St. John's with a Chief Justice, to continue for one year. In 1792 the court was designated the Supreme Court of Judicature of Newfoundland. The Court was prolonged yearly against the opposition of the West Country merchants until 1809 when it was made permanent. The Chief Justice and soon afterwards the magistrates were given regular stipends. In 1824 came the Act for the Better Administration of Justice, which provided for a Supreme Court of Newfoundland having all civil and criminal jurisdiction in Newfoundland and jurisdiction over all crimes committed on the banks of Newfoundland or any seas or island to which ships repaired from Newfoundland for carrying on the fishery. The Court was to have a Chief Justice and two puisne judges. The Governor was empowered to establish three annual circuit courts. From these there was a right of appeal to the Supreme Court, with which the circuit courts shared a similar jurisdiction save over certain crimes and violations of certain trade and revenue statutes. In the last resort, appeals could be made to the Privy Council in London. Provision was also made for a civil court on the Coast of Labrador. The Supreme Court was set up in 1826. The state of affairs recorded in 1784 was thus remedied and the administration of justice was entrusted to the Colony.

The Consolidated Statutes of Newfoundland of 1916 provided for a Department of Justice. The Minister of Justice was also Attorney General and was charged with the administration of justice.

The supreme civil and criminal jurisdiction of the Supreme Court and the right of appeal from it to the Privy Council were continued. The Court administered both law and equity. It had been made a Court of Admiralty in 1890 and was also a Court of Probate. The bench consisted of a Chief Justice and two puisne judges. The grand jury was retained. Criminal trials were held before a court of one judge with a petty jury of twelve. Civil cases could be heard before one judge with or without a jury and with a right of appeal to the full bench.

The justices of this Court travelled on circuit from St. John's by rail in the spring and autumn to serve the larger towns, including Grand Falls and Corner Brook. The boat circuit, which had been abandoned between 1931 and 1938, was given up again in 1940.

The Central District Court was given a limited civil jurisdiction in the central district comprising St. John's and vicinity with a right of appeal to the Supreme Court. The Court was to have one judge who would also be *ex officio* stipendiary magistrate for the district.

Stipendiary magistrates replaced the old courts of quarter sessions composed of justices of the peace sitting together. A complete reorganization of the stipendiary magistracy was undertaken in 1935. At the time of union in 1949 there were seven district magistrates, whose districts covered the whole of the Island outside the central district. The magistrate at St. Anthony also makes an annual tour of the Labrador Coast. Most of the magistrates have been laymen. Under the 1935

scheme they exercise, in addition to their judicial function, a general supervision over government activities in their district\* and are a channel of communication between the government and the inhabitants.

The Court of Labrador is in practice obsolete.

Since 1832 the law administered in Newfoundland has included the United Kingdom statute law up to 1832, together with subsequent local statutes and United Kingdom statutes extending to Newfoundland.† The common law was that of the United Kingdom. The general criminal law of the United Kingdom was adopted by statute subject to any variations made by local enactments.

The system of 1916 with the new magistracy comprised the system of administration of justice with which Newfoundland entered into Confederation.

**Municipal and Local Government.**—Municipal and local government has been slow to develop in Newfoundland. The communities are small and scattered. Cash incomes have until recently been low. The people have been unaccustomed and indeed opposed to direct taxation. Few municipalities impose property taxes. In the past the provision and control of local services has, over wide areas, fallen to the central government, which derived its chief revenues from indirect taxes.

Up to 1942, St. John's was the only incorporated municipality among the urban areas. Its city council was constituted in 1888. Municipal elections are held every four years.

In 1933 the Local Government Act was enacted. It was not until 1942 that the first two municipalities outside St. John's came into being. By July, 1949, there were 21 incorporated municipalities, apart from St. John's, having populations between 1,000 and 2,000. The total population possessing municipal government in 1948 was about 78,500; of these 43,000 were in St. John's. Corner Brook and Grand Falls are administered by the pulp and paper companies situated there, and Buchans by the mining company.

Newfoundland has had no organized units of local government comparable to townships or counties such as exist in the other Eastern Provinces for the administration of welfare, health, road and education services, judicial administration, enforcement of law and registrations. In Newfoundland local school boards have no authority to impose taxes; they are simply appointed administrative boards. Nevertheless there exists a system of elective road boards for the encouragement of local initiative in road building and maintenance. The administrative function of the stipendiary magistrates has already been mentioned.

It is to be expected that municipal and local government institutions will gradually increase. The main limiting factors will probably be the small size of most of the settlements and their wide distribution along about 6,000 miles of sea-coast, together with the low real-property values characteristic of fishing and non-industrial communities.

\* Compare the functions assigned to justices of the peace by the Naval Governors.

† Newfoundland did not adopt the provisions of the Statute of Westminster that would have enabled its legislature to repeal such statutes, or to have them extended in future only by its request and consent.

## PART II.—ORGANIZATION

The Federal Parliament consists of the Governor General and the Privy Council (of which the Cabinet, or Ministry, is an active committee responsible to the Legislature for all matters of policy) at the head of the Executive Branch, the Senate and House of Commons comprising the Legislative Branch, and the courts representing the Judicial Branch of government. There is no clearly defined separation of powers since those members of the Privy Council who are members of the Cabinet, have seats in the Legislature, and within that body, in turn, the Senate exercises some judicial functions. Each of the provinces has a similar system. In both Federal and Provincial Governments there is responsible government, whereby the Ministry is answerable for its conduct to the elected representatives of the people in the House of Commons or the Legislative Assemblies. This device is not mentioned in the British North America Act but, except for some modifications to meet local conditions, British practice has been followed. Under the Constitution the courts administer the law as it is drawn up and amended by the Legislature.

### Section 1.—The Federal Government

#### Subsection 1.—The Executive

**The Governor General.**—The Governor General is appointed by the King usually for a term of five years. He is bound by the terms of his commission and instructions and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues and dissolves Parliament, and assents to or reserves bills. New Letters Patent came into force on Oct. 1, 1947, whereby it is legally possible for the Governor General, on the advice of Canadian Ministers, to exercise any of the powers and authorities of the Crown in respect of Canada, without the necessity of a submission being made to the King.

**Salary and Allowances.**—The Governor General receives a salary of £10,000 per annum charged against the consolidated revenue. He also receives a travelling allowance of \$50,000 annually.

#### 1.—Governors General of Canada, 1867-1949

**The Ministry.**—Canada's system of government is based upon that of the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate) is responsible to Parliament. The Cabinet is actually a

committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

### 2.—Prime Ministers Since Confederation

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 - Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 - Oct. 16, 1878

<sup>1</sup> The ordinary legal limit of duration for each Parliament is five years.

<sup>2</sup> Duration of Parliament in years, months and days.

The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50).

<sup>3</sup> Date of general election.

<sup>4</sup> Writs returnable.

<sup>5</sup> Dissolution of Parliament.

<sup>6</sup> During the war years

Parliament was kept in almost continuous session. When prorogation took place it was followed immediately by a new session. During long adjournments provision was made whereby the Speaker could reconvene Parliament before the date previously set for reassembly.

<sup>7</sup> Life of Legislature not expired at time of going to press.

<sup>8</sup> Life of First Session not expired at time of going to press.

## Subsection 2.—The Legislature

The Legislative Branch of government, consisting of the Senate and House of Commons, is responsible for the enactment of all legislation. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which restricts to the House of Commons the introduction of bills for the appropriation of any part of the public revenue or the imposition of any tax or impost. Bills must pass both Houses and receive the Royal Assent before becoming law. In practice most Public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of Public Bills in the Senate. For some years past all Private Bills have originated in the Senate.

**The Senate.**—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of the Dominion, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced at pp. 47-49 of the 1940 edition of the Year Book and is summarized, by provinces, in Table 6. Members of the Senate receive a sessional indemnity of \$4,000. In addition they receive an annual expense allowance of \$2,000 paid at the end of each calendar year.

**The House of Commons.**—In Sect. 37 of the British North America Act of 1867 it was provided that "The House of Commons shall, subject to the provisions of this Act, consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick". Further, under Sect. 51, it was enacted that, after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to certain rules set out in the original Act.

The representation of the provinces in the Dominion Parliament as at 1867 and the readjustments that took place with the admission of the newer provinces into Confederation and with each decennial census up to 1931, are outlined at pp. 57-59 of the 1946 Year Book. The number of representatives of each province elected at each of the 21 general elections since Confederation is given in Table 8.

*Redistribution of Parliamentary Constituencies, 1947.*—After the completion of the 1941 Census the redistribution required by the British North America Act following each decennial census was postponed. A resolution to that effect was presented to Parliament and forwarded to London in the form of an Address to His Majesty the King. His Majesty caused a Bill to be laid before the Parliament of the United Kingdom for the enactment of the provisions of the resolution; this was duly passed through all stages by July 22, 1943. The Bill provided that "notwithstanding anything in the British North America Acts, 1867 to 1940, it shall not be necessary that the representation of the provinces in the House of Commons [Canadian] be readjusted, in consequence of the completion of the decennial census taken in the year One Thousand Nine Hundred and Forty-One, until the first session of the Parliament of Canada commencing after the cessation of hostilities between Canada and the German Reich, the Kingdom of Italy and the Empire of Japan". During the first session of the Twentieth Parliament, the House of Commons and the Senate of Canada petitioned the Imperial Government, requesting an amendment to Section 51 of the British North America Act. As a result, that Section of the Act was repealed and the following substituted therefor:—

- "(1) The number of members of the House of Commons shall be Two hundred and fifty-five and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following Rules:
- (a) Subject as hereinafter provided, there shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by Two hundred and fifty-four and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder if any, after the said process of division.
  - (b) If the total number of members assigned to all the provinces pursuant to Rule One is less than Two hundred and fifty-four, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under Rule One commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is Two hundred and fifty-four.
  - (c) Notwithstanding anything in this section, if upon completion of a computation under Rules One and Two, the number of members to be assigned to a province is less than the number of senators representing the said province, Rules One and Two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.
  - (d) In the event that Rules One and Two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which Rules One and Two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which Rules One and Two have ceased to apply and the number Two hundred and fifty-four shall be reduced by the number of members assigned to such province pursuant to Rule Three.
  - (e) Such readjustment shall not take effect until the termination of the then existing parliament.
- "(2) The Yukon Territory as constituted by c. 41 of the Statutes of Canada, 1901, together with any part of Canada not comprised within a province which may from time to time be included therein by the Parliament of Canada for the purposes of representation in parliament, shall be entitled to one member."

Accordingly, by the Representation Act, 1947 (11 Geo. VI, c. 71) the total membership in the House of Commons was increased from 245 to 255 to be effective at the following general election. The representation of the various provinces is shown in Table 8.

Under the terms of a bill, assented to on Feb. 18, 1949, and intituled, An Act to approve the Terms of Union of Newfoundland with Canada, provision was made for the Province of Newfoundland to be represented by seven members in the House of Commons. This brought the number of Members of Parliament up to 262.

**Indemnities and Allowances.**—Members of the House of Commons are paid a sessional indemnity of \$4,000. In addition, they receive \$2,000 as an annual expense allowance, paid at the end of each calendar year. This allowance, except in the case of Ministers of the Crown and the Leader of the Opposition, is not subject to income tax. The remuneration of a Cabinet Minister is \$10,000 a year, the Prime Minister receiving \$15,000, in addition to the sessional indemnity each receives as a Member of Parliament. The Leader of the Opposition also receives \$10,000 a year in addition to his sessional indemnity. Cabinet Ministers are also entitled to a motor-car allowance of \$2,000. The Speakers of the Senate and of the House of Commons receive, besides their sessional indemnity, a salary of \$6,000 and a motor-car allowance of \$1,000 and are also entitled to \$3,000 in lieu of residence. Parliamentary Assistants to the Ministers of the Crown, of whom there were 10 as at Sept. 15, 1949, receive \$4,000 sessional indemnity as Members of Parliament, \$4,000 a year as Parliamentary Assistants and the \$2,000 allowed to all other Members of Parliament.

**9.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Twenty-First General Election, June 27, 1949.**

Speaker..... The HON. W. ROSS MACDONALD, K.C.  
 Clerk of the House..... LEON J. RAYMOND, O.B.E.  
 Leader of the Opposition..... GEORGE A. DREW

NOTE.—This information, except the population of constituencies, has been supplied by the Chief Electoral Officer, Ottawa. Party affiliations are unofficial. The vote is summarized by provinces in Table 10, p. 107. The leaders of the political parties are indicated by asterisks(\*) and Parliamentary Assistants by footnotes. Footnotes show changes up to the time of going to press with this part of the Year Book; subsequent changes will be found in Appendix II.

<sup>1</sup> Successful candidate.

<sup>2</sup> Parliamentary Assistant to the Minister of Finance.

<sup>3</sup> Appointed to Senate Sept. 7, 1949, and his seat remained vacant at Sept. 15, 1949.

**The Opposition.**—The Opposition occupies an essential place in constitutions based on the British Parliamentary System. Like many other institutions such as that of the premiership, for instance, it takes its place with the many unwritten arrangements, tested by time, that have been accepted and become firmly established.

The choice of the Canadian electorate not only determines who shall govern Canada but, by deciding which party receives the second largest number of seats in the House of Commons, it settles which of the major parties becomes the Official Opposition. The function of the Leader of the Opposition is to offer intelligent and constructive criticism of the government of the day.

When criticism by the Opposition becomes sufficiently effective it can overthrow the existing government and the Leader of the Opposition might then, as a result of the ensuing election, find himself the Prime Minister.

Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in Canada in 1927. The Senate and House of Commons Act of that year provided for an annual salary to be paid to the Leader of the Opposition in addition to his indemnity as a Member of the House. (See p. 100.)

**The Franchise.**—Legislation concerning the right to vote at Dominion elections is outlined at pp. 72-73 of the 1947 Year Book.

The present franchise laws are contained in the Dominion Elections Act, 1938 (2 Geo. VI, c. 46, as amended by 6 Geo. VI, c. 26 and 12 Geo. VI, c. 46). The franchise is conferred upon all British subjects, men and women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a Dominion election, and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Classes of persons denied the right to vote are:—

- (1) Judges appointed by the Governor General in Council;
- (2) The returning officer for each electoral district;
- (3) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (4) Indians ordinarily resident on an Indian reservation who did not serve in the First or Second World Wars;
- (5) Persons restrained of their liberty or management of their property by reason of mental disease;
- (6) Eskimos, whether born in Canada or elsewhere;
- (7) Doukhobors, residing in the Province of British Columbia, whether born in Canada or elsewhere;
- (8) Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

The Act to amend the Dominion Elections Act, passed on June 15, 1948, removed the provisions previously in effect which disqualified Japanese or other persons by reason of race from voting at Dominion elections, also inmates of institutions maintained by any government or municipality for the housing of the poor.

Regulations, known as the Canadian Defence Service Voting Regulations, were drawn up and promulgated in 1948 prescribing voting procedure for personnel of the Permanent Force of the Army, Navy and Air Force. The regulations provide that these voters cast their ballots for candidates in the constituency in which they last resided prior to enlistment.

### 10.—Voters on the Lists and Votes Polled at the General Elections of 1935, 1940, 1945 and 1949

NOTE.—Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 will be found at p. 82 of the 1926 Year Book; those for 1926 at p. 66 of the 1945 edition and those for 1930 at p. 94 of the 1948-49 edition.

<sup>1</sup> Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1945, 24,540 voters on the list cast 38,812 votes. <sup>2</sup> Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1945, 85,262 voters on the list cast 105,618 votes.

### Subsection 3.—The Judiciary

#### The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision the Parliament of Canada has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

**Supreme Court of Canada.**—This Court (first established in 1875 by 38 Vict., c. 11, and now governed by the Supreme Court Act, R.S.C. 1927, c. 35) consists of a chief justice, who is called the Chief Justice of Canada, and six puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or House of Commons on private bills referred to the Court under any rules or orders of the Senate or House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$2,000. Where the amount in controversy does not exceed \$2,000 an appeal may be brought with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may, in special cases, grant leave to appeal. Appeals in criminal cases are regulated by Sects. 1023 and 1025 of the Criminal Code. Appeals from Dominion courts are regulated by the statutes establishing such courts.

The judgment of the Supreme Court of Canada in criminal cases is final and conclusive but in civil cases a further appeal may be taken to the Judicial Committee of the Privy Council with leave of the Privy Council.

**Exchequer Court.**—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but it is now a separate court and is governed by the Exchequer Court Act (R.S.C. 1927, c. 34). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and House of Commons. They cease to hold office upon attaining the age of 75 years. One of the puisne judges is the Chief Commissioner of the Board of Transport Commissioners. The Court sits at Ottawa and also at any other place in Canada for which sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1927, c. 158). Before proceedings can be taken against the Crown a fiat from the Governor General must be obtained.

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500.

The Exchequer Court also exercises admiralty jurisdiction in Canada. Admiralty jurisdiction was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and the admiralty jurisdiction is now governed by the Admiralty Act (24-25 Geo. V, c. 31). Under this statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district and he exercises admiralty jurisdiction within his district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or directly to the Supreme Court of Canada.

**Miscellaneous Courts.**—*Railway Act.*—The Railway Act (R.S.C. 1927, c. 170) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (2 Geo. VI, c. 53), the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

*Bankruptcy Act.*—By virtue of para. 21 of Sect. 91 of the British North America Act, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1927, c. 11) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

*Farmers' Creditors Arrangement Act.*—Under the Farmers' Creditors Arrangement Act, 1943 (7 and 8 Geo. VI, c. 26), the county or district courts of the provinces are established as courts for the purposes of this Act and the appeal courts of the provinces are given appellate jurisdiction.

### Provincial Judiciaries

Express provisions of the British North America Act govern, to some extent, the provincial judiciaries. Under Sect. 92 (14) the legislature of each province may exclusively make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the Superior, District and County Courts in each province, except those of the Courts of Probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the Superior, District and County Courts (except the Courts of Probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada, and these are set out in the Judges Act, 1946 (10 Geo. VI, c. 56). Under Sect. 99 the judges of the Superior Courts hold office during good behaviour, but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of District and County Court judges is fixed by Sect. 33 of the Judges Act, 1946, as being during good behaviour and their residence within the county or union of counties for which the Court is established.

**Newfoundland.**—*Supreme Court [Consolidated Statutes (Third Series) c. 83].*—The Supreme Court of Newfoundland consists of a chief justice and two other judges, appointed by the Governor General in Council. The Court has original and appellate jurisdiction.

*Central District Court [Consolidated Statutes (Third Series) c. 85].*—The Central District Court for the Central District is situated at St. John's. It is presided over by a judge and has jurisdiction in civil cases up to \$200, but has no jurisdiction in cases involving title to lands. Jurisdiction is also excluded in certain personal actions such as libel and slander.

*Stipendiary Magistrates and Justices of the Peace [Consolidated Statutes (Third Series) c. 86].*—Stipendiary magistrates and justices of the peace are appointed for the Province and have limited criminal and civil jurisdiction.

**Prince Edward Island.**—*Supreme Court (S.P.E.I. 1940, c. 35).*—The Supreme Court of Prince Edward Island consists of a chief justice, who is known as the Chief Justice of Prince Edward Island, and two other judges, all appointed by the Governor General in Council. The Court has original and appellate jurisdiction.

*Court of Chancery (S.P.E.I. 1940, c. 11).*—The Court of Chancery consists of a Chancellor, a Vice-Chancellor and the Master of the Rolls. The Chancellor is the Lieutenant-Governor, the Vice-Chancellor is one of the judges of the Supreme Court and the Master of the Rolls is one of the other judges of the Supreme Court. The Court has original jurisdiction in chancery matters.

*County Courts (S.P.E.I. 1937, c. 6).*—There are three counties in the Province with a County Court and judge for each county. Each Court has criminal jurisdiction and also civil jurisdiction generally in actions up to \$500, but has no jurisdiction in cases involving title to or possession of land.

*Probate Court (S.P.E.I. 1938, c. 41).*—There is one judge, appointed by the Lieutenant-Governor in Council. The Court has jurisdiction in probate and guardianship matters.

*Magistrates and Justices of the Peace (S.P.E.I. 1939, c. 32).*—Magistrates and justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited criminal and civil jurisdiction.

**Nova Scotia.**—*Supreme Court (S.N.S. 1919, c. 32).*—The Supreme Court of Nova Scotia consists of a chief justice and six other judges appointed by the Governor General in Council. The Court has original and appellate jurisdiction in civil and in criminal cases. Sitting individually the judges act as Trial Division and sitting *en banc* the judges act as Appeal Judges.

*Court of Divorce and Matrimonial Causes (R.S.N.S., Third Series, c. 126).*—This Court was established by a pre-Confederation statute and has divorce jurisdiction only. The judge is one of the judges of the Supreme Court.

*County Courts (S.N.S. 1945, c. 5).*—There are seven County Court districts in Nova Scotia and a County Court and judge for each district. The judges are appointed by the Governor General in Council. Each Court has criminal jurisdiction and jurisdiction in civil cases up to \$1,000, but no jurisdiction where any devise or bequest is disputed.

*Probate Court (R.S.N.S. 1923, c. 217).*—By the Probate Act the County Court judges are ex officio judges in probate. Probate matters are decided in the first instance by a registrar of probate and appeals may be taken to the probate judges. A registrar of probate is appointed for each county.

*Magistrates.*—There are 64 stipendiary magistrates and six provincial magistrates, all appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and civil jurisdiction up to \$100.

*Minor Courts of Civil Jurisdiction.*—These consist of Courts established pursuant to city charters, Municipal Courts and Justices Courts. The City and Municipal Courts have jurisdiction up to \$100 and Justices Courts have jurisdiction up to \$20 singly or up to \$80 when two justices are sitting.

*Juvenile Courts (R.S.N.S. 1923, c. 166).*—The Children's Protection Act provides for the establishment of Juvenile Courts and the appointment of Juvenile Court judges. The Courts exercise jurisdiction in juvenile matters under provincial statutes and are also Juvenile Courts under the Dominion Juvenile Delinquents Act. There are six Juvenile Court judges.

**New Brunswick.**—*Supreme Court (R.S.N.B. 1927, c. 113).*—The Supreme Court of New Brunswick consists of three divisions, namely, an Appeal Division, a Chancery Division and a King's Bench Division. The Appeal Division consists of a chief justice, who is known as the Chief Justice of New Brunswick, and two other judges. The Chancery Division consists of three judges who are the judges of the Appeal Division. The King's Bench Division consists of a chief justice and three other judges. The Appeal Division has general appellate jurisdiction throughout the Province and the King's Bench Division has unlimited original jurisdiction throughout the Province in civil and criminal matters except in chancery. All judges are appointed by the Governor General in Council.

*Court of Divorce and Matrimonial Causes (R.S.N.B. 1927, c. 115).*—This Court was established by a pre-Confederation statute which has continued in force to date. It has divorce jurisdiction only. There is one judge who is appointed by the Governor General in Council.

*County Courts (R.S.N.B. 1927, c. 116).*—The Province is divided into counties with a County Court for a county or group of counties. There are six County Court judges, appointed by the Governor General in Council. The Court has criminal jurisdiction, jurisdiction in contracts up to \$400 and jurisdiction in damage actions up to \$200. The Court has no jurisdiction where title to land is brought in question or the validity of any devise or bequest is disputed.

*Probate Court (R.S.N.B. 1927, c. 120).*—A Probate Court is established by provincial Act for each county and each Court is presided over by a judge appointed by the Lieutenant-Governor in Council. The Court has jurisdiction over estates.

*Juvenile Court (S.N.B. 1944, c. 44).*—The Juvenile Courts Act provides for the establishment of a Juvenile Court for each place where the Dominion Juvenile Delinquents Act is in force. Two judges have been appointed, one for Saint John and one for Moncton. The Court has jurisdiction in juvenile matters under provincial statutes and is also a Juvenile Court under the Dominion Juvenile Delinquents Act.

*Magistrates.*—There are four classes of magistrates, namely, those appointed under the Local Courts Act (R.S.N.B. 1927, c. 121), the Towns Incorporation Act (R.S.N.B. 1927, c. 179), under city charters and under the Magistrates Act (S.N.B. 1942, c. 58). Magistrates have limited civil and criminal jurisdiction.

*Justices and Commissioners Courts.*—These Courts of limited jurisdiction are gradually being replaced by Magistrates Courts.

*Quebec (R.S.Q. 1941, c. 15).*—*Court of King's Bench.*—The Court consists of a chief justice, who is called the Chief Justice of the Province of Quebec, and 11 other judges, all of whom are appointed by the Governor General in Council. The Court has appellate jurisdiction in civil and criminal matters and has original jurisdiction in criminal cases.

*Superior Court.*—The Superior Court consists of a chief justice, an associate chief justice and 35 other judges, all of whom are appointed by the Governor General in Council. The Court has general original jurisdiction in civil cases throughout the Province.

*Magistrates.*—Magistrates are appointed by the Lieutenant-Governor in Council. They exercise criminal jurisdiction and also civil jurisdiction in cases up to \$200.

*Family Courts.*—The Lieutenant-Governor in Council is authorized to establish Family Courts but a Court may be established only for a territory that includes a city with a population of over 25,000. The judges are appointed by the Lieutenant-Governor in Council. Every Family Court is a Juvenile Court under the Dominion Juvenile Delinquents Act.

*Sessions of the Peace.*—The Courts are established and the judges appointed by provincial authority. Two judges are to reside at Montreal and at least one judge at the city of Quebec. The Courts have criminal jurisdiction only.

*Justices of the Peace, Recorder's Courts and Commissioners' Courts.*—These Courts are established by provincial authority. They have limited civil and criminal jurisdiction. The Recorder's Courts and Commissioners' Courts deal largely with municipal matters.

**Ontario.**—*Supreme Court (R.S.O. 1937, c. 100).*—The Supreme Court of Ontario consists of two divisions, one of which is known as the Court of Appeal for Ontario and the other as the High Court of Justice for Ontario. The Court of Appeal consists of a chief justice, who is called the Chief Justice of Ontario, and seven other judges. The High Court of Justice consists of a chief justice, who is known as the Chief Justice of the High Court, and 14 other judges. All judges are appointed by the Governor General in Council. The Court of Appeal has general appellate jurisdiction throughout the Province and the High Court of Justice has unlimited original jurisdiction in civil and criminal matters.

*County and District Courts (R.S.O. 1937, c. 103).*—The Province is divided into 48 counties and districts with a County or District Court for each county or district and one or more judges for each Court. There are 62 judges in all, and they are appointed by the Governor General in Council. The Court has criminal jurisdiction, jurisdiction in contracts where the amount claimed does not exceed \$800 and jurisdiction in personal and property actions where the amount claimed does not exceed \$500.

*Surrogate Courts (R.S.O. 1937, c. 106).*—There is a Surrogate Court for each county or district. The Court has jurisdiction to deal with probate and administration matters and is presided over by the County or District Court judge for the district.

*Division Courts (R.S.O. 1937, c. 107).*—There are 285 Division Courts throughout the Province. These are presided over by the County or District Court judge who sits in the jurisdiction where the particular Division Court is located. Jurisdiction is limited to cases up to \$200 except where there is a written contract or a promise in which case jurisdiction extends to \$400.

*Juvenile Courts (R.S.O. 1937, c. 316).*—The Juvenile Court for Ontario has jurisdiction in juvenile cases under provincial legislation; in addition it is a Juvenile Court for the purposes of the Dominion Juvenile Delinquents Act. The judges are appointed by the Lieutenant-Governor in Council; sometimes the county or district judge is appointed, sometimes the local magistrate and sometimes a person is appointed specially for the purpose of acting as a Juvenile Court judge.

*Magistrates (R.S.O. 1937, c. 133).*—Magistrates are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction and are ex officio justices of the peace.

*Justices of the Peace (R.S.O. 1937, c. 132).*—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction.

**Manitoba.**—*Court of Appeal (R.S.M. 1940, c. 40).*—The Court of Appeal consists of a chief justice, who is called the Chief Justice of Manitoba, and four other judges. All judges are appointed by the Governor General in Council. The Court has general appellate jurisdiction throughout the Province.

*Court of King's Bench (R.S.M. 1940, c. 44).*—The Court consists of a chief justice, who is known as the Chief Justice of the King's Bench, and four other judges. All judges are appointed by the Governor General in Council. The Court has unlimited original jurisdiction throughout the Province in civil and criminal cases.

*County Courts (R.S.M. 1940, c. 42).*—The Province is divided into six judicial districts and a number of County Courts are established for each district. A judge is appointed by the Governor General in Council for each district and he is the judge of all the County Courts within the district. There are five judges for the Eastern Judicial District and the other districts each have one judge. The Court has criminal jurisdiction and also jurisdiction generally in claims not exceeding \$800 but has no jurisdiction in certain types of actions such as recovery of land.

*Surrogate Court (R.S.M. 1940, c. 45).*—There is a Surrogate Court for each judicial district and the Surrogate Courts Act provides that the County Court judge in each judicial district is to be the judge of the Surrogate Court of that district. The Court has jurisdiction and authority in relation to testamentary matters.

*Juvenile Courts (R.S.M. 1940, c. 32).*—The Juvenile Courts are established under the Child Welfare Act and the territorial jurisdiction of each Court is set out in the Order in Council establishing the Court and appointing the judges. There are two judges for Winnipeg, one for Brandon, and one for Dauphin. In addition, there are 22 deputy judges. The Courts have power to deal with cases involving children under the Child Welfare Act and other provincial statutes and are also Juvenile Courts for the purposes of the Dominion Juvenile Delinquents Act.

*Police Magistrates (R.S.M. 1940, c. 125).*—Police magistrates are appointed by the Lieutenant-Governor in Council and in addition to criminal jurisdiction they have jurisdiction to try actions for debt where the amount does not exceed \$100. An appeal lies to the judge of a County Court. There are 40 police magistrates in the Province.

*Justices of the Peace (R.S.M. 1940, c. 125).*—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited criminal jurisdiction and also small debt jurisdiction up to \$100.

**Saskatchewan.**—*Court of Appeal (R.S.S. 1940, c. 60).*—The Court of Appeal consists of a chief justice, who is called the Chief Justice of Saskatchewan, and four other judges. All judges are appointed by the Governor General in Council. The Court has general appellate jurisdiction throughout the Province.

*Court of King's Bench (R.S.S. 1940, c. 61).*—The Court of King's Bench consists of a chief justice, who is called the Chief Justice of the King's Bench, and six other judges. All judges are appointed by the Governor General in Council. The Court has unlimited original jurisdiction throughout the Province in civil and criminal matters.

*District Courts (R.S.S. 1940, c. 62).*—The Province is divided into 21 judicial districts and there is a District Court for each judicial district. The judges are appointed by the Governor General in Council. Each Court has jurisdiction generally in all cases where the claim does not exceed \$1,200, but jurisdiction does not include cases where title to land is brought in question or where the validity of any devise or bequest is disputed. Jurisdiction is also excluded in certain personal actions such as malicious prosecution, malicious arrest, false imprisonment, libel, slander and breach of promise of marriage. The Court also has criminal jurisdiction.

*Surrogate Courts (R.S.S. 1940, c. 63).*—There is a Surrogate Court for each judicial district and the Surrogate Courts Act provides that the judge of the District Court shall be the judge of the Surrogate Court. The Court has jurisdiction in probate matters.

*Juvenile Court (S.S. 1946, c. 91).*—Under the Child Welfare Act a Juvenile Court is established. Each judge of a District Court and each police magistrate in the Province is ex officio a judge of the Juvenile Court and, in addition, the Lieutenant-Governor in Council may appoint other judges of the Juvenile Court. The Court has jurisdiction over juvenile offences under provincial statutes and also has jurisdiction, under the Dominion Juvenile Delinquents Act.

*Magistrates' Courts (R.S.S. 1940, c. 94).*—Magistrates are appointed by the Lieutenant-Governor in Council. There are eight full-time and eight part-time magistrates. All the magistrates exercise criminal jurisdiction. They are ex officio justices of the peace and accordingly have the jurisdiction of a justice of the peace in civil cases.

*Justices of the Peace (R.S.S. 1940, c. 95).*—Justices of the peace are appointed by the Lieutenant-Governor in Council and, in addition to limited criminal jurisdiction, have jurisdiction in civil cases up to \$100.

**Alberta.**—*Supreme Court (R.S.A. 1942, c. 129).*—The Supreme Court of Alberta consists of two branches or divisions; one is designated the Appellate Division of the Supreme Court of Alberta and the other is designated the Trial Division of the Supreme Court of Alberta. The Appellate Division consists of a chief justice, who is called the Chief Justice of Alberta, and four other judges. The Trial Division consists of a chief justice, who is called the Chief Justice of the Trial Division, and five other judges. All judges of the Supreme Court are appointed by the Governor General in Council. The Appellate Division exercises general appellate jurisdiction throughout the Province and the Trial Division has unlimited original jurisdiction in civil and criminal matters.

*District Courts (R.S.A. 1942, c. 121).*—There are two District Court districts in Alberta, namely, the District of Northern Alberta and the District of Southern Alberta, with a District Court for each. The Court of the District of Northern Alberta consists of a chief judge and five other judges and the Court of the District of Southern Alberta consists of a chief judge and four other judges. All judges are appointed by the Governor General in Council. The District Courts generally have jurisdiction in all cases where the claim does not exceed \$600 and, in addition, have jurisdiction in criminal, probate and guardianship matters.

*Juvenile Courts (S.A. 1944, c. 8).*—The Child Welfare Act establishes a Juvenile Court for the Province and every judge of the Supreme Court, every judge of a District Court and every police magistrate is ex officio a judge of the Juvenile Court. In addition the Lieutenant-Governor in Council may appoint other persons to be judges of the Juvenile Court; 11 such judges have been appointed. The Court has jurisdiction to hear and determine offences charged against children under any statute of the Province and, in addition, the Court is a Juvenile Court for the purposes of the Dominion Juvenile Delinquents Act.

<i>Chief</i> —band in top of shield	<i>Guardant</i> —looking full face at the spectator	<i>Sable</i> —black
<i>Crined</i> —maned	<i>Gules</i> —red	<i>Stalant</i> —standing
	<i>Langued</i> —tongued	<i>Tierced</i> —divided into three parts
		<i>Vert</i> —green

## Canada

The Armorial Bearings of the Dominion were authorized Nov. 21, 1921.

DESCRIPTION OF ARMS.—Three considerations were kept in view in determining the combination of arms, crest, supporters, and motto: firstly, that Canadians stand to the King in the relation of British subjects; secondly, that Canada, though an integral part of the British Empire, is a member of the League of Nations; and lastly, that Canada was founded by the men of four different races—French, English, Scottish and Irish—and inherits the culture of all four. The arms are those of England, Scotland, Ireland and France, with a "difference" to mark them as Canadian, namely, on the lower third of the shield, a sprig of maple on a silver shield. The CREST is a lion holding in its paw a red maple leaf, a symbol of sacrifice. The SUPPORTERS are, with some slight distinctions, the lion and unicorn of the Royal Arms, the lion upholds the Union Jack, and the unicorn the ancient banner of France.

MOTTO.—A MARI USQUE AD MARE—"From sea to sea"—is an extract from the Latin version of verse 8 of the 72nd Psalm: "He shall have dominion also from sea to sea, and from the river unto the ends of the earth."

FLORAL EMBLEM.—Maple Leaf.

## Ontario

Granted by Royal Warrant dated May 26, 1868. Crest and Supporters granted by Royal Warrant dated Feb. 27, 1909.

DESCRIPTION OF ARMS.—"Vert a Sprig of three leaves of Maple slipped Or, on a Chief Argent the Cross of St. George." CREST—"Upon a Wreath of the Colours a Bear passant Sable, and the SUPPORTERS on the dexter side A Moose, and on the sinister side A Canadian Deer, Both Proper."

MOTTO.—"Ut Incepit Fidelis Sic Permanet" (Loyal in the beginning, so it remained).

FLORAL EMBLEM.—White Trillium (c. 26, 1937).

## Quebec

Adopted by Provincial Order in Council of Dec. 9, 1939.

DESCRIPTION OF ARMS.—Tierced in fesse: Azure three Fleur-de-lis Or; Gules a Lion passant guardant Or armed and langued Azure; Or a Sugar Maple Sprig with three Leaves veined vert. Surmounted with the Royal Crown. Below the Shield a Scroll Argent surrounded by a Bordure Azure inscribed with the Motto Azure.

MOTTO.—"Je me souviens" (I remember).

FLORAL EMBLEM.—Maple Leaf (unofficial).

## Nova Scotia

Granted by Royal Warrant dated Jan. 19, 1929, to supersede Armorial Ensigns granted May 26, 1868.

DESCRIPTION OF ARMS.—"Argent a Cross of St. Andrew Azure charged with an escutcheon of the Royal Arms of Scotland", with the CREST, on a Wreath of the Colours, "A branch of laurel and a thistle issuing from two hands conjoined the one being armed and the other naked all proper", and for SUPPORTERS, on the dexter "An Unicorn Argent armed crined and unguled Or, and crowned with the Imperial Crown proper, and gorged with a Coronet composed of crosse patée and fleur-de-lis, a chain affixed thereto passing through the forelegs and reflexed over the back, Gold"—and on the sinister, "A Savage holding in the exterior hand an arrow".

MOTTO.—"Munit hæc et altera vincit" (One defends and the other conquers).

FLORAL EMBLEM.—Trailing Arbutus (or Mayflower) (c. 10, 1901).

## New Brunswick

Granted by Royal Warrant dated May 26, 1868.

DESCRIPTION OF ARMS.—"Or on Waves of Lymphad, or Ancient Galley, with Oars in Action proper on a Chief Gules a Lion passant guardant Or."

FLORAL EMBLEM.—Purple Violet (Provincial Order in Council of Dec. 1, 1936).

## Manitoba

Granted by Royal Warrant dated May 10, 1905.

DESCRIPTION OF ARMS.—"Vert on a Rock a Buffalo statant proper, on a Chief Argent the Cross of St. George."

FLORAL EMBLEM.—Crocus (*anemone patens*) (c. 29, 1906).

## British Columbia

Granted by Royal Warrant dated Mar. 31, 1906.

DESCRIPTION OF ARMS.—"Argent three Bars wavy Azure issuant from the base of a demi-Sun in splendour proper, on a Chief of the Union Device charged in the centre Point with an Antique Crown Or." The CREST and SUPPORTERS (dexter an Elk and sinister a Mountain Sheep, both proper) have become part of the Provincial Achievement through usage.

MOTTO.—"Splendor sine occasu" (Splendour without diminishment).

## Prince Edward Island

Granted by Royal Warrant dated May 30, 1905.

DESCRIPTION OF ARMS.—"Argent on an Island Vert, to the Sinister an Oak Tree fructed, to the Dexter thereof three oak Saplings Sprouting all Proper, on a Chief Gules a Lion passant guardant Or."

MOTTO.—"Parva sub ingenti" (The small under [the protection of] the great).

## Saskatchewan

Granted by Royal Warrant dated Aug. 25, 1906.

DESCRIPTION OF ARMS.—"Vert three Garbs in fesse Or, on a Chief of the lost a Lion passant guardant Gules."

FLORAL EMBLEM.—Prairie Lily (c. 8, 1941).

## Alberta

Granted by Royal Warrant dated May 30, 1907.

DESCRIPTION OF ARMS.—"Azure in front of a Range of Snow Mountains proper, a Range of Hills Vert, in base a Wheat-field surmounted by a Prairie both also proper, on a Chief Argent a St. George's Cross."

FLORAL EMBLEM.—Wild Rose (c. 38, 1930).

## Newfoundland

Granted by Royal Letters Patent dated Jan. 1, 1637.

DESCRIPTION OF ARMS.—"Gules a cross Argent, in the first and fourth quarters a Lion passant Guardant crowned Or; in the second and third quarters an Unicorn passant Argent, armed, maned and unguled of the third, and gorged with a crown, thereto a chain affixed passing between the forelegs and reflected over his back also Or Mantled Gules doubled Argent." CREST—"On a Wreath Or and Gules an Elk passant proper." SUPPORTERS—"Two Savages of the clime armed and apparelled according to their guise when they go to war."

MOTTO.—"Quærite prime regnum Dei" (Seek ye first the Kingdom of God).

FLORAL EMBLEM.—Pitcher Plant (selected by Queen Victoria and commonly accepted throughout the Island).

*Police Magistrates (R.S.A. 1942, c. 134).*—Police magistrates have criminal jurisdiction and also jurisdiction in actions for debt not exceeding \$100 and wage claims not exceeding six months' wages. Ninety-six police magistrates have been appointed.

*Justices of the Peace (R.S.A. 1942, c. 134).*—Justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction.

**British Columbia.**—*Court of Appeal (R.S.B.C. 1936, c. 57).*—The Court of Appeal consists of a chief justice, who is called the Chief Justice of British Columbia, and four other judges who are called Justices of Appeal. All are appointed by the Governor General in Council. The Court exercises general appellate jurisdiction.

*Supreme Court (R.S.B.C. 1936, c. 56).*—This Court consists of a chief justice, who is called the Chief Justice of the Supreme Court, and five other judges who are called Judges of the Supreme Court. All are appointed by the Governor General in Council. The Court has unlimited original jurisdiction throughout the Province in civil and criminal matters.

*County Courts (R.S.B.C. 1936, c. 58).*—There are eight counties in the Province with a County Court for each county and one or more judges for each County Court. All judges are appointed by the Governor General in Council. Each County Court has jurisdiction up to \$1,000 generally and in some cases up to \$2,500 and has jurisdiction in criminal and probate matters. The Courts have no jurisdiction in certain types of personal actions such as libel, slander or breach of promise of marriage.

*Small Debts Court (R.S.B.C. 1936, c. 62).*—The Small Debts Court Act provides that the Lieutenant-Governor in Council may appoint any stipendiary magistrate, police magistrate or any two justices of the peace to exercise small debt jurisdiction within the territorial limits for which he or they have been appointed. There are 97 Small Debts Court magistrates. Jurisdiction is limited to \$100 and an appeal lies to the nearest County Court judge or Supreme Court judge.

*Magistrates and Justices of the Peace (R.S.B.C. 1936, c. 163).*—Magistrates and justices of the peace are appointed by the Lieutenant-Governor in Council. They have limited civil and criminal jurisdiction.

## Section 2.—Provincial Governments

In each of the provinces, the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and acts on the advice and with the assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislature of each province, with the exception of Quebec, is now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly.

# 11.—Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation, and Legislative Process by which Admission was Effected

<b>Canada .....</b>			<b>3,499,116</b>	<b>234,028</b>	<b>3,845,144</b>

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the Award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,000 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

<sup>3</sup> Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

<sup>4</sup> Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.

<sup>5</sup> By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation.

The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the District of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21).

The provisional Districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897.

By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905.

By the Extension of Boundaries Act, 1912, Ungava was made a part of the Province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

<sup>6</sup> Island of Newfoundland only.

<sup>7</sup> Includes Coast of Labrador.

The source of the powers of the Provincial Governments of Canada is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province may make laws exclusively in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the

incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province, including the constitution, maintenance and organization of provincial courts both of civil and criminal jurisdiction, and including procedure in civil matters in these courts\*; the imposition of punishment by fine, penalty, or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature may, under Sect. 93, make laws exclusively in relation to education, subject to certain provisions. The purpose of these provisions was to preserve to a religious minority in any province the same privileges and rights in regard to education which it had at the date of Confederation, but the provincial Legislatures were not debarred from legislating on the subject of separate schools provided they did not thereby prejudicially affect privileges enjoyed before Confederation by such schools in the province. These powers, given to the four original provinces in Confederation, have, with some slight changes, been retained ever since and the more recently admitted provinces have assumed the same rights and responsibilities on their inclusion as units in the federation as were previously enjoyed by the older provinces.

### Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Executive Council consists of: the Premier and Minister of Economic Development and the Ministers of Justice, Finance, Health, Public Welfare, Fisheries and Co-operatives, Natural Resources, Education, Provincial Affairs, Labour, Public Works and Supply.

The Legislative Assembly has 28 members, each member receiving a salary of \$1,500 and allowance of \$1,000. The salary of the Premier is \$7,000 and that of the Leader of the Opposition \$2,000 in addition to their salaries as members. The Speaker also receives an additional salary of \$2,000.

The Lieutenant-Governor, Hon. Sir Albert Joseph Walsh, K.C., LL.B., was commissioned Apr. 1, 1949. He was succeeded on Aug. 17, by the Hon. Sir Leonard Cecil Outerbridge, C.B.E., D.S.O. An election for members of the General Assembly was held on May 27, 1949. The standing of the parties was: Liberals 22, Progressive Conservatives 5, Independent 1. The Leader of the Liberal Party, the Hon. Joseph R. Smallwood, became the first Premier of the Province, the date of his appointment being Apr. 1, 1949. The members of the first Ministry were as follows:

\* A description of the provincial courts is given at pp. 109-115.

### 12.—Newfoundland Ministry as at Aug. 1, 1949

Office	Name	Date of Appointment
Premier and Minister of Economic Development.....	Hon. JOSEPH R. SMALLWOOD.....	Apr. 1, 1949
Minister of Justice.....	Hon. L. R. CURTIS, K.C.....	Apr. 1, 1949
Minister of Finance.....	Hon. H. W. QUINTON, C.M.G.....	July 29, 1949
Minister of Public Welfare.....	Hon. Dr. H. L. POTTLE, M.A.....	Apr. 4, 1949
Minister of Fisheries and Co-operatives.....	Hon. W. J. KEOUGH.....	July 29, 1949
Minister of Supply.....	Hon. P. S. FORSEY.....	July 29, 1949
Minister of Education.....	Hon. S. J. HEFFERTON.....	Apr. 4, 1949
Minister of Labour.....	Hon. C. H. BALLAM.....	Apr. 4, 1949
Minister of Natural Resources.....	Hon. E. RUSSELL.....	July 29, 1949
Minister of Health.....	Hon. J. R. CHALKER.....	July 29, 1949
Minister of Provincial Affairs.....	Hon. J. J. SPRATT.....	July 29, 1949
Minister of Public Works.....	Hon. E. S. SPENCER.....	June 22, 1949

### Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Executive Council of Prince Edward Island consists of: the President of the Council, Premier, Minister of Education, Provincial Secretary-Treasurer and Acting Minister of Industry and Natural Resources; the Attorney and Advocate General; the Minister of Health and Welfare; the Minister of Agriculture; the Acting Minister of Public Works and Highways; and four Ministers without portfolio. The Legislative Assembly has 30 members who serve for five years, 15 of whom are elected on a basis of manhood suffrage and the other 15 elected by property holders only.

The salary of the Premier is \$4,500 and that of the Ministers \$3,000. Each member of the Assembly is paid the sum of \$700 for each session attended by him and an additional amount of \$300, tax free, as indemnity for expenses incurred. The Speaker and the Leader of the Opposition are paid a further additional sum of \$400 and an additional amount of \$200, tax free, for indemnity incurred.

### 13.—Lieutenant-Governors of Prince Edward Island, 1873-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949

NOTE. — The Lieutenant-Governor of a province is addressed "His Honour" and is also styled "Honourable" throughout his life. Where a knighthood or other honour was conferred during the term of office, it is shown. Certain Lieutenant-Governors were knighted after their term had expired. Legislatures and Ministries from Confederation to 1923 are given at pp. 75-84 of the 1924 Year Book, and for 1924-34 at pp. 110-118 of the 1938 Year Book.

Minister without portfolio.....	Hon. EUGENE CULLEN.....	Apr. 16, 1949

### Subsection 3.—Nova Scotia

The Province of Nova Scotia has a Lieutenant-Governor, Executive Council and a House of Assembly. The Ministry or Cabinet, styled the Executive Council, consists of the Premier and Provincial Treasurer; the Attorney General who is also Minister of Labour, Acting Minister of Public Health, Acting Minister of Public Welfare, and Acting Registrar General; the Minister of Mines who is also Provincial Secretary and Minister of Municipal Affairs; the Minister of Highways and Public Works; the Minister of Agriculture and Marketing who is also Minister of Lands and Forests; the Minister of Trade and Industry, and two Ministers without portfolio one of whom is in charge of the administration of the Nova Scotia Liquor Control Act. The House of Assembly formerly had 30 members but this number was increased by legislation in 1948 to 37 effective at the next General Election. The members of the Assembly are elected for five years, the maximum duration of its existence.

The Premier of the Province receives a salary of \$9,000 per annum and Cabinet Ministers a salary of \$8,000 per annum. Each member of the House of Assembly receives a sessional indemnity of \$1,600 and an allowance of \$800 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$1,000 in addition to his sessional indemnity.

### 14.—Lieutenant-Governors of Nova Scotia, 1867-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949

NOTE.—See headnote to Table 13, p. 118.

Minister without portfolio.....	Vacant.	
Minister without portfolio (in charge of administration of Nova Scotia Liquor Control Act).....	Hon. GEOFFREY STEVENS.....	Apr. 4, 1946

##### Subsection 4.—New Brunswick

The Province of New Brunswick in all essential features of provincial administration is similar to its neighbour, Nova Scotia. The Executive Council is composed of: the Premier and Attorney General, the Provincial Secretary-Treasurer and President of the Executive Council, the Minister of Public Works, the Minister of Lands and Mines, the Minister of Agriculture, the Minister of Health and Social Services, the Minister of Labour, the Minister of Education and of Federal and Municipal Relations, the Minister of Industry and Reconstruction and a Minister without portfolio who is the Chairman of the New Brunswick Electric Power Commission. The Legislative Assembly at present has 52 members who are elected for a term of five years.

The Premier receives a salary of \$5,000 which is in addition to any other portfolio which he may hold. The salary of Cabinet Ministers is \$5,000, the amount paid as indemnity to Members is \$1,500 and the Leader of the Opposition receives \$2,000 in addition. An allowance of \$1,000, in addition to the regular indemnity, is made to the Speaker.

# 15.—Lieutenant-Governors of New Brunswick, 1867-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949

NOTE.—See headnote to Table 13, p. 118.

Minister of Industry and Reconstruction	Hon. J. A. DOUCET	Sept. 27, 1944
Minister without portfolio	Hon. J. GASFARD BOUCHER	Mar. 13, 1940

## Subsection 5.—Quebec

The Executive Council is composed of the Lieutenant-Governor and his advisers, the Ministers of the Crown. These are: the Premier, Attorney General and President of the Executive Council; the Provincial Treasurer; the Minister of Lands and Forests; the Minister of Health; the Minister of Municipal Affairs; the Minister of Colonization; the Minister of Mines; the Minister of Agriculture;

the Minister of Roads; the Minister of Labour; the Minister of Game and Fisheries; the Minister of Public Works; the Minister of Social Welfare and of Youth; the Minister of Trade and Commerce; the Provincial Secretary; and six Ministers without portfolio. The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council.

The Legislative Assembly has 92 members and, like the Legislative Council, has the power to bring forward bills relating to civil and administrative matters and to amend or repeal the laws that already exist. A bill, to be approved by the Lieutenant-Governor, must have received the assent of both Houses. Only the Legislative Assembly can bring forward a bill requiring the expenditure of public money. The extreme length of a Legislature is five years.

Salaries and allowances of the Premier, members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to the Revised Statutes (1941), c. 4, as amended by 10 Geo. VI, c. 11, as follows: all members of the Legislative Assembly and Legislative Council receive \$3,000 per annum as salary and \$1,000 by way of allowances; in addition the Premier receives \$10,000 as salary and \$4,000 allowances; ministers with portfolio an additional \$6,000 as salary and \$2,000 allowances; ministers without portfolio an additional \$2,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Assembly an additional \$6,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Council an additional \$2,000 allowances.

**Subsection 6.—Ontario**

The Executive Council of Ontario consists of: the Premier, President of the Council and Provincial Treasurer; Minister of Agriculture; Minister of Mines; Attorney General and Minister of Education; Minister of Highways and Minister of Public Works; Minister of Municipal Affairs; Minister of Reform Institutions; Minister of Labour; Provincial Secretary and Registrar; Minister of Health; Minister of Planning and Development; Minister of Public Welfare; Minister of Lands and Forests; Minister of Travel and Publicity; and one Minister without portfolio.

The House of Assembly, the single-chamber Legislature of the Province, is composed of 90 members elected for five years on an adult suffrage basis.

Besides the regular departments the Niagara Parks Commission, the Ontario Municipal Board, the Hydro-Electric Power Commission of Ontario and the Ontario Northland Transportation Commission have been created.

Under the provisions of the Legislative Assembly Amendment Act, 1947 (11 Geo. VI, c. 55), each Member of the Assembly is paid an annual indemnity of \$2,000 and an allowance for expenses of \$1,000. The Speaker receives an additional indemnity at the annual rate of \$2,500; the Chairman of the Committee of the Whole an indemnity at the annual rate of \$1,000 and the Leader of the Opposition an additional indemnity of \$3,000 and an annual allowance for expenses of \$2,000. These special indemnities and allowances for the Speaker, Chairman of the Committee of the Whole and Leader of the Opposition are in addition to their indemnities and expense allowances as Members of the Legislature.

Members of the Cabinet receive the ordinary indemnity as Members of the Legislature of \$2,000 plus the \$1,000 expense allowance in addition to their salaries as Members of the Crown. The salary provided for Cabinet Ministers in the

Executive Council Act is \$10,000 but at the present time and for some years past the Members of the various Cabinets have voluntarily surrendered \$2,000 annually, drawing \$8,000 each as their Ministerial salary.

### Subsection 7.—Manitoba

Besides its Lieutenant-Governor, Manitoba has a Provincial Executive composed of 12 men and a Legislative Assembly of 58 elected for five years.\* The Provincial Executive, headed by the Premier and President of the Council, who is also Minister of Dominion-Provincial Relations, consists of: the Minister of Agriculture and Immigration; the Provincial Treasurer; the Minister of Labour; the Municipal Commissioner; the Minister of Mines and Natural Resources who is also the Minister presiding over the Department of Industry and Commerce; the Attorney General; the Provincial Secretary; the Minister of Public Utilities, who is the Minister under the Manitoba Power Commission Act, the Manitoba Telephone Act and the Municipal and Public Utility Board Act; the Minister of Health and Public Welfare; the Minister of Education; the Minister of Public Works.

The Premier of the Province is paid a salary of \$7,050 per annum and the other members of the Cabinet a salary of \$5,287.80 each. The Members of the Legislature of this Province are each paid an indemnity and an allowance of \$2,000, being made up of \$1,350 indemnity and \$650 as an expense allowance. The Leader of the Opposition group in the Legislature is paid an additional amount of \$1,500. The Speaker of the Legislature is paid a salary of \$2,000 in addition to the indemnity and expense allowance.

\* An Act to amend the Legislative Assembly Act has been passed by the Manitoba Legislature to change the membership from 55 members plus the three representatives of the Armed Forces to 57 members effective at the next General Election.

### 18.—Lieutenant-Governors of Manitoba, 1870-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949

## Subsection 9.—Alberta

There are ten members of the Executive Council of Alberta: the Premier and Provincial Treasurer; the Minister of Agriculture; the Minister of Economic Affairs; the Minister of Education; the Minister of Public Works who is also responsible for the Department of Railways and Telephones; the Minister of Mines and Minerals, and Lands and Forests; the Minister of Health and Public Welfare; the Minister of Municipal Affairs and Provincial Secretary; the Attorney General; and the Minister of Industries and Labour.

There are 57 members of the Legislative Assembly who are elected for a maximum period of five years.

The salary of the President of the Executive Council is \$9,000 and of a Cabinet Minister \$7,000. Since no party is recognized as the official opposition a special allowance of \$500 is paid to the Leaders of the Liberal and Co-operative Commonwealth Federation parties. The sessional indemnity for all Members of the Legislative Assembly is \$2,000 plus an expense allowance of \$1,000.

**20.—Lieutenant-Governors of Alberta, 1905-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949**

Minister of Industries and Labour.....	Hon. J. L. ROBINSON.....	May 8, 1948

Subsection 10.—British Columbia

British Columbia has a Lieutenant-Governor and an Executive Council composed of: the Premier and President of the Council; Provincial Secretary and Minister of Health and Welfare; Attorney General; and the Ministers of Lands and Forests, Finance, Agriculture, Mines and Municipal Affairs, Public Works, Railways, Trade and Industry and Fisheries, Labour, and Education. The Legislative Assembly, elected for five years, has 48 members.

Members of the Executive Council and the Legislative Assembly receive Sessional Allowances of \$2,000 and \$1,000 for expenses. The Premier receives a salary of \$9,000 and Members of the Executive Council \$7,500 in addition. The Leader of the Opposition has a special allowance of \$2,000 and the Speaker and Deputy Speaker receive allowances of \$1,800 and \$500, respectively.

21.—Lieutenant-Governors of British Columbia, 1871-1949, Legislatures and Premiers, 1934-49, and Present Ministry as at Aug. 1, 1949

NOTE.—See headnote to Table 13, p. 118.

Lieutenant-Governors

Name	Date of Commission	Name	Date of Commission
J. W. TRUTCH.....	July 5, 1871	Sir FRANK S. BARNARD.....	Dec. 5, 1914

Minister of Education.....	Hon. WILLIAM THOMAS STRAITH, K.C., B.A., LL.B.	Dec. 29, 1947

### Subsection 11.—Yukon and the Northwest Territories

**Yukon.**—The Yukon Act provides for a local government composed of a Chief Executive, styled Commissioner, who is appointed by the Governor in Council, and an elective Territorial Council of three members having a three-year tenure of office. The Yukon Territorial Council performs much the same functions as do the Provincial Governments. The Commissioner functions in lieu of the Provincial Cabinet and the three members of the Territorial Council function in lieu of the Provincial Legislature. The seat of local government is at Dawson, but the Commissioner acts under instructions from the Governor in Council or the Minister of Mines and Resources at Ottawa.

#### COMMISSIONER

JOHN EDWARD GIBBEN.....Sept. 13, 1947

#### TERRITORIAL COUNCIL

(Three members elected 1949, for 3 years)

Dawson District..... CHARLES J. LELIEVRE  
Whitehorse District..... R. GORDON LEE  
Mayo District..... ERNEST J. CORP

**Northwest Territories.**—The government of the Northwest Territories is vested in the Commissioner, assisted by a Council composed of six members all of whom are appointed by the Governor in Council. The administration of the various Acts, Ordinances and Regulations pertaining to the Northwest Territories is supervised by the Director of the Lands and Development Services Branch, Department of Mines and Resources, who is also Deputy Commissioner. The seat of government is at Ottawa.

#### TERRITORIAL COUNCIL

Commissioner..... HUGH L. KEENLEYSIDE.  
Deputy Commissioner..... ROY A. GIBSON.  
Members of the Council.... LOUIS C. AUDETTE, HAROLD B. GODWIN, DONALD M.  
MACKAY, JOHN G. MCNIVEN, STUART T. WOOD.  
Secretary..... JAMES G. WRIGHT.

### Section 3.—Municipal Government\*

The earliest local government in Canada was carried out by the seigniors of New France, who along with military command and the administration of justice, bore the responsibilities of appointing justices of the peace and clerks of roads. Some were soon replaced by a 'syndic' elected by the people, the first in 1644, though a mayor and two aldermen had briefly held office in the city of Quebec in 1643. However, the 'syndics' fell into disuse, and powers were delegated by the governor to officials. The city of Quebec was incorporated in 1831, and a system of local government for the Province, decreed in 1840, was remodelled by Acts of 1845, 1847, 1850 and 1860.

Meanwhile, in the maritime region, Saint John had attained the distinction of becoming Canada's first incorporated city in 1784. Incorporation of Halifax came in 1849 and Charlottetown in 1855. In Ontario the Parish and Town Officers Act

\* Prepared in the Municipal Finance Section, Public Finance Division, Dominion Bureau of Statistics,

of 1793 provided for an annual meeting in a parish or township to appoint local officers but these were responsible to Parliament and the courts and the meetings had no law-making powers. Brockville, in 1832, gained some local powers from the Governor in Council which had previously been exercised through the courts. Other localities soon followed suit, and in 1834 York was incorporated as the self-governing city of Toronto. Further steps led to the Municipal Act of 1849, which is the foundation of the local government of today in Ontario and which later provided a model for the western provinces. Subsequently, Acts have been passed in all provinces governing aspects of municipal incorporation, powers and duties.

Municipal government in every province of Canada existed in at least elementary form before Confederation. With such a background, the provision of the British North America Act that jurisdiction over municipal affairs would rest with the provinces has resulted, quite naturally, in dissimilarity in the organization of local government across the country. This stems not only from the difference in beginnings and subsequent independent growth in each province, but also from a variation in requirements arising out of geographical and population differences.

The situation remains in a state of flux, with constant amendment of provincial Acts and charters in the attempt to solve old problems and to meet new ones. Just as the call for new and additional services has enlarged the scope of Federal and provincial activities, the municipalities have had to assume responsibilities unheard of, or considered beyond their sphere of activity, a few decades ago. As a result, amendments to Acts have varied from those enlarging the powers and the boundaries of municipalities, to those establishing closer provincial control and greater financial aid.

A special article on the history of local government in Canada is planned for a later edition of the *Canada Year Book*.

The chief forms of municipal organization at present extant in the provinces of Canada are given in the following paragraphs.\*

**Newfoundland.**—This new Province has only one "city", St. John's. The remainder of the population is mostly dispersed in small settlements around the coastline, and only since the passage of the Local Administration Act of 1937 have a few of the larger of these been set up individually with local councils as "towns", or where two or three are close together, as "rural districts" (14 by 1948). These latter are not rural municipalities, but merely "towns" consisting of two or more settlements. Local affairs in the remainder of the Province are administered by the Provincial Government.

**Prince Edward Island.**—The "city" of Charlottetown and seven "towns", all incorporated by special Acts, comprise the total municipal organization in this Province. They include less than one-half of one per cent of its total area and only a quarter of its population. The remainder is not organized municipally, as the three counties are purely provincial administrative units.

**Nova Scotia.**—Municipal organization in Nova Scotia covers the whole of the Province. Halifax and Sydney are the only two "cities" and operate under special charters, with the latter also governed by some special legislation. "Towns", which number 41, operate under the Town Incorporation Act. There are no municipalities incorporated as villages. Cities and towns are independent of

\* Municipalities are summarized by type of organization on p. 133.

counties. The rural area is divided into 18 counties which in themselves do not represent units of local government. However, 12 of these counties each comprise one municipality, and the other six two each, making a total of 24 rural "municipalities".

**New Brunswick.**—The Province is wholly divided into 15 "counties" which are incorporated municipalities and have direct powers of local self-government in the rural areas. In effect, therefore, they are the rural municipalities. In most cases certain of their powers apply in urban municipalities as well. The three "cities" have special charters, and the 19 towns operate under the Towns Incorporation Act. There are also four "villages".

**Quebec.**—Municipal divisions in Quebec cover the more heavily settled portions, the remaining nine-tenths being governed by the Province as 'territories'. The organized area is divided into 76 "county" municipalities, which are themselves divided into local municipalities under the Municipal Code, designated as "village", and "township" or "parish" municipalities or just as "municipalities". The counties, as such, have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying districts with little or no population. In 1948 there were 317 villages and 1,084 townships and parishes. A small number of these are independent of the counties in which they are located. Of the 30 "cities", a few have special charters. The remainder, along with the 124 "towns", are governed by the Cities and Towns Act and numerous special Acts.

**Ontario.**—Slightly more than one-tenth of the area of Ontario is municipally organized, the remainder being governed entirely by the Provincial Government. The older section of the Province is divided into 43 "counties", five of which are united with others for administrative purposes. Although incorporated municipalities, each county is comprised of the "towns", "villages", and "townships" situated within its borders, which provide its revenues as in Quebec. There are 29 cities, 145 towns, 156 villages, 571 townships and 11 "improvement districts". Some of each are located in the northern districts of the Province, which is not organized into counties.

**Manitoba.**—Only the southern and settled section of the Province, comprising less than one-eighth of the area, is organized for local self-government. As in the three other western provinces, there is no county organization, and all municipalities are independent except of provincial control. There are four "cities", three with special charters and one governed by a number of special acts. General acts govern the 33 "towns", 27 "villages", 110 "rural municipalities" and five "suburban municipalities". An Act of 1944 authorizes organization of "local improvement districts" in unorganized or disorganized territory.

**Saskatchewan.**—All municipalities in Saskatchewan derive their powers from general acts which are designated with the name of the type of municipality. There are 8 "cities", 83 "towns", 398 "villages" and 303 "rural municipalities". The area so organized consists of most of the southern two-fifths of the Province. The remainder of this portion is administered for local purposes by the Province in unincorporated local "improvement districts". The northern three-fifths are sparsely populated and without local government.

**Alberta.**—Here also there are “cities”, “towns”, “villages” and rural municipalities known as “municipal districts”. The latter three classes come under general acts, while each of the seven cities has its own charter. There are 57 towns, 132 villages, and 59 municipal districts, but less than one-fifth of the Province is so organized. There are also some unincorporated “improvement districts” administered by the Province in less densely settled areas.

**British Columbia.**—This Province has less than 0.5 p.c. of its area organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the Provincial Government. There are 34 “cities”, 35 “villages”, and 28 “districts”, the latter being chiefly rural municipalities; except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should, however, be emphasized that the application of the name “city” is somewhat different from the commonly accepted meaning in that several of them have populations of less than one thousand and, perhaps half or more would not normally be incorporated as cities in any other province of Canada.

## 22.—Municipalities in Canada by Types of Organization and by Provinces, 1948<sup>1</sup>

<sup>1</sup> Newfoundland entered Confederation in 1949. See paragraph on municipal organization above.

<sup>2</sup> Includes 11 local improvement districts.

<sup>3</sup> Includes 5 units of self-government officially known as “suburban municipalities”.

<sup>4</sup> Does not include 81 improvement districts.

<sup>5</sup> Does not include 58 improvement districts.

On the basis of the 1941 Census, over 10,689,000 or 93 p.c. of the population of the nine provinces was contained in incorporated municipalities. The following table, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded comprised those on Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt to be necessary or desirable.

**23.—Population of Incorporated Municipalities, by Provinces, 1941**

**Section 4.—Federal-Provincial Relations**

Material on this subject will be found at pp. 79-81 of the 1946 edition of the Year Book, at pp. 85-89 of the 1947 and at pp. 116-122 of the 1948-49 editions.

**PART III.—CANADA'S EXTERNAL RELATIONS****Section 1.—Canada's Growth in External Status**

The evolution of Canada in its external relations is reflected in the growth of its Department of External Affairs. A review of the organization and development of that Department is given at pp. 74-79 of the 1945 edition of the Year Book.

**Section 2.—Canada and the United Nations, 1948\***

An outline of the organization of the United Nations and Canada's place therein appears at pp. 82-86 of the 1946 Year Book. Additional material appeared at pp. 122-125 of the 1948-49 edition. The following material brings the record of Canada and the United Nations up to the end of 1948.

Despite the continued failure of its Permanent Members to agree, the United Nations had substantial success in dealing with many of the international problems which confronted it in 1948. The events of the year demonstrated that, although the organization lacks the means and authority to impose settlements in international disputes, it is at its best when dealing with differences which lend themselves to treatment by truce and mediation procedures. Thus in the Indonesian, India-Pakistan and Palestine disputes, the United Nations has been able to bring an impartial moderating influence to bear and, through this, to localize threatening conflicts. At the same time, numerous other disputes, which responded less readily to solution by compromise, confronted the United Nations in the course of the year. Among these the most intractable were: the attempts to reach agreements in the Atomic Energy Commission, in the Commission for Conventional Armaments, and in the Berlin currency problem.

A brief summary of United Nations action on the most important issues, and in particular of the part played by Canada follows.

\* Prepared by the United Nations Division, Department of External Affairs, Ottawa.

**Canada's Contribution during 1948.**—Although forced by the inadequacies of the security guarantees provided by the United Nations itself to participate in the discussions leading to the North Atlantic Treaty, Canada continued to regard membership in the United Nations as one of the essential principles underlying foreign policy. In the face of grave doubts concerning the value of the Security Council as the executive arm of the United Nations, Canada entered a two-year term of membership on Jan. 1, 1948. General A. G. L. McNaughton, as Canadian Permanent Delegate to the United Nations, acted as Canada's representative on the Council and also on the Atomic Energy Commission and the Commission for Conventional Armaments. Canada was represented on the Economic and Social Council until the end of the year, and did not stand for re-election.

The General Assembly met for two sessions during the year. From Apr. 16 to May 15 it held its second special session at the request of the Security Council to consider the future of Palestine. Canada was a member of the twelve-nation Subcommittee established to formulate provisional arrangements in Palestine which would come into effect after the expiry date of the United Kingdom mandate on May 15.

The first part of the third regular session of the General Assembly was held at Paris from September to December, 1948. The Canadian Delegation was headed at first, by the Rt. Hon. W. L. Mackenzie King, then Prime Minister, and later by the Hon. Lionel Chevrier, Minister of Transport, until Nov. 2 when the Hon. L. B. Pearson, Secretary of State for External Affairs, assumed the leadership. The Delegation included members of the Senate and House of Commons, with whom were associated delegates and advisers from the Department of Finance and the Department of External Affairs. The Assembly failed to complete its heavy agenda and it was decided to hold a second part of the third session at Lake Success in April, 1949.

**Admission of New Members.**—In 1948 only one new member state, Burma, was admitted to the United Nations. Applications by Italy and Ceylon were both rejected by the Soviet veto. The differences between the Soviet bloc and the non-Communist members prevented further consideration of other outstanding applications for membership, namely those of the Hashemite Jordan Kingdom, Ireland, Portugal and Austria, supported by the Western Powers, and those of Albania, Bulgaria, Finland, Hungary, the Mongolian Peoples' Republic and Roumania, backed by the U.S.S.R. The application of Israel was considered by the Security Council in December, 1948, but failed to secure the seven votes required to justify a favourable recommendation to the General Assembly.

**Indonesia.**—The Indonesian problem, which had been a concern of the Security Council since August, 1947, appeared to be well on its way to settlement when the year 1948 opened. On Jan. 17, the Netherlands and the Indonesian Republicans signed a military truce and agreed to a set of principles offered by a United Nations Committee of Good Offices to serve as a basis for a political settlement. This Renville agreement, which was supplemented two days later with additional principles, was acknowledged in February by the Security Council. A Canadian resolution commending the parties for concluding a truce agreement, and asking the Committee of Good Offices to return to Indonesia and assist the parties in working out a political settlement was also accepted by the Security Council.

After several months of fruitless negotiations a renewed attempt to reach a settlement was made in September on the basis of new proposals submitted by the United States member of the Committee of Good Offices. Despite further negotiations between high officials of the Netherlands and Republican Governments, the situation again became deadlocked and, on Dec. 14, the Netherlands Government announced its decision to go on with its intentions to form a United States of Indonesia under the Netherlands Crown. Five days later the Netherlands launched military operations and invaded Republican territories. This action was severely criticized by the Committee of Good Offices and, in the Security Council, Canada's representative deplored the resumption of military operations but opposed a United States resolution calling for a withdrawal of Netherlands troops on the ground that it could not be enforced.

**Palestine.**—Both in the Security Council and in the General Assembly Canada contributed to efforts to bring about a peaceful settlement of the Palestine conflict. Since the Commission which was to have carried out the Assembly's partition plan of November, 1947, was unable to function, a special session of the Assembly decided in May, 1948, to substitute for it a Mediator, whose proposals for a peaceful settlement were completed just before his assassination in September. The Mediator's proposals were modified by an Assembly decision of Dec. 11 which was supported by Canada. This provided for a Conciliation Commission to assist Arabs and Jews to reach an agreed settlement, to plan an international regime for Jerusalem and to supervise the repatriation of refugees.

Meanwhile Canada's representative in the Security Council had given full support to that body's unremitting efforts to check disorders in Palestine with the aid of the United Nations Mediator and a Truce Commission. Throughout the period of the first general cease-fire in June and the period of the truce imposed by the Security Council under threat of sanctions in July, Canada voted in favour of Security Council resolutions designed to reinforce the authority of United Nations personnel in Palestine and to restrain military drives which were renewed in October, November and December.

Canada was among those who held that Israel's application for membership should be considered at a later date.

**Korea.**—The Temporary Commission on Korea, with a mandate from the Assembly to "facilitate and expedite the national independence of Korea", acted as observer in the elections held in South Korea on May 10, and heard representations regarding the conduct of the elections. As instructed by the Assembly, the Commission continued in Korea to offer its services as a consultant, first to the newly elected Korean representatives, and later to the Government of the Republic of Korea. The Canadian member of the Commission was Dr. G. S. Patterson, of the Department of External Affairs. During the Third Session of the General Assembly, the Commission on Korea was reconstituted. The number of members was reduced from nine to seven, because of the decrease in the Commission's responsibilities, and Canada and the Ukraine were omitted from membership.

**Atomic Energy Commission.**—The record of the United Nations Atomic Energy Commission during 1948 is a discouraging one. Discussions of the Soviet Government's proposals of June, 1947, and of the organizational structure of an international control agency were continued but, after more than 240 meetings, the Commission reluctantly decided in May that it had reached an impasse which only the Security Council or the General Assembly could resolve.

In June the Security Council approved the resolution submitted by the representative of Canada that the whole question of the international control of atomic energy should be laid before the General Assembly "as a matter of special concern".

When the Assembly met at Paris, General A. G. L. McNaughton, speaking for Canada, proposed that the Assembly should approve the general findings and specific proposals put forward by the Atomic Energy Commission. After various amendments, this suggestion was adopted on Nov. 4. At the same time, the General Assembly requested the Atomic Energy Commission to resume its work in an attempt to resolve the impasse, and to take up any further questions which it might be "practicable and useful" to consider.

The record would have been more hopeful if the delegates of the U.S.S.R. had been prepared to put forward alternative plans for the international control of atomic energy that could be compared point by point with the majority proposals, but their suggestions have remained studiously vague.

Thus, in spite of the best efforts of nine out of the eleven members of the Atomic Energy Commission, the year 1948 did not see any significant advance on the road to international control of atomic energy, but rather a hardening of the positions taken up by the majority on the one hand, and by the Soviet Union and its satellites on the other.

**Commission for Conventional Armaments.**—The year 1948 saw equally limited progress in the field of general disarmament. As a member of the Security Council, Canada sat on the Commission for Conventional Armaments which is a subsidiary organ of the Council. Throughout the year, the deadlock between 'East' and 'West' prevented agreement in the Commission on the general principles which would govern the regulation and reduction of armaments and armed forces. The majority of the members, including Canada, took the view that adequate conditions of international security must be established to enable disarmament to proceed safely and equitably, and emphasized the need for a workable system of international inspection and control which would give assurance to all States that no State could take advantage of the disarmament of others. The U.S.S.R., on the other hand, favoured immediate reduction of armaments and armed forces, including atomic weapons, as an essential pre-condition of international security, and argued that any system of inspection and control must be established within the framework of the Security Council (i.e. subject to the veto). At the third session of the General Assembly a Soviet resolution along these lines was opposed by the majority of nations, including Canada, because of doubts as to whether the Soviet Union would permit effective international control and on the ground that the arbitrary arithmetical formula suggested by the U.S.S.R. would leave that country in a position of advantage in relation to those countries which, like the United States, the United Kingdom and Canada, had already substantially reduced their armed forces since the end of the War.

On Nov. 19, 1948, the General Assembly adopted a resolution that the Commission for Conventional Armaments should continue its work in formulating proposals for the general regulation and reduction of armaments.

**Berlin Currency Dispute.**—On Sept. 29 the Governments of the United Kingdom, United States and France referred the Berlin Dispute to the Security Council as a threat to international peace and security. The cause of the dispute, a Soviet imposed blockade on Berlin, had been in existence three months.

During these three months the Western Powers had attempted to meet Soviet objections to currency reform in Western occupied Germany. It was when these negotiations failed that the problem was referred to the Security Council. The Soviet representative denied the competence of the Security Council to deal with this problem and refused to take part in the Council's consideration of the Berlin dispute.

Between Oct. 6 and Oct. 25, members of the Security Council not direct parties to the dispute (including the Canadian representative) met to consider whether a basis for agreement existed. On Oct. 22 they presented a draft resolution calling upon the Soviet Union to raise the blockade and at the same time suggesting that the governments concerned should meet to discuss arrangements for the unification of Berlin currency. The "neutral" group then undertook to be represented on a committee of experts whose purpose was to seek a detailed agreement under which Berlin currency could be unified and communications restored.

This committee met at Paris and at Geneva under the chairmanship of Mr. N. A. Robertson, Canadian High Commissioner to the United Kingdom, in an attempt to reconcile the position of the countries concerned. At the end of the year its work was uncompleted.

**Other Political Questions.**—Other political questions discussed during the year included the alleged threat to international peace arising from events in Czechoslovakia, the future of Trieste, the India-Pakistan dispute, the relations of Spain with the United Nations, the trusteeship system applied to strategic areas, the report of the Special Committee on the Balkans, and the future of the former Italian colonies in Africa.

**Interim Committee.**—The Canadian delegation shared fully in the work of the Interim Committee established on an experimental basis by the General Assembly in November, 1947; to assist the Assembly in promoting international co-operation and in maintaining international peace and security. The Interim Committee met from the beginning of January to mid-July to consider the question of Korea; proposals for the revision of voting procedures in the Security Council; general principles of co-operation in maintaining international peace; and the advisability of giving a permanent mandate to the Interim Committee to assist the Assembly in discharging its responsibilities between sessions. Canada was a member, and a Canadian was the rapporteur of a nine-nation working group which, during May and June, prepared a draft recommendation to the General Assembly suggesting the types of Security Council decisions in which the veto should not operate.

**Economic and Social Council.**—The Sixth Session of the Council was held at New York, Feb. 2 to Mar. 11, and the Seventh at Geneva, July 19 to Sept. 7. At its Sixth Session the Council was largely concerned with general supervision over the work of subsidiary organs and specialized agencies, and with the development of working procedures adapted to the discharge of its functions. An *ad hoc* committee, of which Dr. G. F. Davidson, Deputy Minister of Welfare of the Department of National Health and Welfare was chairman, was set up to study the better co-ordination of the work of the Council, its commissions, and the specialized agencies. The Seventh Session of the Council dealt chiefly with substantive questions and made some progress with the planning or revising of international conventions relating to the suppression of the traffic in women and children; the prevention of prostitution; death certificates for missing persons; freedom of informa-

tion; and the gathering and international transmission of news. The scope of the Convention of 1931 limiting the manufacture and regulating the distribution of narcotic drugs was enlarged by a protocol to include the newly developed synthetic drugs; Canada became a signatory to this protocol during the Third Session of the General Assembly.

Canadian experts are members of the following Functional Commissions of the Economic and Social Council: Economic and Employment, Social, Population, Statistical, and Narcotic Drugs. Each of these held one meeting in 1948.

**Specialized Agencies.**—Two new organizations passed through the interim stage of their existence and became legally constituted specialized agencies; the International Refugee Organization, and the World Health Organization. Canada is a member of these and of eight other specialized agencies: the International Labour Organization; the International Civil Aviation Organization; the Food and Agriculture Organization; the United Nations Education, Scientific and Cultural Organization; the International Telecommunications Union; the International Bank for Reconstruction and Development; the International Monetary Fund; and the Universal Postal Union. In addition, there were several international conferences directed to the formation of three new agencies: the International Trade Organization; the Inter-governmental Maritime Consultative Organization; and the International Meteorological Organization. None of these is as yet established in final form.

## PART IV.—DIPLOMATIC REPRESENTATION\*

### Section 1.—Representatives of Canada in Other Countries

**Argentina:** (Established 1941.)

*Ambassador:* MR. J. D. KEARNEY, M.C., K.C.

Address: Bartolome Mitre, 478, Buenos Aires.

**Australia:** (Established 1939.)

*High Commissioner:* MAJOR-GENERAL THE HON. L. R. LAFLECHE, D.S.O.

Address: State Circle, Canberra.

**Belgium:** (Established 1939.)

*Ambassador:* MR. VICTOR DORÉ, C.M.G. (presented Letter of Credence Jan. 21, 1947).

Address: 46, Rue Montoyer, Brussels.

**Brazil:** (Established 1941.)

*Ambassador:* MR. J. S. MACDONALD (presented Letter of Credence June 3, 1948).

Address: Avenida President Wilson, 165, 7th Floor, Rio de Janeiro.

**Chile:** (Established 1942.)

*Ambassador:* MR. C. F. ELLIOTT, C.M.G., K.C. (presented Letter of Credence Apr. 3, 1947).

Address: Bank of London and South America Bldg., Santiago.

\* Revised by the Department of External Affairs, Ottawa, as at July 21, 1949.

**China:** (Established 1942.)

*Ambassador:* THE HON. T. C. DAVIS, K.C. (presented Letter of Credence May 21, 1947).

Address: No. 3 Ping Tsang Hsiang, Nanking.

**Cuba:** (Established 1945.)

*Minister:* DR. E. H. COLEMAN, C.M.G., K.C. (presented Letter of Credence Apr. 8, 1949).

Address: Avenida de las Misiones No. 17, Havana.

**Czechoslovakia:** (Established 1942.)

*Chargé d'Affaires ad interim:* MR. R. M. MACDONNELL.

Address: Krakowska 22, Prague, 2.

**Denmark:** (Established 1946.)

*Minister:* MR. H. LAUREYS (presented Letter of Credence July 12, 1947).

Address: Osterbrogade 26, Copenhagen.

**Finland:** (Established 1949.)

*Minister:* MR. T. A. STONE.

Address: c/o Canadian Legation, Strandvagen 7-C, Stockholm, Sweden.

**France:** (Established 1928.)

*Ambassador:* MAJOR GENERAL GEORGE P. VANIER, D.S.O., M.C. (presented Letter of Credence Dec. 20, 1944).

Address: 72 Avenue Foch, Paris XVI.

**Greece:** (Established 1943.)

*Ambassador:* MR. GEORGE L. MAGANN.

Address: 31 Queen Sofia Boulevard, Athens.

**Iceland:** (Established 1949.)

*Minister:* MR. E. J. GARLAND.

Address: c/o Canadian Legation, Fridtjof Nansens Plass 5, Oslo, Norway.

**India:** (Established 1946.)

*High Commissioner:* MR. W. F. CHIPMAN, K.C.

Address: 4 Aurangzeb Road, New Delhi.

**Ireland:** (Established 1940.)

*High Commissioner:* THE HON. W. F. A. TURGEON, K.C. (Nov. 6, 1946).  
(Absent.)

*Acting High Commissioner:* MR. D. M. JOHNSON (Feb. 1, 1949).

Address: 92 Merrian Square West, Dublin.

**Italy:** (Established 1947.)

*Ambassador:* MR. JEAN DÉSY, K.C. (presented Letter of Credence June 26, 1948).

Address: Via Saverio Mercadante 15, Rome.

**Luxembourg:** (Established 1945.)

*Minister:* MR. VICTOR DORÉ, C.M.G. (presented Letter of Credence Mar. 4, 1947).

Address: c/o Canadian Embassy, 46 Rue Montoyer, Brussels, Belgium.

**Mexico:** (Established 1944.)

*Ambassador:* MR. C. P. HÉBERT (presented Letter of Credence Feb. 24, 1949).

Address: Edificio Internacional, Paseo de la Reforma, No. 1, Mexico City.

**Netherlands:** (Established 1939.)

*Ambassador:* MR. P. DUPUY, C.M.G. (presented Letter of Credence Mar. 18, 1947).

Address: Sophialaan 1A, The Hague.

**New Zealand:** (Established 1940.)

*High Commissioner:* MR. A. RIVE (June 1, 1946).

Address: Government Life Insurance Bldg., Customs Quay, Wellington.

**Norway:** (Established 1943.)

*Minister:* MR. E. J. GARLAND (presented Letter of Credence Oct. 21, 1947).

Address: Fridtjof Nansens Plass 5, Oslo.

**Peru:** (Established 1944.)

*Ambassador:* MR. J. A. STRONG (presented Letter of Credence June 21, 1947).

Address: Edificio Boza, Plaza San Martin, Lima.

**Poland:** (Established 1942.)

*Chargé d'Affaires ad interim:* MR. K. P. KIRKWOOD (appointed Feb., 1947).

Address: Hotel Bristol, Warsaw.

**Sweden:** (Established 1947.)

*Minister:* MR. T. A. STONE (presented Letter of Credence June 10, 1949).

Address: Strandvagen 7-C, Stockholm.

**Switzerland:** (Established 1947.)

*Chargé d'Affaires ad interim:* MR. P. E. RENAUD.

Address: Thunstrasse 95, Berne.

**Turkey:** (Established 1947.)

*Ambassador:* MAJOR-GENERAL VICTOR W. ODLUM, C.B., C.M.G., D.S.O., V.D. (presented Letter of Credence Nov. 26, 1947).

Address: 211 Ayranci Baglari Kavaklidere, Ankara.

**Union of South Africa:** (Established 1940.)

*High Commissioner:* MR. E. D. MCGREER (Feb. 1, 1947).

Address: Grand Parade Bldg., Cape Town.

**Union of Soviet Socialist Republics:** (Established 1942.)

*Chargé d'Affaires ad interim:* MR. JOHN B. C. WATKINS (appointed August, 1948).

Address: 23 Starokonyushny Pereulok, Moscow.

**United Kingdom:** (Established 1880.)

*High Commissioner:* MR. L. D. WILGRESS (Mar. 16, 1949).

Address: Canada House, Trafalgar Square, London, S.W.1.

**United States of America:** (Established 1927.)

*Ambassador:* MR. H. H. WRONG (presented Letter of Credence Nov. 8, 1946).

Address: 1746 Massachusetts Avenue, Washington, D.C.

**Yugoslavia:** (Established 1948.)

*Minister:* MR. E. VAILLANCOURT (presented Letter of Credence Feb. 26, 1948).

Address: Garasaninova 20, Belgrade.

## MILITARY AND LIAISON MISSIONS

**Germany:**

*Head of Military Mission:* LIEUTENANT-GENERAL MAURICE POPE, C.B., M.C.

Address: Commonwealth House, 40 Johannesberger St., Wilmersdorf, Berlin.

**Japan:**

*Head of Liaison Mission:* MR. E. H. NORMAN.

Address: 16 Omote-Machi, 3 Chome, Akaska-Ku, Tokyo.

## CONSULATES

**Brazil:**

*Consul:* MR. J. C. VAN TIGHEM.

Address: Rua 7 d'Abril 252, São Paulo.

**China:**

*Consul General:* DR. GEORGE S. PATTERSON.

Address: 27 The Bund, Shanghai.

**Germany:**

*Consul:* MR. A. J. HICKS.

Address: Political Adviser's Office, A.P.O. 757, U.S. Army, Frankfurt.

**Portugal:**

*Consul General:* MR. L. S. GLASS.

Address: Rua Rodrigo Fonseca, 103-4°, Lisbon.

**United States of America:**

Boston 16, Mass.

*Consul:* MR. T. F. M. NEWTON.

Address: 532 Little Building, 80 Boylston Street.

Chicago 6, Ill.

*Consul General:* MR. E. TURCOTTE.

Address: Suite 800, Daily News Building, 400 W. Madison Street.

Detroit 26, Mich.

*Consul:* MR. JAMES J. HURLEY.

Address: 1035 Penobscot Building.

## CONSULATES—concluded

## United States of America—concluded

New York, N.Y.

*Consul General:* MR. H. D. SCULLY.

Address: 620 Fifth Avenue.

Portland, Maine.

*Honorary Vice Consul:* MR. A. LAFLEUR.

Address: Office 503, 120 Exchange Street.

San Francisco 4, Cal.

*Consul General:* MR. HARRY A. SCOTT.

Address: 400 Montgomery Street.

## Venezuela:

*Consul General:* MR. C. S. BISSETT.

Address: No. 805, Edificio America, Esquina Veroes, Caracas.

## Section 2.—Representatives of Other Countries in Canada

## Argentina: (Established 1941.)

*Ambassador:* HIS EXCELLENCY ATILIO E. GARCIA MELLID (Apr. 26, 1949).

Address: 193 Sparks Street, Ottawa.

## Australia: (Established 1940.)

*High Commissioner:* THE RT. HON. FRANCIS M. FORDE (Jan. 18, 1947).

Address: 24 Sussex Street, Ottawa.

## Belgium: (Established 1937.)

*Ambassador:* HIS EXCELLENCY VICOMTE DU PARC (Feb. 8, 1949).

Address: 170 Laurier Avenue East, Ottawa.

## Brazil: (Established 1941.)

*Ambassador:* HIS EXCELLENCY DR. ACYR DO NASCIMENTO PAES (Apr. 26, 1946).

Address: 400 Wilbrod Street, Ottawa.

## Chile: (Established 1942.)

*Ambassador:* HIS EXCELLENCY GENERAL ARNALDO CARRASCO (June 5, 1947).

Address: Suite 215, 56 Sparks Street, Ottawa.

## China: (Established 1942.)

*Ambassador:* HIS EXCELLENCY LIU CHIEH (June 7, 1947).

Address: 410 Besserer Street, Ottawa.

## Cuba: (Established 1945.)

*Minister:* HIS EXCELLENCY DR. MARIANO BRULL (Nov. 2, 1945).

Address: 499 Wilbrod Street, Ottawa.

**Czechoslovakia:** (Established 1942.)

*Chargé d'Affaires ad interim:* MR. STANISLAV KLIMA (Mar. 11, 1948).  
Address: 171 Clemow Avenue, Ottawa.

**Denmark:** (Established 1946.)

*Minister:* HIS EXCELLENCY G. B. HOLLER (Mar. 7, 1946).  
Address: 107 Sparks Street, Ottawa.

**Finland:** (Established 1947.)

*Minister:* HIS EXCELLENCY URHO VILPITON TOIVOLA (Jan. 7, 1948).  
Address: 140 Wellington Street, Ottawa.

**France:** (Established 1928.)

*Charge d'Affaires ad interim:* MR. JEAN BASDEVANT (June 12, 1949).  
Address: 42 Sussex Street, Ottawa.

**Greece:** (Established 1942.)

*Ambassador:* HIS EXCELLENCY CONSTANTINE SAKELLAROPOULO (Nov. 12, 1945).  
Address: Chateau Laurier, Ottawa.

**Iceland:** (Established 1947.)

*Minister:* HIS EXCELLENCY THOR THORS (Jan. 20, 1948).  
Address: Chateau Laurier, Ottawa.

**India:** (Established 1947.)

*High Commissioner:* THE HON. SARDAR HARDIT SINGH MALIK, C.I.E., O.B.E.  
(Sept. 3, 1947).  
Address: 114 Wellington Street, Ottawa.

**Ireland:** (Established 1939.)

*High Commissioner:* THE HON. JOHN J. HEARNE, S.C. (Aug. 18, 1939).  
Address: 140 Wellington Street, Ottawa.

**Italy:** (Established 1947.)

*Ambassador:* HIS EXCELLENCY MARIO DI STEFANO (Nov. 8, 1948).  
Address: 384 Laurier Avenue East, Ottawa.

**Luxembourg:** (Established 1949.)

*Minister:* HIS EXCELLENCY HUGUES LE GALLAIS (Nominated).

**Mexico:** (Established 1944.)

*Ambassador:* HIS EXCELLENCY PRIMO VILLA MICHEL (Sept. 15, 1947).  
Address: 11 Metcalfe Street, Ottawa.

**Netherlands:** (Established 1939.)

*Ambassador:* HIS EXCELLENCY DR. J. H. VAN RÖIJEN (Apr. 2, 1947).  
Address: 168 Laurier Avenue East, Ottawa.

**New Zealand:** (Established 1943.)

*High Commissioner:* THE HON. JAMES THORN (May 12, 1947).  
Address: 107 Wurtemberg Street, Ottawa.

**Norway:** (Established 1942.)

*Minister:* HIS EXCELLENCY DANIEL STEEN (Apr. 2, 1942).  
Address: 509 Plaza Building, 45 Rideau Street, Ottawa.

**Pakistan:** (Established 1949.)

*High Commissioner:* THE HON. MOHAMMED ALI (July 9, 1949).

Address: Chateau Laurier, Ottawa.

**Peru:** (Established 1944.)

*Ambassador:* HIS EXCELLENCY MANUEL CACHO SOUSA (May 12, 1949).

Address: 111 Sparks Street, Ottawa.

**Poland:** (Established 1942.)

*Minister:* HIS EXCELLENCY EUGENIUSZ JAN MILNIKIEL (Apr. 22, 1948).

Address: 183 Carling Avenue, Ottawa.

**Sweden:** (Established 1943.)

*Minister:* HIS EXCELLENCY PER WIJCKMAN (Aug. 4, 1943).

Address: 720 Manor Road, Rockcliffe Park.

**Switzerland:** (Established 1945.)

*Minister:* HIS EXCELLENCY DR. VICTOR NEF (Apr. 25, 1946).

Address: 5 Marlborough Avenue, Ottawa.

**Turkey:** (Established 1944.)

*Ambassador:* HIS EXCELLENCY NURULLAH ESAT SÜMER (nominated). (Nov. 12, 1947).

Address: Chateau Laurier, Ottawa.

**Union of South Africa:** (Established 1938.)

*High Commissioner:* MR. ALFRED ADRIAN ROBERTS (nominated). (Jan. 17, 1949).

Address: 15 Sussex Street, Ottawa.

**Union of Soviet Socialist Republics:** (Established 1942.)

*Chargé d'Affaires ad interim:* MR. MIKHAIL V. DEGTIAR (June 5, 1949).

Address: 285 Charlotte Street, Ottawa.

**United Kingdom:** (Established 1928.)

*High Commissioner:* THE HON. SIR ALEXANDER CLUTTERBUCK, K.C.M.G., M.C. (May 29, 1946).

Address: Earnscliffe, Ottawa.

**United States of America:** (Established 1927.)

*Ambassador:* HIS EXCELLENCY THE HON. LAURENCE A. STEINHARDT (Nov. 1, 1948).

Address: 100 Wellington Street, Ottawa.

**Uruguay:** (Established 1947.)

*Minister:* HIS EXCELLENCY CÉSAR MONTERO DE BUSTAMANTE (Mar. 11, 1948).

Address: 7 Delaware Avenue, Ottawa.

**Yugoslavia:** (Established 1947.)

*Minister:* HIS EXCELLENCY MATO A. JAKŠIĆ (July 8, 1948).

Address: 259 Daly Avenue, Ottawa.

*NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

The records accumulated at the decennial censuses of Canada since Confederation in 1867 to the latest census to date, 1941, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the Census a most important statistical measure of accomplishment and progress.

The salient aspects of population growth under each main heading shown in the conspectus are covered but not necessarily in any one edition. The Canada Year Book can do no more than summarize the broad results of the census. More detailed information can be obtained from the census publications.

The main legal reason for a periodic census under the constitution of Canada is to determine representation in the House of Commons: this, according to the British North America Act, is based on population (see p. 98). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from the census data. In view of this each person is counted as belonging to the locality of his regular domicile, rather than to the place he may be at the date of enumeration.

The modern nation-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can therefore be used in the regulation and general administration of public affairs, social security and rehabilitation programs, etc.

**History of the Census.**—An outline of the history of the census is given at pp. 96-97 of the 1947 edition of the Year Book.

\* This Chapter has been revised in the Census (Demography) Division, Dominion Bureau of Statistics.

**Growth of Population.**—A brief résumé of the population history of Canada from the first census in 1666, when 3,215 persons were enumerated, to the Census of 1941, when the figure was 11,506,655, places Canada among the leading countries of the Commonwealth in the rate of population growth. The inflow of capital and the opening up of new and vast areas with the consequent stimulation of immigration in the early part of the twentieth century, was the latest episode in the transformation of the central prairie region, which, in the course of 40 years, has been organized into provinces and developed with such promise. The total population of Canada at the end of the nineteenth century was approximately 5,400,000; it had about doubled this figure by 1931. The general increase in the population of European countries during the entire nineteenth century was approximately three-fold; Canada equalled this rate of progress during the 60 years from 1871 to 1931.

In the decade 1901-11 immigration alone totalled 1,800,000. This figure was the main factor in the gain of 34·2 p.c. registered by the total population of Canada in that decade, which was relatively larger than the growth of any modern country during the same period.

The next decade started out with an intensification of this immigration movement, but with the outbreak of the First World War a recession set in. The effects of that War upon the Canadian population were both direct and indirect. Nearly 60,000 members of the Canadian Forces died overseas and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British Isles residents, most of them recent immigrants, left Canada to join the Armed Forces of the United Kingdom and did not return; the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties. However, the net result over the ten years was a population increase of 21·9 p.c. or the largest increase for any modern country in that decade with the exception of Australia where an increase of 22·0 p.c. was recorded.

The Census of 1931 showed a further increase of 18·1 p.c. over 1921. Natural increase and immigration contributed 1,325,256 and 1,509,136, respectively, although the net gain was only 1,588,837 since estimated emigration was 1,245,555 for the ten years. Census returns of Great Britain for 1921-31 showed an increase of 4·7 p.c., equalling that of the previous decade. New Zealand in the ten-year interval 1911-21 showed an increase of 19·8 p.c. and in the decade 1921-31, 19·3 p.c. A census of Australia was not taken in 1931, but the official estimate of population based on that taken in 1933 gave an increase of 19·8 p.c. as against 22·0 p.c. for the period 1911-21. Census figures for the United States showed an increase in population of 14·9 p.c. for 1910-20, 16·1 p.c. for 1920-30 and 7·2 p.c. for 1930-40.

The eighth census of Canada taken June 2, 1941, gave the population as 11,506,655 as compared with 10,376,786 as of June 1, 1931, an increase of 1,129,869 or 10·9 p.c. in the decade. During the greater part of this decade, Canada, along with all other countries, was faced with a prolonged and severe economic depression; immigration was still further restricted by government regulations as well as by economic necessity. The figures for immigrant arrivals were actually reduced from 1,166,004 in the ten-year period 1921-31 to 140,361 in 1931-41. The natural

increase for this period showed a reduction of about 11 p.c. and, since immigration was reduced more than 88 p.c. over the decade, the net increase in population was due almost entirely to the favourable birth and death rates of the established population.

**Population Statistics for Newfoundland.**—On Mar. 31, 1949, the union of Newfoundland with Canada (see Chapter III) became effective. The latest Newfoundland census was taken in 1945 and it will not be possible to present population statistics on a really comparable basis with the other Canadian provinces until the Census of 1951 is taken. However, since there will naturally be keen interest in background information concerning the population of Newfoundland before union, a number of key tables based on previous Newfoundland censuses are given in Section 14 of Part II, pp. 171-175: in principle this presentation follows the Year Book treatment of quinquennial census data which are not presented with decennial census figures in the standard tables except in the cases of the populations of individual urban centres (see Tables 3 and 5 of Part I).

## PART I.—STATISTICS OF GENERAL POPULATION

### Section 1.—Growth of the Population

Since the creation of the Dominion of Canada in 1867, decennial censuses have been taken as of Apr. 2, 1871, Apr. 4, 1881, Apr. 5, 1891, Apr. 1, 1901, June 1, 1911, 1921, 1931 and June 2, 1941. Summary figures are given in Table 1.

#### 1.—Population of Canada, by Provinces and Territories, Decennial Census Years 1871-1941

NOTE.—The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 are shown at p. 165. Inter-censal estimated populations from 1867-1904 will be found at p. 141 of the 1936 Year Book; from 1905-30 at p. 127 of the 1946 edition; and from 1931-49 in Table 7, p. 155, of the present edition.

<sup>1</sup> Corrected as a result of the Boundaries Extension Acts, 1912. <sup>2</sup> Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for 1921 includes 485 members of the Royal Canadian Navy who were recorded separately. <sup>3</sup> Corrected by transfer of population of Fort Smith (368) to the Northwest Territories. <sup>4</sup> The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba.

The land area and density of the population per square mile is given by provinces in Table 2 for the census years 1911-41. Similar information by counties or census divisions for the Census of 1941 is given at pp. 109-112 of the 1947 Year Book.

## 2.—Land Area and Density of Population, by Provinces and Territories, Census Years 1911-41

<sup>1</sup> The populations of Ontario, Quebec, Manitoba and the Northwest Territories were adjusted for 1911 according to the provisions of the Boundaries Extension Acts, 1912. <sup>2</sup> Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for 1921 includes 485 members of the Royal Canadian Navy who were recorded separately.

The growth of Canadian cities with populations of over 30,000 in 1941, together with years of incorporation as cities, is shown in Table 3. All urban centres having populations of 1,000 to 30,000 in 1941 are listed in Table 5.

## 3.—Cities With Populations of Over 30,000 at the Latest Census Compared with Census Years 1871 and 1891-1931

NOTE.—Cities in which a Board of Trade exists are indicated by an asterisk (\*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been adjusted to cover the same area as the 1941 Census. Figures for 1881 are given at p. 144 of the 1948-49 Year Book.

<sup>1</sup> The 1946 Quinquennial Census figures cover urban centres of the Prairie Provinces only. <sup>2</sup> Census of Newfoundland for 1935. <sup>3</sup> Census of Newfoundland for 1945. Includes all persons living within the incorporated limits of the city.

All the larger cities have in their neighbourhoods growing 'satellite' towns or other densely settled areas in close economic relationship with the central municipality. It has been advisable therefore, to calculate the total populations for the metropolitan areas of these greater cities: they are shown for 1931 and 1941 in Table 4.

#### 4.—Population of Greater Cities, 1931 and 1941

Greater City	1931	1941	Greater City	1931	1941

The traditional movement of population on the North American Continent from east to west has not been apparent in Canadian statistics of the past two decades. Considerable variation is revealed by the intercensal comparison between 1931 and 1941, by the ration book counts of 1944 and 1946 and by the special survey of interprovincial migration covering 1946-47.

The most spectacular changes are shown in the Prairie Provinces and in British Columbia. The three Prairie Provinces lost by migration about 250,000 people between 1931 and 1941 and almost the same number from 1941 to 1946. British Columbia gained—during the 1930's at the rate of about 8,000 a year and during the 1940's at about 25,000 a year. According to the most recent figures available there is no sign of a falling-off in British Columbia's growth. On an absolute basis, Ontario received almost the same number of people as British Columbia; in relation to its larger population this growth was only one quarter as important. Quebec's net change was very small relative to its population. Nova Scotia gained during the war years and lost immediately after the War, while the Maritime Provinces as a whole lost population over the past two decades.

Province	June 1, 1931 to June 1, 1941	June 1, 1941 to Apr. 1, 1944	Apr. 1, 1944 to Sept. 1, 1946	June 1, 1946 to June 1, 1947	June 1, 1947 to June 1, 1948

### Section 3.—Intercensal Estimates of Population

Intercensal estimates of the population serve many uses. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. More recently, they have proved useful for estimates of labour force and other population characteristics on data collected in sample surveys.

Estimates are constructed in the first place for the total population of Canada and each province. It is a requirement that these be made available about the date to which they apply, June 1 of each year. As final figures on the components of population change are not ready at that date, the numbers of births, deaths and immigrants are partly filled in by extrapolation so that a preliminary figure is secured for the June to May interval. To avoid a cumulative error the calculation in effect starts afresh with the latest preceding census for each year's estimates and uses the most up-to-date figures then available. To the census figures are added the births of the intervening years and the deaths are subtracted. Immigrants are added and emigrants are subtracted. On the last item of this calculation there is least information; it is possible to ascertain the number of Canadians entering the United States from United States immigration figures, and sometimes the same for the United Kingdom but no data are available for other countries.

The program of population estimates calls for two figures to be given in respect of each year; one based on preliminary materials, as described above, necessarily involving an extrapolation of birth, death and immigration returns, and the other on final figures subject to no further change which can be made available only when the last item of subsequent information has been secured. This last item is the succeeding decennial census. There is no theoretical gain in making minor adjustments which are within the band of error to which the figures are subject in any case, and such adjustments in practice cause confusion to users. Since estimates for successive years are independently calculated back to the latest census the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the year following. As there is much interest attaching to the year-to-year balance, the following statement, which gives all available data on that point, is included.

Year	Calendar-Year Data				Estimated Population as at June <sup>1</sup>
	Births	Deaths	Natural Increase	Immig- ration	
1941.....	255,224	114,500	140,724	9,325	11,490,000

## 7.—Estimates of Population, by Provinces, Intercensal Years 1931-49

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figures. Figures for 1867-1904 will be found at p. 141 of the 1936 Year Book and for 1905-30 at p. 127 of the 1946 edition. Figures for all provinces for 1931 and 1941 are decennial census figures while those for the Prairie Provinces for 1936 and 1946 are quinquennial census figures.

## PART II.—ANALYSES OF GENERAL POPULATION

## Section 1.—Rural and Urban Population

The population residing in cities, towns and incorporated villages has been defined for census purposes as 'urban' and that outside such localities as 'rural'. The distinction between rural and urban populations in Canada, therefore, is a distinction of provincial legal status rather than of size of aggregation of population within a limited area. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban,\* the line of demarcation between rural and urban population is not uniformly drawn throughout Canada.

This basis of comparing rural and urban populations adhered to throughout the census analyses is adopted for Canada because the necessary comparable data over a long period of years required for comparison by degree of urbanization does not exist. Obviously, the populations of villages of less than 1,000 cannot be regarded as truly urban, although there is reason, for certain purposes, to distinguish them from the surrounding rural populations, in that they enjoy definite cultural advantages not possessed by the strictly rural municipalities.

Table 2 has been prepared to overcome some of the difficulties involved, and to provide a basis for comparison of urban centres by size with those of other countries. These data enable places outside any required size limits to be readily excluded. Similar data, by provinces, will be found in Vol. II of the Census of 1941.

\* In Saskatchewan the original legislation of 1908 provided that a community of 50 persons on an area not greater than 640 acres might be incorporated. Several amendments have since been made and, as the Act now stands, 100 people resident on an area not greater than 240 acres may be incorporated. The Ontario law, on the other hand, requires that a village before it can be incorporated must have a population of 750 on an area not exceeding 500 acres.

During the latest four decades there has been a radical shifting in the distribution of the Canadian population from rural to urban districts. The change has been continuous throughout the period. In the decade ended 1941 the proportion of urban population increased from 53.7 p.c. to 54.3 p.c. Urban communities absorbed over 60 p.c. of the total increase in population during that decade and the urban population of Canada in 1941 exceeded the rural by 998,177. Out of every 1,000 persons in the country, 457 were resident in rural and 543 in urban communities on June 2, 1941, as compared with 463 in rural and 537 in urban communities on June 1, 1931; 505 in rural and 495 in urban on June 1, 1921; and 546 in rural and 454 in urban on June 1, 1911. In this trend to urbanization of population, Canada is by no means unique. The same change has characterized virtually all western nations to a greater or less degree during the past century.

## Section 2.—Sex and Age Distribution

**Sex.**—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males, although this condition has been greatly modified in more recent years. In 1666, during the early years of settlement by French immigrants, 63·3 p.c. of the population were males. In 1784, when British immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation the newer sections of Canada—the west and the northwest—have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population, whereas for Western Canada it varied between 53 p.c. and 59 p.c.

### 3.—Sex Distribution of the Population, by Provinces and Territories, Census Years 1911-41

NOTE.—Figures for the Censuses of 1871, 1881, 1891 and 1901 are given at p. 150 of the 1948-49 Year Book.

<sup>1</sup> Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

Immigration has influenced the sex distribution of the population, as between provinces, in widely different degree. In the older settlements of Quebec and parts of New Brunswick and Ontario, where the populations are of French basic stock, immigration has not played as great a part in upsetting the normal distribution of the sexes as it has in the other provinces. Even in Ontario immigrants from Continental European countries do not settle as readily and are not assimilated as completely as in the newer western provinces.

A characteristic of population distribution since 1911 has been the rapid growth of urban centres due to the far-reaching developments in manufacturing that have entirely changed the economic picture. Summary figures showing the disparity between the sexes in the matter of urban concentration in 1911, 1921, 1931 and 1941 in the total population are given in the following tabulation. In urban centres where the percentage of males is large the percentage of females is also large. Each decade emphasizes the greater opportunities for female employment in urban centres as compared with rural districts.

Item	1911	1921	1931	1941
Excess of all males over all females per 100 of total population.....	6·07	3·09	3·59	2·56
Percentage of females in urban centres to all females.....	47·12	51·78	55·98	56·61
Percentage of males in urban centres to all males.....	43·91	47·41	51·57	52·18
Excess of urban females over urban males per 100 of urban population	-2·54	1·32	0·52	1·52

<sup>1</sup> White population only.

Estimates of the population by age and sex for the intercensal years 1942-48 are given in Table 5, p. 159.

**Age.**—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the very heavy immigration of the early years of the century (1900-11) is indicated by the fact that, in 1901, 175 persons per 1,000 of the total population were in the age group 20-29 years and 131 persons per 1,000 in the group 30-39 years: a decade later, 190 per 1,000 were in the former group and 143 in the latter. Since immigration slowed down very decidedly after the outbreak of war in 1914, the influence of these earlier accretions to the population has crept through the upper age groups year by year until it has now reached those of the population in the 'fifties'.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent migration and a lower birth rate—factors that were emphasized during the depression years. In 1921 the number per 1,000 of total population between 40 and 59 years of age was 183.0; it was 201 in 1931 and 210 in 1941. Greater proportional increases, however, are shown by the group 60 years of age or over; this group represented 75 per 1,000 of the total population in 1921, 84 in 1931 and no less than 102 per 1,000 in 1941.

**Estimates of Population by Sex and Age.**—The figures for 1941 in Table 5 are those of the Census. For the other years they are estimates, calculated from the census figures, the births and deaths in each year, and known migration into and out of the country.

The starting point in this calculation is the population of the 1941 Census, taken at the beginning of June. The number of children under one year of age on June 1 of each subsequent year was obtained by subtracting the number who had died during the previous 12 months from the number who had been born. At each other year of age, the deaths at that age were subtracted from the census figures to give an estimate of the number at the next higher age in the following year. This process was carried forward for each year and gave what may be called the 'expected' figures of population for that year. These expected figures are later to be compared with the actual figures of the 1951 Census, the differences at each age noted, and the estimates revised in the light of these differences.

The population of Canada in 1931 and 1941 by sex and age is shown graphically in the Chart facing p. 232.

### Section 3.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably the most fundamental. Its incidence is twofold: 'vital' and 'economic and social'.

The vital basis lies in the influence of the marriage state on the fertility of a population and, from this angle, close analyses of marital status, by age, are important. The ages of females between 15 and 45 years have more significance than those of males; if the proportion of females in this group is small, the expected proportion of births will also be small. It has been shown that for the Canadian population the combined influences of age of the population, age of the married females, and proportion of females married has become steadily more favourable to the birth rate from 1871 to 1921 but that, since the latter date, the trend has been less favourable.

#### 6.—Marital Status of the Population, 15 Years of Age or Over, by Sex, Census Years 1911-41

NOTE.—Figures for censuses previous to 1911 are not comparable.

Year and Sex	Single		Married		Widowed		Divorced and Legally Separated		Total <sup>1</sup>
	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.

1941..... M.	1,708,528	39.8	2,363,528	55.2	170,743	4.0	42,770	1.0	4,281,237
F.	1,328,489	33.0	2,292,478	56.9	354,378	8.8	51,399	1.3	4,026,867

<sup>1</sup> Includes persons whose marital status was not stated; percentages are based on stated condition.

In Canada as a whole there are more married males than married females. Other striking statistics of marital status are the great preponderance of widows compared to widowers and the large and increasing numbers of divorced and legally separated persons.

Marital status of the 1941 population 15 years of age or over, by provinces and sex, is shown at p. 102 of the 1945 Year Book.

### Section 4.—Racial Origins

A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting at the time of the Census of 1921, has exceeded in numbers any one of the basic British Isles stocks.

### 7.—Racial Origins of the Population, Census Years 1921-41, with Percentage Distribution for 1941

NOTE.—Figures for the Censuses of 1871, 1881, 1901 and 1911 are given at p. 154 of the 1948-49 Year Book.

<sup>1</sup> Includes Bukovinian, Galician and Ruthenian.

<sup>2</sup> Includes 35,416 half-breeds.

Racial origins of the population by provinces and territories in 1941 are given at p. 106 of the 1945 edition of the Year Book.

## Section 5.—Religions

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The distribution of the principal denominations as at the Censuses of 1921, 1931 and 1941 is given in Table 8.

### 8.—Principal Religious Denominations of the Population, Census Years 1921-41, with Percentage Distribution for 1941

NOTE.—More detailed figures for the Censuses of 1871, 1881, 1891, 1901 and 1911 are given at p. 155 of the 1948-49 Year Book.

<sup>1</sup> Not included in "United Church".  
Greek Catholics in 1931 and 185,657 in 1941.

<sup>2</sup> Included in "United Church".

<sup>3</sup> Includes 186,654

Details of leading religious denominations by provinces are given at p. 109 of the 1945 edition of the Year Book; those of the populations of the nine leading cities are shown in Table 14 of the 1946 Year Book at p. 107.

## Section 6.—Birthplaces

Table 9 gives the total population by country of birth for the census years 1921, 1931 and 1941. The census, under birthplace, collects information on both country of birth of the immigrant arrivals in Canada and the province of birth of the native-born.

### 9.—Birthplaces of the Population, Census Years 1921-41

NOTE.—Figures for the Censuses of 1871, 1881, 1891, 1901 and 1911 are given at p. 158 of the 1948-49 Year Book.

<sup>2</sup> Includes Lithuania and Ukraine.

<sup>3</sup> Includes Denmark,

Iceland, Norway and Sweden.

<sup>4</sup> Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland,

Galicia and Roumania.

<sup>5</sup> Includes "birthplace not stated".

Detailed information on this subject will be found at pp. 111-117 of the 1943-44 Year Book and at pp. 156-158 of the 1948-49 edition.

## Section 7.—Citizenship

Until the Canadian Citizenship Act was passed in 1946 (the Act came into force on Jan. 1, 1947), the basic legislation governing Canadian nationality was to be found in the Immigration Act. The present legislation is outlined at pp. 1178-1184 of the 1948-49 edition of the Year Book.

### 10.—Citizenship of the Population, by Nativity, 1941

<sup>1</sup> Includes not stated.

<sup>2</sup> Includes 21,515 British-born persons who had not at the date of the census acquired Canadian domicile.

The Census of 1941 shows that less than 1 p.c. of the total Canadian-born and other British-born population had lost their Canadian citizenship through renunciation or marriage.

Over 80 p.c. of the United States-born persons in Canada, who form 2.7 p.c. of the total population, had become Canadian citizens together with 74.7 p.c. of the Continental European-born; of those born in Asiatic countries 72.7 p.c. remained aliens. Of the total population, only 2.4 p.c. were aliens.

## Section 8.—Languages and Mother Tongues

Statistics under this heading for the 1941 Census are given at pp. 122-123 of the 1947 Year Book.

## Section 9.—School Attendance

Statistics under this heading for the 1941 Census will be found at p. 138 of the 1943-44 Year Book.

## Section 10.—Blind and Deaf-Mutes

Statistics regarding blind and deaf-mutes are given at p. 126 of the 1945 Year Book and in greater detail in Vol. IV of the 1941 Census.

## Section 11.—Occupations

Figures for Canada, excluding Yukon and the Northwest Territories, show that 3,676,563 males and 833,972 females, 14 years or over, or a total of 4,510,535 persons, including members of the Armed Forces, were gainfully occupied at the time of the 1941 Census. Males represented 81.5 p.c. and females 18.5 p.c. of the total gainfully occupied. The population of the nine provinces consisted of 5,890,683 males and 5,599,030 females or a total of 11,489,713 persons. The gainfully occupied, therefore, accounted for 39.3 p.c. of the total population; gainfully occupied males representing 62.4 p.c. of the total male population and gainfully occupied females 14.9 p.c. of the total female population.

Summary tables of the occupations of the Canadian people for the 1941 Census are given at pp. 1062-1073 of the 1943-44 Year Book and at pp. 160-161 of the 1948-49 edition.

## Section 12.—Dwellings, Households and Families

Summary data on buildings, dwellings, households and families as at the date of the 1941 Census are given at pp. 120-126 of the 1946 Year Book, pp. 126-127 of the 1947 Year Book, and pp. 161-162 of the 1948-49 edition.

**Estimates of Households and Families, 1947-48.**—The statistics on households and families in 1947 and 1948, as shown in Table 11 are derived from the data collected in conjunction with the 2 p.c. sample survey of the labour force for June, 1947 and 1948. It should be noted that the survey covers the total non-institutional civilian population of Canada (exclusive of Yukon and the Northwest Territories), with the exception of a small unsampled population in the northern areas of certain provinces. However, the figures in the table include estimates for the unsampled areas.

*Household Defined.*—A household for purposes of the sample survey is a group of people living together in the same living quarters and sharing the same housekeeping arrangements. It may be a single family, or sometimes a single person or a group of unrelated persons or, perhaps, a family with a lodger or servant making up the household.

*Family Defined.*—For purposes of comparison with the 1941 Census statistics, a family in the sample survey was defined as a group of two or more persons, living in a dwelling, related either as husband or wife, with or without children, or as parent and child. Other relatives living in the same dwelling, including married children, where not counted as members of the family. However, where a married son (or daughter) and family were living in the same dwelling or household as their parents, they were counted as a second family in the dwelling.

### Section 13.—Quinquennial Census of the Prairie Provinces

The Census and Statistics Act of 1905 and the Statistics Act of 1918 (replaced by the Statistics Act, 1948) provide for a census of population and agriculture for the Provinces of Manitoba, Saskatchewan and Alberta, to be taken in 1906 and every tenth year thereafter, in addition to the Dominion Decennial Census.

The latest Prairie Province Census was taken as of June 1, 1946, and a summary of the results available up to March, 1948, covering such general population characteristics as sex, age, marital status, birthplace, citizenship, mother tongue, years of schooling and migration, is presented at pp. 162-171 of the 1948-49 Year Book. Additional analyses, available since that date, are summarized in this edition. More detailed information may be obtained in bulletin form and will later be published in the census volumes.

The populations of the Provinces of Manitoba, Saskatchewan and Alberta as at June 1, 1946, are given in Table 12. The rural and urban classification shows that a definite trend towards urbanization has taken place since 1936. There has

been an actual decline in the rural population of Manitoba and Alberta since 1941, and in that of Saskatchewan since 1936. This movement is partly a development of the Second World War.

### 12.—Rural and Urban Populations of the Prairie Provinces, 1946, compared with Census Years 1906-46

Year	MANITOBA			SASKATCHEWAN			ALBERTA

1916.....	312,846	241,014	553,860	471,538	176,297	647,835	307,693	188,749	496,442
1921.....	348,502	261,616	610,118	538,552	218,958	757,510	365,550	222,904	588,454
1926.....	360,198	278,858	639,056	578,206	242,532	820,738	373,751	233,848	607,599
1931.....	384,170	315,969	700,139	630,880	290,905	921,785	453,097	278,508	731,605
1936.....	400,289	310,927	711,216	651,274	280,273	931,547	486,335	286,447	772,782
1941.....	407,871	321,873	729,744	600,846	295,146	895,992	489,583	306,586	796,169
1946.....	389,592	337,331	726,923	515,928	316,760	832,688	448,934	354,396	803,330

A comparison of Table 13 with corresponding tables based on earlier censuses reveals that the proportion of the population in the older age groups has increased while the proportion in the younger age groups has decreased. This applies to all three provinces as the following percentages indicate. Population under 25 years of age in Manitoba declined from 51.4 p.c. of the total in 1931 to 44.0 p.c. in 1946; in Saskatchewan from 55.3 p.c. to 47.7 p.c.; and in Alberta from 51.7 p.c. to 46.3 p.c. Population 65 years of age or over in Manitoba increased from 4.5 p.c. of the total in 1931 to 7.3 p.c. in 1946; in Saskatchewan from 3.3 p.c. to 6.5 p.c.; and in Alberta from 3.5 p.c. to 6.3 p.c.

100 years or over.....	11	8	19	6	2	8	2	3	5
Totals.....	372,935	353,988	726,923	442,167	390,521	832,688	423,997	379,333	803,330

**Gainfully Occupied Population, 1931-46.**—The number of gainfully occupied males, 14 years of age or over, in the Prairie Provinces, declined from 799,433 in 1931 to 749,395 in 1946, or by 6.3 p.c. The latter figure, however, omitted about 9,000 gainfully occupied Indians on reserves, so that the actual decline would be somewhat less. The drop in the gainfully occupied males is all the more significant when it is considered that the total male population declined by only 2.3 p.c. while the male population 14 years of age or over increased by 2.9 p.c. during the period. Thus not only has the number of gainfully occupied males in the Prairie Provinces declined but the trend in the ratio of gainfully occupied males to the male population 14 years of age or over has also been downward. The more important factors contributing to this trend include the changing age structure of the population, earlier retirement of gainful workers and the later entry of young persons into gainful employment.

The number of gainfully occupied females, on the other hand, increased from 115,801 in 1931 to 143,474 in 1946, or by 23.9 p.c. The total female population increased by 3.5 p.c. since 1931 while the females, 14 years of age or over, increased by 13.3 p.c.

**14.—Gainfully Occupied, 14 Years of Age or Over, for the Prairie Provinces, by Sex, Census Years 1931-46**

<sup>1</sup> Exclusive of gainfully occupied Indians on reserves.

**Economic Status of the Population 14 Years of Age or Over, 1946.**—Table 15 classifies the population 14 years of age or over as gainfully occupied or not gainfully occupied (exclusive of Indians on reserves). The "gainfully occupied", or economically active category represents persons contributing directly to the production of goods and services at the time of the census. The "not gainfully occupied", or economically inactive population, includes a variety of classes of which homemakers formed the largest group. Young persons 14 to 24 years of age constituted only 0.3 and 0.5 p.c. of the male and female populations 14 years of age or over, respectively, persons 14 years of age or over with no occupation and not seeking employment accounted for 0.4 and 6.4 p.c., retired persons for 6.4 and 0.2 p.c., students for 9.3 and 9.6 p.c., and inmates of institutions for 1.2 and 0.8 p.c. of the respective male and female populations in this age group. The 12,285 male and 11,157 female Indians, 14 years of age or over, living on reserves are shown separately.

<sup>1</sup> Persons retired from gainful occupations and admitted to institutions are included in the class "Inmates of institutions".

<sup>2</sup> Includes young persons in institutions attending school.

<sup>3</sup> See footnotes 1 and 2.

<sup>4</sup> Includes all Indians, 14 years of age or over, living on reserves.

**Occupations, 1946.**—Table 16, which classifies the gainfully occupied according to occupation groups and sex, shows that 47.9 p.c. of the total gainfully occupied males in the Prairie Provinces were engaged in agricultural occupations, 8.2 p.c. were in manufacturing and mechanical occupations, 6.5 p.c. in proprietary and managerial occupations, 6.2 p.c. in protective (including Armed Forces) services, and 6.2 p.c. in transportation.

<sup>1</sup> Includes electric light and power production and stationary enginemn.

<sup>2</sup> Exclusive of professional service.

<sup>3</sup> Labourers in all industries except agriculture, fishing, logging, and mining are included in this group.

**Earnings and Employment of Wage-Earners, 1946.**—At the 1946 Census 48·3 p.c. of the total gainfully occupied males were reported as wage-earners, i.e., as working on a wage, salary, commission, or piece-rate basis. The average earnings per week of employment at \$31·16 in Manitoba, \$27·64 in Saskatchewan, and \$31·33 in Alberta, were between 23 and 29 p.c. higher than the average earnings per week of employment reported at the 1941 Census.

Female wage-earners accounted for 82·9 p.c. of the total gainfully occupied females in the Prairie Provinces at the time of the 1946 Census. Average earnings per week of employment at \$18·25 in Manitoba, \$17·57 in Saskatchewan, and \$18·79 in Alberta, were also higher than those reported in 1941 by 37 to 45 p.c.

**17.—Wage-Earners in the Prairie Provinces, 14 Years of Age or Over, together with Average Earnings, Weeks Employed, and Earnings per Week Employed in the 12 Months Prior to June 1, 1946, also Average Family Earnings.**

Province	Average Earnings		Average Weeks Employed		Average Earnings per Week Employed		Total Wage-Earners		Wage-Earner Families

Alberta.....	1,422	830	45·39	44·18	31·33	18·79	126,519	37,686	1,688	1,879
<b>Prairie Provinces</b>	<b>1,352</b>	<b>809</b>	<b>45·64</b>	<b>44·43</b>	<b>30·28</b>	<b>18·21</b>	<b>362,189</b>	<b>118,991</b>	<b>1,664</b>	<b>1,873</b>

**Unemployment on May 31, 1946.**—In view of the high level of employment at the time of the 1946 Census, only 19,469 male and 3,141 female wage-earners were reported as having “no job” and another 2,288 males and 542 females as being on “lay-off” on May 31, 1946, in the three Prairie Provinces. Thus only 6·0 p.c. of the male and 3·1 p.c. of the female wage-earners were unemployed.

**Dwellings, Households, and Families.**—During the period 1936-46 the number of households in the Prairie Provinces increased by 6·2 p.c. and the number of families by 11·5 p.c. At the same time the total population of the Prairie Provinces increased by only 1·8 p.c. reflecting a reduction in the average size of households from 4·3 in 1936 to 3·9 in 1946, and a reduction in the average size of families from 4·2 in 1936 to 3·8 in 1946.

*Definitions of Dwelling, Household, and Family at the Quinquennial Census.*—A “dwelling” is a structurally separate set of self-contained living premises having its own entrance from outside the building containing it or from a common passage or stairway inside. A “household” refers to all the persons living in one dwelling

unit, irrespective of whether or not they are related to each other by ties of kinship. A "family", on the other hand, consists of husband and wife (with or without children) or a parent with an unmarried child (or children) living together within the same household.

## Section 14.—Population Statistics for Newfoundland

As stated on p. 148, the following demographic statistics of Newfoundland are introduced into this edition of the Year Book to provide authentic background material for economic studies of the new province. The latest Newfoundland Census, that of 1945, took place before union and therefore, until the next Federal census is taken in 1951, population data for Newfoundland cannot be combined with data for other provinces.

The population of Newfoundland including Labrador, in 1945, was 321,819, mostly the descendants of settlers from southern England and Ireland. The population is unevenly distributed, nearly one-half living on the Avalon Peninsula in the eastern part of the Island. St. John's, the capital and Newfoundland's only city, is a trading and commercial centre of about 45,000 persons within the municipality, or 57,000 persons in greater St. John's. Apart from St. John's, there are 25 places having a population in excess of 1,000, principal among these being Corner Brook on the west coast, Bell Island and Carbonear on the Avalon Peninsula and Grand Falls, Windsor, Botwood and Bishop's Falls in the interior. The remainder of the population is distributed among more than 1,300 small settlements spread over 6,000 miles of coast line.

In Tables 23 to 31 additional information on the total population of Newfoundland by sex, age, marital status, racial origin and religion, will be found. Since 98 p.c. of the population is native-born, tables on birthplaces and country of birth of aliens are not included. Tables 30 and 31 contain statistics on the occupations of the gainfully employed population, and dwellings and families.

1911.....	242,619	45,582	5.3	49,178	..
1921.....	263,033	48,892	5.4	53,848	4.9
1935.....	289,588	54,198	5.3	60,569	4.7
1945.....	321,819	62,418 <sup>1</sup>	5.2	68,000	4.4

<sup>1</sup> Includes hotel and institutional dwellings.

### PART III.—STATISTICS OF WORLD POPULATION

Statistics of world population, not obtainable during the war years, have again become available through the Statistical Office of the United Nations. The following data were published in the United Nations Statistical Series A, No. 5, May, 1949. Countries are listed in alphabetical order within continents, distinguishing between dependent and independent areas. This arrangement has no legal or political significance.

#### 32.—Population for each Country or Area of the World, according to the Latest Census and Latest Official Estimate

NOTE.—Areas for which no figures are available are not listed.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

## Section 1.—Immigration

The history of immigration to Canada is given briefly at pp. 172-173 of the 1948-49 Year Book.

**The Immigration Act and Regulations.**—Immigration to Canada is controlled by the terms of the Immigration Act and by the Regulations and Orders made under authority of the provisions of that Act. The Act itself is purposely flexible and does not define the classes or categories of persons who are admissible to Canada as immigrants. Such definitions are given in Regulations made under the Act by Order in Council. On the other hand, the Act does define certain prohibited classes, including persons suffering from some forms of mental or physical ailments, criminals, advocates of the use of force or violence against organized government, spies, illiterates and others. Persons within these prohibited classes cannot be admitted to Canada as immigrants except by Act of Parliament.

Under the Immigration Act and Regulations as they stand to-day, the categories of persons admissible to Canada as immigrants may be readily summarized.

The first and most-favoured group includes British subjects from the United Kingdom of Great Britain and Northern Ireland, New Zealand, Australia and South Africa; citizens of Ireland; citizens of the United States; and French citizens born in France and entering Canada directly from that country. Such persons are admissible if they can satisfy the immigration officers at the port of entry that they are in good physical and mental health; they are of good character; and they are not likely to become a public charge. The legal barriers against the admission of these favoured groups have been lowered as far as it is safe for any country to go in dealing with prospective residents.

The second general category of admissible persons consists of close relatives of Canadian citizens or of persons legally admitted to and domiciled in Canada. The relationships covered by this regulation are:—

- (1) Husband or wife;
- (2) Father or mother;
- (3) Son, daughter, brother or sister together with husband or wife and unmarried children;
- (4) Orphan nephews or nieces under 21 years of age (the term "orphan" used here means a child bereaved of both parents);
- (5) A prospective husband or wife entering Canada to marry a legal resident; provided that in either case the intended husband is able to support his intended wife.

\* Revised under the direction of A. L. Jolliffe, Director of Immigration, Department of Mines and Resources.

The third category of admissible persons is comprised of those citizens of non-Asiatic countries who are coming to Canada as agriculturists and who have sufficient means and the intention to farm in Canada, either by themselves or with the assistance of relatives; farm labourers coming to engage in assured farm employment; and miners and woods workers coming to assured employment in the mining or forest industries.

In 1949 the only persons of Asiatic racial origin who are admissible to Canada are the wives, and unmarried children under 18 years of age, of Canadian citizens.

**Administration.**—The administration of the Immigration Act and Regulations is the function of the Immigration Branch of the Department of Mines and Resources.

The Immigration Branch is composed of two units. The Canadian Service maintains staffs at each of the 269 ports of entry along the Canada-United States Border and on the Atlantic and Pacific seaboards where the admissibility is established of every person who legally enters Canada. Inland offices are also located at strategic points across the country where investigation of applications for the admission of immigrants by Canadian residents is conducted.

The Overseas Service maintains four offices in the United Kingdom and one in Ireland. In the United Kingdom, Canadian medical officers located at London, Glasgow and Liverpool and a roster of over 500 approved British doctors carry out the medical examinations of intending immigrants. In Commonwealth countries in which immigration offices have not been established, intending immigrants are dealt with by officials in the chanceries of the Canadian High Commissioners. A number of offices are also located on the Continent of Europe and facilities for the examination of immigrants are available at all Canadian diplomatic and consular offices throughout the world. This system provides for the preliminary examination of immigrants before they leave their homelands.

An X-ray examination of the chest is required for all immigrants from countries where the incidence of tuberculosis per capita is higher than it is in Canada. This excluded only citizens of the United States and New Zealand in 1949.

A primary objective of administration is to assist immigrants to become quickly and satisfactorily settled in the Canadian community. In the case of group movements the Canadian Government and the International Refugee Organization both assist in preparing the immigrant for his new life in Canada prior to arrival. Upon arrival these immigrants are taken to the localities in which employment or settlement has been arranged for them and from this point they, and of course all those who come in on their own, become primarily the responsibility of the provincial rather than the Federal authorities. However, through the work of the Settlement Service of the Immigration Branch, the National Employment Service of the Department of Labour and the Citizenship Branch of the Department of the Secretary of State, the Federal Government continues its interest in them. Liaison is maintained between the Federal Government and the provincial authorities and private organizations by the Citizenship Branch with a view to co-ordinating the efforts in this field, filling gaps and eliminating duplication.

Literature, dealing with such matters as basic English, Canadian Government, the acquisition of citizenship, and so on, is made available and in certain parts of the country special plans have been initiated for training teachers in citizenship classes so that they will be competent to handle immigrant instruction.

**Canadian Immigration Policy as at June, 1949.**—The policy in relation to immigration is to ensure the careful selection and permanent settlement in Canada of such numbers of immigrants as can be absorbed advantageously in the national economy. The figure that represents absorptive capacity will clearly vary from year to year in response to economic conditions. In the past Canada has received many millions of immigrants but at the same time has lost substantial numbers to the United States—a large proportion of whom were young people born in Canada and others who had benefited by education or training received in Canada.

As a result of present policy total immigration to Canada, which sank to less than 11,300 for a single year during the depression (1935) and to less than 7,600 for one year (1942) during the War, has increased since the end of hostilities to 71,719 for 1946, 64,127 for 1947, and 125,414 for 1948. Figures for the first six months of 1949 will possibly reach a total of 50,000.

Since the conclusion of the Second World War in 1945 special steps have been taken to broaden the categories of special groups of immigrants. Individuals in such groups are selected carefully on the basis of their suitability to Canadian conditions. The following paragraphs deal with the main groups under their respective headings.

*Displaced Persons.*—By successive Orders in Council, permission has been granted for the admission of 40,000 displaced persons who would otherwise have been inadmissible. This figure does not include displaced persons who are admissible as relatives of persons already resident in Canada, nor does it include the dependents of displaced persons who, after becoming settled in this country, may then apply for the admission of their relatives. It is quite possible that when the total number of admissible relatives and dependents is added to the 40,000, this country's contribution to the settlement problem will involve an eventual movement of over 100,000 displaced persons.

Canada has the distinction of being not only the first non-European country to take positive action toward the solution of the displaced persons problem but of having admitted, up to Mar. 31, 1949, more persons in this category than all other non-European countries put together. The total number of displaced persons entering Canada up to that date was 64,860.

Steps were taken to ensure that those admitted were types that would be useful in the Canadian economy and would make good Canadian citizens. The Government's decision, while based in part on altruistic motives, was based also on the determination that the movement of displaced persons should constitute a real contribution toward the development of Canada. The machinery set up to carry out this policy includes an Immigration-Labour Committee (on which the Departments of Mines and Resources, Labour, External Affairs and National Health and Welfare are represented) which has the responsibility of assessing labour requirements in Canada and of defining the types of displaced persons that should be admitted to meet established needs. Applications for labour from industry are examined by this Committee with a view to ensuring: (1) that the employer or employers concerned are in a position to give at least one year's employment to any D.P.'s that may be brought in; (2) that they are prepared to pay the prevailing wage rate for the type of labour concerned; (3) that they are able to provide housing for the D.P.'s on arrival.

The Canadian Christian Council for Resettlement of Refugees assists in the movement to Canada of certain classes of displaced persons. The Council was formed in June, 1947, to aid in locating and processing overseas approved immigrants

who are displaced persons in occupied territory but who do not come within the mandate of the International Refugee Organization. It is a voluntary organization consisting of the following members: the Catholic Immigrant Aid Society, the Canadian Mennonite Board of Colonization, the German Baptist Colonization and Immigration Society, the Canadian Lutheran World Relief, the Sudeten Committee and the Latvian Relief Fund of Canada. The work of the council is handled in exactly the same manner as for approved immigrants coming within the mandate of the International Refugee Organization and almost all the immigrants concerned are close relatives of residents of Canada.

The racial distribution of displaced persons admitted up to Mar. 31, 1949, was:—

Polish.....	14,620	Roumanian.....	537
Ruthenian.....	13,598	Czech.....	449
Hebrew.....	8,479	Slovak.....	116

Russian.....	1,576	Swedish.....	10
Serbian.....	986	Other.....	37
Magyar.....	983		
Croatian.....	547		
		TOTAL.....	64,860

*Netherlands Farm Families.*—Arrangements were made with the Netherlands authorities whereby Dutch agriculturists whose lands were flooded as a result of military operations during the Second World War might come to settle in Canada. These immigrants, who are not farm labourers but farm settlers with financial resources, migrate in family groups and those who have come have proven eminently successful in adapting themselves to Canadian agricultural methods. The movement involved about 11,000 persons between June, 1947 and Mar. 31, 1949.

*Polish Ex-Service Men.*—Under a special plan, authority was granted for the admission of Polish ex-service men to assist farmers in urgent need of help. These Poles agreed to remain in agricultural employment for a period of two years. Their employers, in turn, agreed to provide employment at prevailing rates of pay and to supply living accommodation. Under this plan, 4,327 men were brought to Canada up to Mar. 31, 1949.

*Immigrants from Malta.*—By arrangement with the Government of Malta, Canada authorized the admission of 500 Maltese with their dependents. The placement of the heads of families in Canada is to be arranged by the Department of Labour and the dependents will join the heads of families when they are in a position to receive and care for them.

*European Orphans.*—At the request of the Catholic Immigrant Aid Society and the Canadian Jewish Congress, the Canadian Government authorized the admission of 1,000 Catholic and 1,200 Jewish war orphans.

### Subsection 1.—Immigration Statistics

Table 1 presents statistics of immigration to Canada from 1910 to 1948. For more recent years analyses, including place of last permanent residence, port of arrival, sex, age, birthplace, racial origin, nationality, destination and occupation, will be found in Tables 2 to 9. Tables 12 and 13 deal with Canadians returning from the United States and Newfoundland and Table 14 shows oriental immigration.

1917.....	72,910	1925....	84,907	1933.....	14,382	1941.....	9,329		

At this place, in previous editions of the Year Book, figures purporting to show immigrant arrivals from the United Kingdom, the United States and other countries, have been given. The series went back to 1881 but, unfortunately, has latterly been shown to be unsound. The newer series, given below, showing immigrant admissions by place of last permanent residence goes back only to 1939.

<b>Totals.....</b>	<b>2,729</b>	<b>57,531</b>	<b>17,739</b>	<b>36,948</b>	<b>16,742</b>	<b>101,291</b>

<sup>1</sup> Other than Boston, Ellis Island and Philadelphia.

<sup>2</sup> Includes Charlottetown, P.E.I., Windsor, N.S., Dalhousie, N.S., Yarmouth, N.S.; Bathurst, N.B., Chatham, N.B.; Point du Chene, Que., Rimouski, Que., Boucherville, Que.; Uplands, Ont., and Alberni, B.C.

**Sex, Age and Marital Status.**—Of the total immigrants 18 years of age or over entering Canada in 1948, 54.0 p.c. were males and 46.0 p.c. females. These percentages compare with 52.4 and 47.6, respectively, for 1947. Previous to that year, adult female immigrants outnumbered adult male immigrants almost consistently since 1931, particularly in 1945 and 1946 when the wives of Canadian service men were coming in. Before 1931 males normally exceeded females. In 1948 adult male arrivals showed an increase of 25,705 or 9.4 p.c. over 1947, and adult female arrivals an increase of 20,404 or 8.2 p.c.

Throughout the years, the male and female distribution of persons under 18 years of age has been fairly even. In 1948, of the 27,237 immigrants in this class, 84.7 p.c. were under 15 years as compared with 83.5 p.c. of the 12,059 such immigrants in 1947.

Of the total male immigrants in 1948, 38.5 p.c. were married and 59.3 p.c. single; the percentages for female immigrants were 42.2 and 48.9, respectively.

#### 4.—Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, 1939-48

NOTE.—Figures for the years 1930-38 will be found at p. 183 of the 1946 Year Book.

**Birthplaces.**—While the number of British-born immigrants to Canada in 1948 showed an increase over 1947, they accounted for a much smaller proportion of the total, being only 39.5 p.c. as compared with 64.6 p.c. in the previous year. A tremendous increase was shown in the number of immigrants born in Continental European countries, which as a whole accounted for 55.5 p.c. of the total in 1948 compared with 23.4 p.c. in 1947. In 1948, 39.9 p.c. of the European-born immigrants were born in Poland, 18.8 p.c. in the Union of Soviet Socialist Republics, Yugoslavia and Lithuania, 10.0 p.c. in the Netherlands and 4.6 p.c. in Italy. The number of immigrants born in the United States declined in 1947 and again in 1948, accounting for, in the latter year, only 4.4 p.c. of the total.

#### 6.—Birthplaces of Immigrant Arrivals, 1946-48

NOTE.—Figures for 1942-45 are given at p. 178 of the 1948-49 Year Book.

<sup>1</sup> Includes 10 born at sea; 60, in Egypt; and 71, in Palestine.

**Racial Origins.**—In 1948, 40.0 p.c. of the immigrant arrivals in Canada were of British stock; 64.7 p.c. of these were English, 23.1 p.c. Scottish, 10.2 p.c. Irish and 2.0 p.c. Welsh. Of the 74,808 immigrants of Continental European stocks, which accounted for 59.6 p.c. of the total, 13,915 were Polish, 10,417 Netherland, 10,041 Ruthenian, 9,892 Jewish and 4,351 Lithuanian. Each of these stocks, as well as almost all other European stocks, showed a substantial increase in 1948 over 1947.

### 7.—Racial Origins of Immigrant Arrivals, 1946-48

NOTE.—Figures for 1926-45 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

<sup>1</sup> Reported as "Swiss" origin but are evidently one of the constituent races such as German, French, Italian, etc.

**Nationalities.**—The nationality of 39.6 p.c. of the total immigrants in 1948 was British, as compared with 64.9 p.c. in 1947. In the later year, 24.4 p.c. of the immigrants owed allegiance to Poland, 5.6 p.c. to the Netherlands, 5.3 p.c. to the United States, 4.0 p.c. to the Union of Soviet Socialist Republics and 3.6 p.c. to Lithuania.

#### 8.—Nationalities of Immigrant Arrivals, 1946-48

**Intended Destination and Occupation.**—Past experience has shown that not all immigrants reach the province of intended destination or follow intended occupations. Table 9 gives the intended destination as given by the immigrant for those entering in 1948. Of the total immigrants, 39.3 p.c. were dependent wives and children, 15.8 p.c. were classed as farm workers, 12.2 p.c. as skilled workers and 13.1 p.c. as unskilled workers, while 7.9 p.c. were in the clerical, professional and merchant classes.

Of the total female immigrants, aside from dependent wives and children who accounted for 60.9 p.c., the largest number in any one class were listed as domestic servants, followed by clerical workers. Only 8.3 p.c. were classed as skilled workers.

<sup>1</sup> Includes the following classes for which totals only are given here: blacksmiths, 87; bookbinders, 20; engravers, 14; hat and cap workers, 24; jewellers, goldsmiths and silversmiths, 26; millers, 32; milliners, 22; patternmakers, 18; stonecutters, 6; tanners, 13; upholsterers, 73; watch and clockmakers, 51; boilermakers, 49; ironworkers, 15; moulders, 61; fishermen, 72; and not stated, 982.

**Rejections and Deportations.**—The Immigration Act provides for the rejection and deportation of immigrants belonging to prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry. The results of the operation of these regulations are shown in Tables 10 and 11, which give the numbers of immigrants rejected on arrival and those deported after admission, the causes of such rejections or deportations, and the nationalities of those deported for the years 1939-48.

### Subsection 3.—Juvenile Immigration

Juvenile immigration, apart from children accompanying their parents, has not been a large factor since 1931, when the Federal Government ceased to grant financial assistance for this particular form of immigration. There were 33 juvenile immigrants in 1941, 23 in 1942, 28 in 1946, 6 in 1947 and 28 in 1948. An outline of juvenile immigration, including those children brought to Canada under the British Empire Settlement Agreement, is given at p. 121 of the 1941 Year Book.

### Subsection 4.—Oriental Immigration

Under wartime conditions, Oriental immigration ceased to be a problem and the economic effect of the presence of persons of Oriental origin can best be studied from census figures. The Chinese Immigration Act was repealed on May 14, 1947. Chinese immigration has been controlled under the Immigration Act subsequent to that date. Under the present regulations, the only persons of Asiatic racial origin who are admissible to Canada are the wives and minor children of Canadian citizens.

### 14.—Oriental Immigrants, 1927-48

NOTE.—Figures for 1906-26 are given at p. 183 of the 1948-49 Year Book.

### Section 2.—Emigration

Emigration from Canada is an important factor tending to offset the immigration activities of the past and has attained considerable proportions at certain periods. The two main factors have been the migration to the United States of Europeans originally immigrating to Canada and the emigration of native-born Canadians.

A question of considerable interest to Canadians is that of the permanent movement of population between Canada and the United States. In view of the lack of Canadian statistics on emigration, Table 15 has been compiled from figures supplied by the Immigration and Naturalization Service of the United States Department of Justice. Not all the statistics are available by months, so that it has not been possible to present the figures on a calendar-year basis; they are, therefore, shown on that of the United States fiscal year, July 1-June 30. The column headed "Deportable Aliens Destined to Canada" covers persons permitted to return to Canada in lieu of deportation proceedings.

### 15.—Presumed Permanent Movement of Population between Canada and the United States, Years Ended June 30, 1939-48

NOTE.—Figures for 1933-34 are given at p. 168 of the 1942 Year Book and for 1935-38 at p. 184 of the 1948-49 edition.

## Section 1.—Historical Sketch of the Collection of Vital Statistics in Canada

The history of the collection of vital statistics in Canada is covered broadly at pp. 185-188 in the 1948-49 edition of the Year Book.

A review is given below of the collection of vital statistics in Newfoundland prior to union with Canada which is presented as a background for the statistics appearing separately in Section 9 of this Chapter.

**Classification of Vital Statistics.**—Until recently, vital statistics in Canada were all classified by place of occurrence. In 1944, however, the classification of births and deaths by residence was begun, births being classified by the residence of the mother. A number of special tabulations by residence have been made for a few years prior to 1944: in Tables 1 to 4 and in Tables 9, 10, 11, 21 and 22 the figures are shown for the five-year average 1941-45. Marriages are classified by place of occurrence and in this case comparable averages can be carried back to 1926.

**Vital Statistics of Newfoundland Prior to Union.**—The collection of vital statistics in Newfoundland has been a history of struggle against continual difficulties. The scattered distribution of isolated settlements along the coastline, where in many places there is not even to-day any regular system of communication or transportation, results each year in long delays in the collection of data. Economic and geographic factors have prevented any effective growth of municipal or local government organization compelling all reporting activity to be organized and administered directly from St. John's City. In recent years, however, doctors have been located at strategic points throughout the Island, but many births and illnesses are still unattended by the medical profession. The small population and low per capita income has resulted in an individual approach being made to most problems. Except for the birth and marriage data statistical information was required, principally, for the issue of passports. The incompleteness of existing vital statistics is also a result of the disastrous fire of 1892 which practically destroyed the city of St. John's with registrar and church records.†

\* Revised in the Health and Welfare Division, Vital Statistics Section, Dominion Bureau of Statistics.

† The building up of vital statistic material in 1949 assumed a role of greatly increased importance with the coming into force in the Province of Newfoundland of Family Allowances and the joint Federal-Provincial Old Age Pension Act—both measures have added enormously to the duties of the office of the Registrar General of the Province.

Authority for the collection and analysis of vital statistics in Newfoundland is contained in "An Act to provide for Registration, Births, Marriages, and Deaths", passed in 1890, which now forms Chapter 19 of the Consolidated Statutes of Newfoundland (third series). The Act remained in abeyance until May 1, 1891, when it came into force. Prior to this Act, the law of England was applicable to the reporting of vital statistics.

The Act requires that all births, marriages and deaths in Newfoundland be registered in a public register to be kept in St. John's City and provides for the appointment of a Registrar General. Every clergyman or other person baptizing, celebrating marriage or performing funeral services is made a "Registering Officer" and is required to keep a register of the names and dates of birth of all persons baptized, and of all marriages and deaths at which he officiates. This information is to be reported quarterly (monthly in St. John's) to the Registrar General.

In the case of death the same provisions apply to the medical attendant or undertaker and failing these to the next of kin. In St. John's a death certificate, a copy of which is sent to the Registrar General, is required before a body can be accepted for burial but it has not always been possible to carry out this procedure in all parts of Newfoundland.

## Section 2.—Summary of Vital Statistics

Tables 1 to 5 give a summary of the vital statistics of Canada and the provinces for the years 1941 to 1947.

In comparing the birth, death and marriage rates of the provinces, it is useful to bear in mind that part of the differences observed may be due to differences in the sex and age distribution of their populations. Similarly, changes in these rates may be due partly to changes in this distribution. These remarks also apply to international comparisons of birth, death and marriage rates. Over the past 15 years, the death rate in British Columbia has been rising, while in Ontario it has been more or less stable, with the result that, though 15 years ago the death rate in Ontario was considerably higher than in British Columbia, at present their rates are about equal. This does not mean, however, that the mortality rates at each age have risen in British Columbia. On the contrary, they have been falling. The death rate for the population as a whole has been rising because the increasing proportion of population in the higher age groups has more than outweighed the fall in the mortality rates at each age.

**Canadian Life Tables.**—Life tables have been calculated on the basis of the population of 1941 and the deaths of 1940-42. These are the second official life tables for Canada to be published, the first having been calculated on the basis of the deaths of 1930-32 and the population of 1931. The life table for 1941 is given in abbreviated form in Table 6.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the period 1940-42, of 100,000 males born, 6,250 died in their first year, so that 93,750 survived to one year of age; 676 died in their second year, so that 93,074 survived to two years of age; and so on. At 100 years of age, only 50 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

Mortality rates for males are higher at all ages than for females, particularly in infancy. Infant mortality in 1940-42 was 62 per 1,000 live births for males compared to 49 per 1,000 for females. Because infant mortality is still so high, the expectation of life at birth is less for both sexes than at age 1. Males who have survived their first year have an expectation of life of 66 years and females of 69 years. The expectation of life of a boy at age 15 is 54 years, and of a girl 56 years. At age 25, it is 45 years for men and 47 for women. At age 70, when people become eligible for old age pensions, it is 10 years for men and 11 years for women. In 1930-32 mortality rates for females from 25 to 40 years of age were higher than those for males. In 1940-42, however, because of the reduction in maternal mortality, this was not so.

## Section 3.—Births

**International Comparisons.**—A comparison of the birth rates in Canada and the provinces with those in other countries is shown in Table 7.

**7.—Birth Rates per 1,000 Population of various Countries of the World compared with Canada and the Provinces, for recent years**

In Canada, in 1921, the birth rate was 29.4 per 1,000. Since a rate of 35 per 1,000 is very high for countries of modern western civilization, the Canadian birth rate had probably not fallen far or for long before then. It fell continuously until 1937, when it was 20.0 per 1,000 but since then, owing to economic recovery and the War, it rose to 21.5 in 1940, to 24.0 in 1943 and to 28.6 in 1947. The birth rate in the provinces followed the same general trend, though in the Maritimes the fall stopped before 1930.

**Sex of Live Births.**—Wherever birth statistics have been collected, they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-47 varied between 1,067 and 1,051.

Hospitalization and medical attendance at birth have increased in Canada. In 1926-30, only 22 p.c. of live births occurred in hospitals, while in 1940-42 the proportion was 49.5 and in 1947, 71 p.c. The provinces still differ greatly in this respect. In 1947 the proportions of births that occurred in hospitals were: Quebec 39 p.c., New Brunswick 59 p.c., Prince Edward Island 72 p.c., Nova Scotia 79 p.c., Ontario 87 p.c., Manitoba 88 p.c., Saskatchewan 90 p.c., Alberta 94 p.c., and British Columbia 96 p.c.

**Illegitimacy.**—Less than 5 p.c. of live births in Canada are illegitimate. This percentage is comparatively low. The percentage in the five-year period 1926-30 was 3.01 and in 1941-45 it was 4.17. The apparent increase is partly due to the more complete registration of illegitimate births, brought about by the co-operation of provincial registration officials and social welfare agencies and by their more sensible and sympathetic treatment of illegitimacy.

**Stillbirths.**—Table 11 shows the number of stillbirths in Canada and the provinces, together with the rates per 1,000 live births. The rate of stillbirths has been falling since 1926, though not equally in all provinces. The rate of illegitimate stillbirths per 1,000 illegitimate live births is considerably higher than the rate of legitimate stillbirths, and consequently higher than the over-all rate.

**Multiple Births.**—Approximately one confinement in 85 in Canada results in the birth of more than one child. In the period 1926-47 there have been 65,511 such confinements, of which 64,909 were twins and 595 were triplets. There have been six sets of quadruplets. The Dionne quintuplets were born in 1934.

The proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between three and five times as high for triplets.

**Fertility Rates.**—The sex and age distribution of the population is an important factor in determining birth, death and marriage rates. Since more than 95 p.c. of children are born to women between the ages of 15 and 50, differences in the proportion of women of these ages to the population as a whole will cause differences in the birth rates of different countries or regions, even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have, therefore, been devised. The best known of these are age-specific fertility rates and reproduction rates.

Further details on this subject may be found at pp. 153-154 of the 1947 edition of the Year Book or from the report "Gross and Net Reproduction Rates, Canada and the Provinces", published by the Dominion Bureau of Statistics, Ottawa.

**Ages of Parents.**—The numerical and percentage distribution of legitimate live births by the ages of the parents is given in Table 13, of illegitimate live births by the age of the mother in Table 14, and of stillbirths by the age of the mother in Table 15. The average ages of the parents are also given.

In 1930-32 the average age of fathers was 33.7 years and of mothers 29.3 years. The average age of parents is now slightly lower. Besides the fertility rates at each age, two other factors help to determine the average age of parents having children; first, the average age of potential parents, that is, of the population between the

ages of 15 and 50 and secondly, the proportions of first and second births to the total. The average age of men between 15 and 50 was 30·9 years in 1931 and 30·7 in 1941; the average age of women was 30·4 in 1931 and again 30·4 in 1941. The changes are thus very small. Other things being equal, a high proportion of first and second births will result in a lower average age of parents. In 1930-32 first and second births were 43 p.c. of the total births. In 1945-47 first and second births together were 58 p.c. of the total. These changes are very great and account for the lower average age of parents.

A number of other facts are shown in Tables 13, 14 and 15. In the first place, the average age of fathers of legitimate children is about four years greater than the average age of mothers. Secondly, the average age of mothers of illegitimate children is about five years less than the average age of mothers of legitimate children; in 1930-32 the difference was six years. The fact that over two-thirds of illegitimate children are born to mothers under 25 years of age accounts for this difference. Thirdly, the average age of mothers of stillborn children is higher than that of live born. Table 15 shows that the rate of stillbirths per 1,000 live births increases with age of the mother. It is more than twice as high among mothers of 40-44 years as it is among mothers of 20-24, and over three times as high among mothers of 45-49.

<sup>2</sup> These figures or percentages are of the children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose parents were born in different countries.

**Origin of Parents.**—Table 19 shows the numbers and percentages of children born to parents of the principal racial or ethnic groups in Canada. A person's origin is usually traced through the father. For example, if the father is English and the mother French, the person's origin is said to be English. Illegitimate children, however, are usually classified by the origin of their mother, since the origin of the father is seldom known.

Table 19 shows that about 60 p.c. of Canadian children are born to parents who are of the same origin; 40 p.c. are born to parents of different origins. A certain amount of this inter-mixture has no doubt been going on for many years.

## Section 4.—Deaths

Except for wars and their after-effects — military and civilian deaths in the First and Second World Wars must be counted in tens of millions — impressive declines in the death rate have been recorded during the past century in many countries of the world.

## Subsection 1.—General Mortality

**International Comparisons.**—A comparison of the death rates in Canada and the provinces with those of other countries is shown in Table 20.

**20.—Death Rates per 1,000 Population of various Countries of the World compared with Canada and the Provinces for recent years**

**Canadian Mortality.**—Since 1931, the Canadian death rate has fluctuated between 10.3 and 9.4 per 1,000. It has been more or less stable in Ontario, has been falling in the Maritimes and Quebec and has been rising slightly in the Prairie Provinces and British Columbia. The low death rates in the Prairie Provinces are partly due to their younger average population. The slow rise in the death rates of these provinces in the last few years is due to the increasing proportion of people in the older age groups.

Throughout Table 21, with one exception (Prince Edward Island death rates of 1945) the death rates are higher for males than for females.

**Deaths in Urban Centres.**—In Table 22 deaths are classified by place of residence. The death rates in urban centres vary only slightly from the death rates of their respective provinces. However, due to the influx of young people from the rural areas, the age distribution of the population in urban centres is often more favourable to a low death rate than that of the province as a whole.

**Sex and Age Distribution of Deaths.**—Despite reductions in infant mortality, more deaths still occur in the first year of life than in any other year. The number of children who die under five years of age has been reduced from an average of 25,174 in 1930-32 to 17,949 in 1940-42. In 1947, owing to the exceptionally large number of births—9 p.c. over 1946—the number rose slightly to 18,947.

The percentage distribution of deaths has changed greatly since 1930-32. The percentages of deaths at all ages up to 50 years have declined, and the percentages at ages over 50 have increased. The average age at death has gradually risen. The reduction in mortality rates in the early and middle years of life increases the number of people in the older age groups and raises the average age of the population as a whole. In 1931, 16.6 p.c. of the population was 50 years of age or over and the average age of all males was 29.0 years and of all females 28.1 years. In 1941, 19.7 p.c. of the population was 50 years of age or over, and the average age of all males had risen to 30.7 years and of all females to 30.2 years. Compared with most European countries, however, the population of Canada is still young.

**Causes of Death.**—About 91 p.c. of the deaths in Canada are due to the 28 specified causes given in Table 24. About 80 p.c. are due to ten causes: diseases of the heart, cancer, intracranial lesions, violent deaths, nephritis, diseases of early infancy, pneumonia, tuberculosis, influenza and diseases of the arteries.

The classification of the causes of death is according to the revision of the International List of 1938, that was first used in Canada in 1941. Each revision of the International List makes continuity of classification difficult. This applies especially to diseases of the heart, intracranial lesions (cerebral hæmorrhage) and diseases of the arteries.

The rise in the average age at death has been noted on p. 214. Causes of death that affect children and young adults mainly have declined. Diphtheria, for example, has been almost wiped out. Tuberculosis has been greatly reduced. On the other hand, the ageing of the population increases the proportion of deaths from the causes that affect older people mainly. Thus, cancer, nephritis and diseases of the heart now account for a substantially larger proportion of all deaths than formerly.

### Subsection 2.—Infant Mortality

**International Comparisons.**—New Zealand for many years has had the lowest rate of infant mortality. In 1947 the rate was 25 per 1,000 live births, compared with 68 in 1905, 51 in 1920 and 34 in 1930. Sweden, Iceland and Australia also have very low rates. In England and Wales the rate has been reduced from 128 per 1,000 in 1905 to 60 in 1930 and 42 in 1947. In the United States the rate has been reduced from 162 in 1900 to 47 in 1940 and 32 in 1947. The energy devoted in recent years to reducing infant mortality has resulted in definite improvement in many other countries.

#### 25.—Infant Mortality per 1,000 Live Births in various Countries of the World compared with Canada and the Provinces for recent years

**Canadian Infant Mortality.**—In Canada, the Federal, provincial and municipal health authorities, together with private welfare agencies, have all taken part in the effort, with the result that the figures 1926-47 show a striking improvement. Of the children born in 1942-46, approximately 60,000 lived to their first birthday who would have died at the rate prevailing in the period 1926-30.

Infant mortality of males is 25 to 30 p.c. higher than that of females. It was pointed out earlier that there were between 1,051 and 1,067 males born to every 1,000 females. Because male infant mortality is higher, the excess of males is much less at the end of the first year. For example, in 1940-42, 397,038 male children were born, compared with 374,908 female children, an excess of 22,130 or 5.9 p.c.; 25,024 male children died during their first year compared with 18,646 female children, that is 6,378 more. The excess of males at one year of age is thus 15,752, or 4.4 p.c. By the age of 52, according to the life table, p. 201, the numbers of males and females will have become equal.

Infant mortality figures and rates per 1,000 live births by sex are given for Canada and the provinces in Table 26. The rates vary considerably between the provinces. One of the principal causes of these variations appears to be the different proportions of births which take place in hospitals or under proper medical care. Examples of these differences have been given earlier, see p. 202. Along with increased hospitalization has come better and more wide-spread pre-natal and post-natal care. Other factors, particularly the supervision of water supplies, improved sanitation and the pasteurization of milk also have been important.

26.—Infant Mortality and Rates per 1,000 Live Births, by Sex and by Provinces, 1944-47

**Infant Mortality in Urban Centres.**—Infant mortality rates in individual cities and towns usually vary widely from year to year. Many cities and towns have, however, maintained consistently low rates. Vancouver has a splendid record; Calgary, Toronto and Winnipeg have exceptionally low rates and Montreal has shown steady improvement.

**Infant Mortality by Causes of Death.**—Of the infant deaths that occur in Canada, about 90 p.c. are due to the nine causes and groups of causes specified in Table 28. One cause, premature birth, accounts for over 20 p.c. The rates from nearly all causes are higher for male than for female children; the only exception shown in the table is for communicable diseases in 1944.

### Subsection 3.—Maternal Mortality

As in the case of infant mortality, the number of mothers who die in pregnancy and childbirth has been greatly reduced. Maternal mortality in Canada and the provinces is shown in Table 29. Although the number of births has been much greater in recent years, the number of maternal deaths has been well below a thousand a year. The rate of maternal mortality is now less than 2 per 1,000 live births. The last two columns of the table show that mortality among unmarried mothers is much higher than among married mothers.

**Age at Death.**—Table 30 shows the distribution of maternal deaths by age, together with the average age at death. The latter is slightly more than two years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates are much lower than they used to be, the inequalities between the age groups remain. The rate at 30-34 years is nearly twice as high as the rate at 20-24 years, and above the age of 40 it is over four times as high. The slightly higher rate in the first age group shown in the table, compared with the second, is due to the high proportion of illegitimate children born to young mothers.

**Maternal Deaths by Causes.**—Table 31 shows, by causes, the numbers and rates of maternal deaths per 100,000 live births. Until recently, puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since the introduction of sulpha drugs in 1936, the rates from these two causes have decreased by 50 p.c.

## Section 5.—Communicable Diseases

The national reporting of communicable diseases in Canada was undertaken, in 1933, by the Dominion Bureau of Statistics, at the request of the Federal Department of Pensions and National Health in co-operation with the Provincial Departments of Health. Since then, the Vital Statistics Section of the Bureau has been responsible for the weekly compilation and analysis of communicable diseases except for a short period during 1939-40, when the work was transferred to the Department of Pensions and National Health. The reports of cases of venereal diseases are included in the current analyses and a standard report form is used by all the provinces.

Table 32 shows the number of cases of certain communicable diseases reported to the Dominion Bureau of Statistics by the Provincial Departments of Health in 1947. The reporting of two diseases, dysentery and rubella, is not compulsory in all provinces. The totals for Canada, therefore, should be accepted with caution.

## Section 6.—Natural Increase

In 1926-30 the rate of natural increase in Canada (excess of births over deaths) was 13 per 1,000 population. It fell to 9.7 in 1937. Owing partly to the depression, the birth rate declined more than the death rate. Since then the rate has increased to 12.6 in 1940-42, 14.5 in 1945, 17.5 in 1946 and 19.2 in 1947.

The rates of natural increase in the provinces followed generally the rate for Canada as a whole. In earlier years, Saskatchewan and Quebec had the highest rates. The high rates in all the Prairie Provinces were due partly to their relatively younger populations and consequent very low death rates. In Quebec, on the other hand, the death rate in 1926-30 was high; it has declined steadily since. In 1947, New Brunswick had the highest rate of natural increase in Canada.

Table 33 shows the numbers and rates of natural increase by sex in Canada and the provinces. In almost all cases, the rates are higher for females than for males. The primary reason for this is that the death rates for males is generally higher than for females. Further, in the case of the Western Provinces, the ratio of males to females in the population, upon which the birth rates are based, are relatively higher than the ratio of male to female births—hence the birth rates for males are lower than for females.

In a country with a fairly young population such as Canada, in which immigration has been large, an excess of males is to be expected. The higher rate of natural increase for females is the means by which this excess is gradually reduced. Eventually, there will, no doubt, be an excess of females in the total population as there now is in most European countries.

### 33.—Natural Increase and Rates of Natural Increase, by Sex and by Provinces, 1944-47

**Natural Increase in Urban Centres.**—The classification of births and deaths by place of residence makes it possible to calculate rates of natural increase for urban centres; the figures are given in Table 34. In most of the larger cities the rate is lower than in their respective provinces. Urban population is also increased by the influx of people from the rural areas.

## Section 7.—Marriages and Divorces

### Subsection 1.—Marriages

**International Comparisons.**—Table 35 shows the marriage rates in Canada and the provinces in comparison with those of other countries. Canadian marriage rates are relatively high.

### 35.—Marriage Rates per 1,000 Population of various Countries of the World compared with Canada and the Provinces for recent years

(Sources: Monthly Bulletin of Statistics of the United Nations and other official publications. In certain cases final figures are not available and provisional data are used.)

In modern industrial countries, the marriage rate varies with the level of economic prosperity. Marriage rates fell during the depression years following 1929, but recovered in the later 1930's. In Canada, England and the United States, the number of marriages was exceptionally high in 1940-42. The number decreased in the years 1943 and 1944 but increased in 1945 and 1946. In Canada there were 20 p.c. fewer marriages in 1944 than in 1942. In 1945 there were 7 p.c. more marriages than in 1944 and in 1946 the number was 5.3 p.c. more than in 1942, the previous high year. The number decreased in 1947.

**Numbers and Birthplaces of Bridegrooms and Brides.**—Table 36 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces. Percentages of brides and bridegrooms according to place of birth are also given.

The proportion of brides and bridegrooms born in Canada is increasing. The average in 1941-45 was more than 10 p.c. greater than in 1931-35. In the Western Provinces, over one-third of the marriages solemnized in 1931-35 were between persons born outside Canada. In 1941-45, taking Canada as a whole, approximately 88 p.c. of all bridegrooms and 92 p.c. of all brides were born in Canada. In the Western Provinces the proportions were 76 p.c. and 86 p.c., respectively. The higher proportion of marriages between persons born in Canada was due to the restricted immigration of recent years. In 1946 and 1947 there was a slight increase in the percentages of brides born outside Canada.

**Age and Marital Status of Bridegrooms and Brides.**—The distribution of bridegrooms and brides by age and marital status is shown in Table 37. Over 90 p.c. of the marriages in 1947 were between persons who had not previously been married. The average age at marriage of bachelors is about 27 years and that of spinsters between 24 and 25 years. The average age of widowers and widows at the time of re-marriage is more than 20 years higher than that of bachelors and spinsters, being 50.3 years in 1940-42 and 52.5 in 1947 for widowers and 46.4 and 44.7, respectively, for widows. The age distribution of widowers and widows at the time of re-marriage is, of course, very different from that of bachelors and spinsters.

Widowers and widows were each 5 p.c., of all bridegrooms and brides in 1947, compared with 3.8 and 2.7 p.c., respectively, in 1940-42. Marriages of divorced persons made up 4.0 p.c. of the total in 1947.

**Religious Denominations of Brides and Bridegrooms.**—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 38 shows the very strong influence that religion has on marriage. Approximately 70 p.c. of all marriages are between persons of the same religious denomination; among those of Jewish faith, it was 96 p.c. in 1947; and among Roman Catholics 88 p.c.; United Church 61 p.c. and Eastern Orthodox 58 p.c.

## 38.—Marriages by Religious Denominations of Contracting Parties, 1945-47

## Subsection 2.—Dissolutions of Marriage (Divorces)

For many years after Confederation, the number of divorces in Canada was very small. It was less than 20 in every year before 1900. There were 23 divorces in 1903, 51 in 1909 and 60 in 1913. These numbers were less than 1 per 1,000 of the yearly number of marriages.

One effect of the First World War was to increase the number of divorces. The generally unsettled conditions and the long separation between men on Active Service and their wives contributed to this increase. Changes in law and procedure

which made it easier to obtain divorce was a further factor. At present, Quebec is the only province in which applicants for divorce must secure a private Act of Parliament.

There were 114 divorces in Canada in 1918 and 608 in 1926; the number had increased to 700 by 1931, 1,570 by 1936 and 2,369 by 1940. In every year since then the number has been higher than in the year before. The figures for the most part cover only final decrees of dissolution of marriage which alone constitute divorces; annulments and legal separations are excluded.

The statistics of dissolutions of marriage were revised in 1941 with the co-operation of the provincial authorities and the Clerk of the Divorce Committee of the Senate of Canada.

<sup>2</sup> A Divorce Court was established in Prince Edward Island in 1945 and figures for 1946 and 1947 are shown in the third column.

## Section 8.—Vital Statistics of Yukon and the Northwest Territories

The vital statistics of Yukon and the Northwest Territories have been collected since 1924. These statistics are not presented with those of the nine provinces in the tables of this Chapter, because the figures are not considered complete. The details are in many cases not available, and the small and varying population of each year is not accurately known.

## Section 9.—Vital Statistics of Newfoundland Prior to Union

A short summary of the latest principal vital statistics for Newfoundland prior to union are presented in Tables 41 and 42. These figures are taken from the reports of the Registrar General of Newfoundland. When figures for 1949 are available, the vital statistics for Newfoundland will be included with the provincial totals.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

While the major responsibility for public health and welfare has rested with the provinces, the fiscal capacity of these Governments has not always been sufficient to meet the demands for either improved or new social legislation. On the other hand, the Federal Government, which occupies a much stronger financial position than do provincial and local governments, has faced certain constitutional limitations with regard to social security measures. In order to circumvent these difficulties in the furtherance of social legislation different approaches have been used. In the case of unemployment insurance an amendment to the British North America Act was obtained placing this field of activity under Federal jurisdiction. But in the field of old age benefits a joint Federal-Provincial pension program was established. While this pension plan is administered provincially, Federal financial assistance is provided through grants-in-aid representing 75 p.c. of the pension. Similarly, in the area of public health, financial aid is being extended through several Federal health grants for the strengthening of Provincial Health Services. Family Allowances, a Federal non-contributory program, illustrates a third approach.

In addition, the Federal Government administers a number of programs which do not fall within provincial jurisdiction, such as health and welfare services for Indians and Eskimos, narcotic control, immigration health services, the sick mariner medical and hospital care program, and health and welfare programs for disabled veterans and the Armed Forces.

During colonial days, private charity including church aid, together with very limited public provision for institutional care of the indigent, the mentally ill and the sick, were the main social services. In 1871, four years after Confederation, Canada, with a population of about 3,700,000 persons, was spending around

\$1,000,000 on its public health and welfare programs. By 1949, health, welfare and income maintenance expenditures had risen to over \$900,000,000 while the population of 13,549,000 had only slightly more than trebled.

Of the expenditure on health, welfare and income maintenance programs by Federal and Provincial Governments and local administrations, almost 80 p.c. of the cost is being borne by the Federal Government. Although Federal expenditures on these social services have been relatively large, the bulk of Federal outlays has been for cash benefit programs, the more costly type of social security measure, as opposed to health and welfare services.

Provincial and municipal governments, while carrying proportionately less of the load of income maintenance programs, are playing an increasingly greater role in the provision of services, whether they be the impersonal environmental services such as sanitation or personal services such as the care and protection of children.

The public programs have been assisted and supplemented by the work of voluntary health and welfare agencies. The growth in professional education and number of trained health and welfare workers, and the development after the First World War of community chests and welfare councils, have strengthened voluntary services both in quality and in extent of coverage.

English poor law provisions were transplanted to most colonial areas in British North America leaving the main responsibility for the relief of the needy with local governments. Lack of local government organization and geographic factors in Newfoundland and Prince Edward Island made for centralized administration of relief in these two provinces while in Quebec the poor law approach failed to gain acceptance initially because of the strength of church charity.

With the mass unemployment of the 1930's and the need for relief on a broad scale, municipalities were financially unable to cope with the problem. The Federal and Provincial Governments extended financial aid in the form of grants both for direct relief and for public works. However, at the beginning of the Second World War the Federal Government withdrew its support from unemployment relief programs and similar action was followed by most provinces leaving the full responsibility for unemployment assistance to local governments. However, in two provinces, British Columbia and Ontario, substantial provincial grants toward local relief of 'unemployables' and their dependants are made while in Saskatchewan grants are made for both employables and unemployables and their dependants. In Quebec, the Public Charities Act enables the Provincial Government, the municipalities and private charity to share the costs of general assistance programs under the administration of the private agency.

During the War and immediate post-war period, the high level of employment minimized the amount and the duration of unemployment of able-bodied persons. Further, the coming into operation of Federal Unemployment Insurance in 1941, with a coverage of upwards of 3,000,000 workers, has provided a measure of protection for a large sector of the labour force. The National Employment Service, established in 1940, has provided a useful agency for the more effective utilization of manpower resources. Of fundamental importance for the future, particularly in the event of recession, is the attitude of Federal and Provincial Governments towards unemployment assistance and the Federal Government's fiscal policy and public investment program.

In addition to Unemployment Insurance, the Federal Government administers a number of other important income security schemes. Through the family allowances program, which began operation in 1945, about \$290,000,000 annually is paid out to 1,800,000 families on behalf of some 4,000,000 children, providing more economic security for the family and greater stability for the economy. The Prairie Farm Assistance plan offers crop insurance for prairie farmers, and support-prices for certain agricultural and fish products give a degree of income security for farmers and fishermen. War Pensions and War Veterans' Allowances have been provided as income maintenance programs for veterans who are disabled or in need.

Other important public income maintenance measures in Canada include the Federal-Provincial Old Age and Blind Pensions Scheme, and the provincial mothers' allowances and workmen's compensation programs.

In the provision of health and welfare services, the Federal Government has assisted the provincial programs through several health grants and physical fitness and vocational training grants. Federal aid has also been extended to the Schools of Social Work to assist in the training of social workers.

Within the framework of provincial statutes, a substantial part of the responsibility for welfare is borne by municipal governments, with Provincial Governments playing an increasing role in co-ordination and supervision of services and in sharing of costs. These services may include any or all of the following: family welfare; provision for the protection and support of children when normal parental care breaks down or is destroyed; protection of unmarried mothers and their children; relief in cash or kind; guidance and counselling services; institutional care, or supervision of institutional care, of aged or other needy persons; medical care to needy persons; leisure time and recreation services; special services to youth; and maintenance of juvenile or other correctional institutions.

In each province child care and protection is provided under child protection Acts which establish a central authority charged with the duty of stimulating and supervising the child protection program for the entire province. Six of the ten provinces delegate the responsibility for child protection to Children's Aid Societies, a distinctively Canadian development, in areas where they are established. These voluntary Societies operate under their own citizen boards but are subject to supervision by the provincial governments and receive both provincial and municipal financial support. Provincial Child Welfare Officers are directly responsible for the protection of children who have no established residence or who reside in an area which has no Children's Aid Society.

As in the case of public welfare, responsibility for public health and medical care in Canada is divided among Federal and Provincial Governments and local administrations, with important contributions also being made by private associations and organizations. While the Federal Government has certain specific health functions, centred largely in the Departments of National Health and Welfare and Veterans Affairs, the actual administration of public health and medical care programs, except for care provided to veterans for war-connected disability, members of the Armed Forces, Indians and Eskimos, and other Federal charges, is a provincial responsibility, carried out generally in co-operation with local governments.

No comprehensive public medical and hospital care program has yet emerged for Canada as a whole, though some progress has been made in the past decade. During the depression period a movement for health insurance developed in some

parts of the country. Health insurance legislation was passed in Alberta in 1935 and in British Columbia in 1936 but it did not go into effect. Wartime discussion and planning led to the publication of two reports, the Report of the Special Committee on Social Security and the Report on Social Security in Canada, both of which recommended health insurance. A Federal proposal to the Dominion-Provincial Conference on Reconstruction of 1945 outlined a nation-wide program of public medical care at an estimated annual cost of \$250,000,000.

Some of the more significant advances in public health and public medical care in recent years included the introduction of a Federal health grant program to assist provincial health services and to prepare for a broad health insurance scheme; the establishment of a prepaid public medical care scheme in Health Region No. 1 (Swift Current Area) in Saskatchewan; and the implementation of province-wide public hospital care schemes in Saskatchewan and British Columbia. With the entry of Newfoundland into Confederation another provincial prepaid hospital-care plan was brought into the orbit of Canadian experience. In this province, a cottage hospital scheme, which has been in operation for a decade and a half and which covers a considerable sector of the population outside of St. John's, provides hospital and medical care on a prepaid basis.

## PART I.—PUBLIC HEALTH\*

The Federal Government has responsibility for international health agreements, national services such as public health engineering, quarantine, civil aviation medicine, promotion of medical research and regulation of the sale and distribution of food products and drugs, provides assistance to provincial health services and non-government agencies and administers medical care programs for certain groups. Its functions are described in Section 1. The activities of the provincial governments are given in Section 2.

### Section 1.—Federal Health Activities

Federal participation in health matters is largely centred in the Department of National Health and Welfare, with certain important programs being administered by other departments such as the Department of Veterans Affairs, which provides medical and hospital care to veterans for disability suffered as a result of war service, the Department of National Defence, which is responsible for the health of the armed forces, and the National Research Council which, through the Division of Medical Research, administers grants for and co-ordinates medical research.

Under the Department of National Health and Welfare Act of 1944 the Department is responsible for the administration of certain statutes, for research in health matters, for the enforcement of international health obligations undertaken by Canada and, in co-operation with the provinces, for the preservation and improvement of public health.

Under the Quarantine Act the Department maintains a maritime and aerial navigation quarantine to exclude infectious diseases. It advises on the administration of sections of the Immigration Act dealing with health, provides care for sick mariners under Part V of the Canada Shipping Act and has certain national and international responsibilities under the Navigable Waters Protection Act with regard to the pollution of boundary and other waters.

\* Revised under the direction of Dr. G. D. W. Cameron, Deputy Minister of National Health, Department of National Health and Welfare.

Under the Food and Drugs Act, the Proprietary or Patent Medicines Act and the Opium and Narcotic Drugs Act the Department is responsible for the control of the quality of food and drugs, the registration, preparation and sale of proprietary or patent medicines and control of the import, export and distribution of narcotic drugs.

Health services for Indians and Eskimos as required by the Indian Act, 1876, are administered by the Department; it passes on the eligibility of applicants for pensions for the blind and co-operates with the provinces in the provision of remedial services for blind pensioners; it is responsible for supervision over the health conditions of persons engaged on Federal public works as provided under the Public Works Health Act and carries on a program for the conservation and promotion of the health of civil servants and other Government employees. A Division of Civil Aviation Medicine was established in 1948.

### National Health Grant Program

The announcement in May, 1948, of the National Health Grant Program enormously increased the Federal contribution to provincial health services and facilities by making available to the provinces annual grants of over \$30,000,000.

The Program is divided into three parts: a Health Survey Grant to assist the provinces in assessing their needs and the priority with which they should be met; a group of eight annual grants designed to assist in the extension and development of provincial health services; and an annual grant to assist in hospital construction. Except those for health survey and cancer control, the health grants are contingent upon the provinces maintaining, through their own resources, at least the pre-existing standard of services in the health field of each grant. A description of the individual grants follows:—

*The Health Survey Grant.*—\$625,000 is designed to assist the provinces in surveying health services and facilities, including hospitals, and in studying ways and means for their improvement. The grant which, unlike the others is non-recurring, is distributed on the basis of \$5,000 to each province and the balance according to population, with the total payment available to any province not less than \$15,000.

*The General Public Health Grant.*—\$4,395,000 is designed to assist in the strengthening of general public health services. It is distributed among the provinces on the basis of 35 cents per capita in 1948, with the grant being increased annually in succeeding years by 5 cents per capita until it reaches 50 cents per capita.

*The Tuberculosis Control Grant.*—\$3,000,000 is designed to permit an accelerated and intensified effort directed towards the eradication of tuberculosis in Canada and to extend progressively the provision of free treatment. The distribution of the grant is based on a flat payment of \$25,000 to each province with the balance being divided 50 p.c. according to population and 50 p.c. according to the average number of deaths from tuberculosis in each province over the five-year period 1942-46, inclusive. It is intended that the grant be increased to \$4,000,000 annually after it has been in operation for a period of two years.

*The Mental Health Grant.*—\$4,000,000 is designed to assist the provinces in the prevention of mental illness and in extending progressively the provision of free treatment. It is distributed on the basis of a flat amount of \$25,000 to each

province and the balance according to population. It is intended that the grant be increased to \$5,000,000 at the end of two years, to \$6,000,000 at the end of four years, and to \$7,000,000 at the end of six years.

*The Venereal Disease Control Grant.*—\$500,000 increases the \$225,000 grant previously made to the provinces to assist in extending and intensifying their efforts toward the control of venereal disease. The new section of the grant is distributed according to population.

*The Crippled Children's Grant.*—\$500,000 is designed to assist the provinces in an intensive program for the prevention and correction of crippling conditions in children and for rehabilitation. The grant is distributed on the basis of a flat amount of \$4,000 to each province with the balance allocated on a per capita basis.

*The Professional Training Grant.*—\$500,000 is designed to assist the provinces in the training of public health and hospital personnel. It is distributed on the basis of a flat amount of \$4,000 to each province with the balance allocated on a per capita basis.

*The Public Health Research Grant.*—\$100,000 is designed to assist the provinces in stimulating and developing public health research. The provinces may submit projects individually or jointly to the Dominion Council of Health, and, with the approval of a province or provinces, a university or research body may also submit a project. The grant is increased by \$100,000 each year until it reaches the sum of \$500,000 annually.

*The Cancer Control Grant.*—\$3,500,000 is designed to assist the provinces in programs for the control of cancer. The grant is distributed on a dollar for dollar matching per capita basis for approved programs of cancer control.

*The Hospital Construction Grant.*—\$13,000,000 is designed to assist the provinces in the provision of adequate accommodation for hospital and health services. The annual grant is distributed on the basis of population and will be reviewed at the end of five years from the commencement of the program, and possibly reduced by one-half at that time.

**Federal Grants to Non-Governmental Organizations.**—Provision was made in the 1948-49 Estimates of the Federal Government for grants to the following non-governmental agencies engaged in health work: the Canadian Red Cross Society, the Canadian Tuberculosis Association, the Victorian Order of Nurses, the St. John Ambulance Association, the Canadian Paraplegic Association, the Canadian National Committee for Mental Hygiene, the Health League of Canada, the Canadian Public Health Association, the Canadian National Institute for the Blind, L'Association Canadienne Francaise des Aveugles, L'Institut Nazareth de Montreal and the Montreal Association for the Blind.

**Medical Care of Indians and Eskimos.**—Government health services for Indians and Eskimos have gradually expanded. In 1949 there were 20 hospitals administered by the Federal Government together with a number of mission hospitals and nursing stations. Larger Indian reserves have a full-time Departmental medical officer; smaller bands have attention on a part-time basis or, in some cases, the local physician receives fees for services rendered to Indians.

A country-wide staff of physicians, nurses and field matrons and dispensers arranges for medical attention and hospitalization, field nursing and general health services. The present marked expansion of Indian health services began in 1928

when a separate Medical Branch was established in the Department of Indian Affairs. In 1945, Indian health services were transferred to the Department of National Health and Welfare and are now conducted through a small headquarters staff.

### **Consultative and Co-ordinating Services**

The principal co-ordinating agency in the health field in Canada is the Dominion Council of Health composed of the Deputy Minister of National Health as Chairman, the chief executive officer of each Provincial Health Department and five other persons. The Council advises the Minister of National Health and Welfare on the formulation of policy. It is largely responsible for the development of an integrated and co-operative health program and for the establishment of services for the benefit of Provincial Health Departments by the Federal Government. Dominion-Provincial Committees under the Dominion Council of Health deal with specific aspects of public health.

The Department of National Health and Welfare carries on an active program of co-ordinating and consultative services for the provinces, through its various divisions—Venereal Disease Control, Blindness Control, Child and Maternal Health, Industrial Health, Nutrition, Mental Health, Dental Health, Epidemiology, Hospital Design, Laboratory of Hygiene, Physical Fitness, Information Services, and Research. These divisions also provide technical information and advice and, independently and in co-operation with other departments and agencies, conduct surveys and research in the development and evaluation of programs and procedures including the establishment of standards.

The Department was instrumental in calling conferences of interested individuals and representatives of various organizations to consider the problems of cancer and arthritis. These meetings resulted in the establishment in 1947 of the National Cancer Institute of Canada and in 1948 of the Canadian Arthritis and Rheumatism Society.

## **Section 2.—Health Activities of the Provincial Governments**

**Newfoundland.**—In Newfoundland, where there has been little development of local government organization, administration of health measures is largely centralized in the Department of Public Health and Welfare. In addition to public health functions the Department, which was established in 1934, administers hospitals and is responsible for the provision of medical care in large areas of the Province. When Newfoundland entered Confederation, Mar. 31, 1949, separate portfolios for Health and Welfare were established.

The Public Health Division of the Department is under the administration of a Director of Medical Services. Specific functions of the Division include: provision of medical care to the indigent; operation of hospitals, the cottage hospital scheme and nursing services; the carrying on of tuberculosis, communicable disease and venereal disease control programs, and inspection services. A trained nutritionist directs publicity and education programs in nutrition, and the Department takes an active part in school health programs both through educational work and by such activities as the distribution to schools of chocolate milk powder and cod liver oil for school children.

A free service is provided through the Tuberculosis Dispensary at St. John's which makes diagnostic and treatment services available to the city and acts as a centre for Tuberculosis Control for the Province. All cottage hospitals are equipped

for X-ray. The Province subsidizes separate tuberculosis control programs in the northern areas of the Province conducted by the International Grenfell Association and the Notre Dame Bay Memorial Hospital and assists with Newfoundland Tuberculosis Association surveys in other areas.

Free treatment for venereal disease is available throughout the Province. Free drugs are distributed for use in all areas and doctors are reimbursed for treatment provided.

At St. John's the Department operates a General Hospital, a Tuberculosis Sanatorium and a Hospital for Mental and Nervous Diseases. In the outports it operates 14 cottage hospitals, with a total capacity of about 500 beds, and a number of nursing stations. The Infants Home and the Home for the Aged and Infirm are departmental institutions also located at St. John's. The Government is building at Corner Brook a new provincial tuberculosis sanatorium and is providing financial assistance in the construction of a general hospital. Other hospitals are reimbursed for departmental cases at a per diem rate. The Grace Hospital at St. John's receives an annual grant of about \$14,400 for maternity cases. Substantial grants are made to the Notre Dame Bay Memorial Hospital and Clinic and to the International Grenfell Association, which serve the Notre Dame Bay area, and the White Bay and St. Barbe Districts and Labrador, respectively.

Under the cottage hospital scheme the head of each family pays \$10 and each single adult \$5 annually for medical and hospital care. Services available to subscribers include out-patient diagnosis and treatment, hospitalization as required, admission to hospital for complicated maternity cases, domiciliary visits by the doctor and admission to the cottage hospital, the General Hospital at St. John's or, when necessary, to hospitals in other provinces. A charge is made for medicines, a nominal fee is charged for dental extractions and there is a fee of \$10 for maternity cases. The subscriber provides his own transportation. Medical officers in charge of the cottage hospitals receive a basic retaining fee, payments for prophylactic inoculations, for certain surgical procedures and for venereal disease treatments and two-thirds of the fees collected in the hospital district; part-time District Medical Health Officers are paid annual subsidies for departmental work in addition to fees for special services. Other doctors are reimbursed for services to indigents on a fee basis. In districts not served by doctors nursing services are provided on payment of an annual fee of \$6 per family or \$3 for a single person.

**Prince Edward Island.**—In 1946 the Department of Public Welfare, which administered both health and welfare functions, was reorganized as the Department of Health and Welfare.

Under the supervision of the Chief Health Officer the staff of the Health Division of the Department includes a Director of the Divisions of Laboratories and of Venereal Disease Control, a Sanitary Engineer, a Director of Public Health Nursing, and a Medical Superintendent in charge of the Falconwood Hospital for mental diseases and the Provincial Infirmary for the poor and infirm.

The Province is divided into five districts; a public health nurse is assigned to each district and is responsible for general public health services such as the inspection of school children, immunization clinics, home-visiting and home-nursing classes. One nurse specially trained in the treatment of venereal disease and another specially trained in combating tuberculosis have the entire Province as their field of operation.

The Division of Laboratories consisting of Histology, Bacteriology, Serology, Hematology and Biochemistry laboratories, aids hospitals and practising physicians of the Province.

The Provincial Government operates, at Charlottetown, a Provincial Sanatorium of 145-bed capacity under a Board of Commissioners. An annual grant is made to aid ex-sanatorium patients when required and to provide assistance to indigent tubercular persons awaiting admission and to their families. Field work in the diagnosis and treatment of tuberculosis is one of the responsibilities of the Health Division and clinics are held periodically at central points in the Province. The Prince Edward Island Tuberculosis League, a voluntary organization, works in close co-operation with the Provincial Sanatorium and the Health Division. A 20-bed hospital for crippled children is maintained at the Provincial Sanatorium.

The Department of Health and Welfare operates two venereal disease clinics, one at Charlottetown and the other at Summerside; hospital beds are provided for selected cases. All necessary medication is supplied free of charge to persons who are not within reach of public health clinics.

Grants are made to all general hospitals at a rate of 75 cents per diem for all patients. These general hospitals in turn agree to accept without charge all indigent persons requiring treatment. Expenses in connection with the operation of a hospital for the insane are borne practically in full by the Provincial Government.

**Nova Scotia.**—The Nova Scotia Department of Public Health administers a province-wide program of public health services. Its principal divisions are Public Health Nursing, Industrial Hygiene, Neuropsychiatry, Physical Fitness and Nutrition, Sanitation and Laboratories.

The Province is divided into eight health divisions, seven of which are under the direction of, and are financed by, the Province. The city of Halifax, which constitutes the eighth, receives partial support from the Province. Each division is staffed by public health nurses and sanitary inspectors and is under the supervision of a Director or, in the case of Halifax, a Commissioner. The divisions are equipped with portable X-ray and other apparatus and provide the following services: health education, communicable disease control, environmental sanitation, public health nursing, and maternal, infant and child hygiene.

Diagnostic services including bacteriological and other examinations and milk and water analyses are provided to physicians and health divisions by the Provincial Laboratories. Streptomycin for tuberculosis and penicillin for venereal disease cases are provided by the Province.

Five provincially owned hospitals are operated under the direction of the Department, including the general hospital, three tuberculosis sanatoria, and the Nova Scotia Hospital for mental cases. A cancer clinic and a "Kenny" treatment clinic for poliomyelitis are attached to the general hospital. Treatment for tuberculosis is free, and free care for mental illness is given in the Nova Scotia Hospital.

A provincial per diem subsidy is given to all approved hospitals for each patient receiving treatment. In 1949 provision was made for supplementary provincial grants covering the whole or part of the cost of medical services to recipients of mothers' allowances.

**New Brunswick.**—The Department of Health and Social Services has evolved from the Department of Health established in 1918 under the New Brunswick Health Act. The administration of the Health Branch is carried on by the Chief

Medical Officer, who is also Registrar-General. Provincial Government hospitals consisting of two tuberculosis sanatoria and one mental hospital are operated under the supervision of medical superintendents. Divisions supervised by full-time Directors are: Hospital Services, Laboratory Services, Public Health Nursing, Venereal Disease Control, Tuberculosis Control, Maternal and Child Welfare, Mental Health, Cancer Control, Sanitary Engineering, and Dental Hygiene. Seven Medical Health Officers are engaged in District work.

Health services are administered through 16 sub-health districts; 15 of these are coterminous with the counties of the Province, and the city of Fredericton forms the sixteenth. Two or three sub-districts are grouped under the supervision of one District Medical Health Officer, who is responsible for the enforcement of public health legislation within the area.

District Health Officers assisted by public health nurses administer a preventive program of disease control, laboratory service, child and school hygiene, sanitation, immunization and health education. Municipal nurses and the Victorian Order of Nurses are subsidized by the Provincial Department of Health to aid in this work. Consultative and educational services are provided in the fields of dental hygiene, maternal and child welfare, nutrition and sanitation. The Provincial Department exercises supervision over the sub-district Boards of Health.

Clinics within the health districts provide X-ray and diagnostic services for tuberculosis. Cancer diagnostic clinics provide free diagnosis with free tissue examination for clinic biopsies. Free treatment is provided for indigents suffering from venereal disease through fees for service to physicians or at clinics, and free hospitalization is given when required. Acute and immediate post-paralytic phases of poliomyelitis are hospitalized at provincial expense. Pneumothorax treatment for convalescent tuberculosis patients is supplied by the Province by payment of physicians' fees. The Health Department supervises three sanatoria in addition to the two owned by the Province, and operates clinics in the larger centres.

Mental health services have been recently organized and expanded to include free preventive and diagnostic clinics. The Provincial Mental Hospital provides treatment of which approximately 60 p.c. of the cost is borne by the Province.

Pathological, bacteriological, serological and chemical tests are provided by the Provincial Laboratories whose Director also supervises the distribution of vaccines, sera and bacteriologicals, including free immunizing agents, drugs for venereal diseases and insulin for indigent diabetics.

Hospital care is subsidized by a provincial per diem grant to approved hospitals for all patients. Hospitalization in tuberculosis sanatoria is provided to all free of charge.

**Quebec.**—The Ministry of Health, established in 1936, deals with matters relating to health, preventive medicine and public charities. It replaced the Provincial Bureau of Health that had operated since 1922 under the Provincial Secretary.

The Ministry of Health maintains the following divisions: Laboratories, Sanitary Engineering, Demography, Hospitals for the Insane, Public Charities, Health Units, Epidemiology, Industrial Health, Nutrition (including Maternal and Child Health), Venereal Diseases, Tuberculosis, Health Education, Foster Home Care, and Medical Service for Settlers.

Three important Acts were passed at recent sessions of the Quebec Legislature designed respectively to facilitate the medical studies of young physicians who pledge themselves to practise in rural areas, to subsidize the establishment of a School of Hygiene at the University of Montreal, and to launch a five-year program aimed at providing 2,000 additional beds for the control of tuberculosis.

Since 1926, a system of county health units has been gradually established. Each unit provides full-time public health service to a county or a group of two or three adjoining counties. There are now 64 county health units covering 74 counties; the Ministry of Health is responsible for their maintenance and operation; local contributions amount to 6.5 p.c. of the cost. Eighteen municipalities, such as the cities of Montreal, Quebec and Sherbrooke, have their own Health Bureaus.

Local health services include free dental, anti-tuberculosis, well-baby and immunization clinics, and consultation and home visits. These are in addition to the usual sanitation measures, the collection of vital statistics, the supply of biologicals, and health education. Hospitalization and certain forms of medical aid are supplied to indigents and the inhabitants of sparsely settled areas.

Drugs supplied by the Provincial Department to physicians and health units include vaccines, sera, antitoxins; a Federal grant pays for streptomycin for sanatoria patients and also helps to provide laboratory services to physicians and health units.

Public mental institutions are operated by the Health Department; tuberculosis sanatoria, operated chiefly under private and religious auspices, are supervised by the Department. Mental and tuberculosis institutions and hospitals are subsidized by Provincial and municipal grants; indigents are provided with hospital care through equal contributions of the hospital board, the municipality and the Province.

**Ontario.**—The Department of Health is organized under a Minister, a Deputy Minister who is also Chief Medical Officer, and an Assistant Deputy Minister. The Department carries on public health services through the following divisions: Public Health Administration; Public Health Nursing; Maternal and Child Hygiene; Dental Services; Epidemiology; Venereal Disease Control; Tuberculosis Prevention; Industrial Hygiene; Laboratory Services; Administration of Mental Hospitals; and Sanitary Engineering. There are also divisions for the supervision of certain aspects of medical treatment centres throughout the Province, including public general and private hospitals and nurse registration. Serving all divisions of the Department are the Legal Division and the Medical Statistics Division.

Public health legislation affecting water supplies, milk and food sanitation and all other forms of environmental sanitation is administered by the Department. Provincial public health nurses aid local Boards of Health in the organization and promotion of public health nursing services. The 15 branch laboratories (nine regional and six subsidized) carry out bacteriological and other examinations for clinics, hospitals and private physicians.

The Division of Industrial Hygiene is responsible for the control of occupational diseases and acts as adviser to the Factory Inspection Branch of the Labour Department, the Workmen's Compensation Board and to industry generally.

In addition to care provided through maternal and child health clinics, any resident mother may have one free prenatal examination; doctors are remunerated by the Provincial Government. Biologicals and other materials for the prevention and control of acute communicable diseases, insulin for diabetics and streptomycin for tuberculosis patients, are distributed free of charge by the Department.

Care is provided for the mentally ill in 15 institutions operated by the Provincial Government. Three special units are concerned with the care of epileptics, the tuberculous and the criminally insane. Travelling mental health clinics are organized and operated with the assistance of district consultant psychiatrists.

Public health services are administered by health units and urban health departments under the supervision of the Provincial Department and with provincial financial support. Twenty-four health units have been completed and the northern part of the Province, which is still unorganized, is provided for directly by the Department of Health.

Clinical care in the local health units is supervised by the appropriate divisions of the Department; consultative services, diagnosis and minor treatment are provided for venereal disease; four chest clinics are maintained for tuberculosis at various points in the Province and three travelling mass-survey units are operated; a railway dental car serves certain areas in the northern part of the Province and the Division of Dental Services is responsible for dental health education programs and clinics in hospitals and other institutions.

Limited medical services are provided to old age pensioners and other recipients of social assistance under an agreement with the Ontario Medical Association. Necessary hospital care is supplied to indigents through a daily grant paid to hospital boards by provincial and municipal authorities. The hospitals in Ontario are graded according to size and type and a maximum provincial and municipal per diem grant is fixed for each grade. Tuberculosis sanatoria, operated under provincial or private auspices, are subsidized by provincial grants. Provincial grants-in-aid are given to local boards of health for dental services and for venereal disease clinics. Financial assistance is offered for post-graduate study in public health nursing.

In the academic year 1947-48, financial aid was extended to seven doctors, 29 nurses, one veterinarian and two sanitary engineers to assist them in the pursuit of studies in public health. Grants-in-aid were also paid to the six County Public Health School Nursing Services operating in 1948.

**Manitoba.**—In Manitoba health activities are administered in co-ordination with welfare services by the Department of Health and Public Welfare under the direction of a Minister. The Department has four main divisions: General Administration; Health Services; Psychiatric Services; and Welfare Services.

The Division of Health Services has four sections: (1) Environmental Sanitation, (2) Preventive Medical Care including communicable disease control, maternal and child hygiene and public health nursing, (3) Extension Health Services including consultative services for, and general administration of local units, diagnostic services and medical care, and (4) Laboratory Services.

The Division of Psychiatric Services supervises the provincial mental institutions at Winnipeg, Selkirk, and Brandon and a school for the mentally defective at Portage la Prairie. This division is also responsible for out-patient services, child guidance clinics, services to courts and child-caring agencies, boarding-home care for the mentally ill, and teaching facilities.

The Province is divided into health regions composed of groups of municipalities, with hospital districts, medical care districts, medical-nursing units, and diagnostic centres within these regions. The Province subsidizes the employment of doctors on a prepayment plan in medical care districts within the health regions. Outside these districts nurses provide emergency care particularly to maternity patients and operate immunization and child and maternal health clinics.

Diagnostic centres are being established throughout the Province to serve as headquarters for consultant radiologists and pathologists and to furnish laboratory diagnoses, cardiography and electroencephalography free of charge, and X-rays at a small minimum charge, to any resident within the diagnostic area referred thereto by a medical practitioner. Centres at Selkirk and Dauphin are already in operation.

Clinics provide preventive and treatment services for tuberculosis, venereal disease, mental illness and cancer. Care provided for tuberculosis includes pneumothorax and other treatment in out-patient clinics of sanatoria, and X-rays and diagnoses at mobile and stationary clinics operated by the Department. Venereal disease clinics supply free diagnosis and minor treatment. The Manitoba Cancer Relief and Research Institute which is subsidized by the Province correlates all cancer activities. A cancer biopsy service is available without charge to all rural physicians and is being extended to other physicians and to hospitals lacking pathological services of their own; X-ray therapy may be obtained without charge by those living outside Winnipeg. Through the out-patient services of the mental hospitals psychiatric examinations and case-work help are given to those who are referred by physicians and social agencies.

Drugs are distributed to doctors, hospitals and government agencies throughout the health units by the Provincial Health Department; penicillin and drugs used in venereal disease treatment, insulin and other biologicals are included; Federal grants-in-aid pay for streptomycin and other antibiotics provided, without charge, to tuberculosis patients in sanatoria.

Recipients of public assistance are entitled to the services supplied within the health regions by medical care and medical nursing districts and diagnostic centres. The Provincial Government provides medical and hospital care for patients from unorganized territory and also gives dental, optical and pharmaceutical supplies to public aid recipients.

The Provincial Government pays two-thirds of the cost of preventive medical services, one-half the cost of diagnostic and specialist services and one-half the cost of dental care in addition to grants for hospital construction and local health services. The remainder of the cost is met by the municipalities. The Provincial Government also contributes a per diem grant to hospitals and sanatoria on behalf of all public ward patients, a lump sum grant to teaching hospitals and pays hospitalization charges for indigents from unorganized areas.

**Saskatchewan.**—Health activities in Saskatchewan are administered under the Department of Public Health and a Health Services Planning Commission set up under the terms of the Health Services Act, 1946.

The Department of Public Health consists of 14 divisions which conduct, supervise and assist with various aspects of the public health program including the following: the Public Health Nursing Division which supervises maternity grants and provides field services for venereal disease, tuberculosis, mental health and other programs; the Communicable Diseases Division which distributes free vaccines and sera to doctors, health departments and hospitals and supervises immunization programs and poliomyelitis clinics; the Division of Laboratories, which does routine work in bacteriology, serology, chemistry and pathology and provides clinical diagnostic service for rural physicians; the Mental Services Division which organizes and supervises mental institutions and clinics; the Venereal Disease Control Division which administers diagnostic and treatment services and epi-

epidemiology and supervises public clinics. An Air Ambulance Service provides emergency transportation at a nominal charge of \$25 per flight. Other divisions are: Administration, Sanitation, Vital Statistics, Health Education, Nutrition, Regional Health Services and Dental Health. A division of Child and Maternal Hygiene is being organized to conduct crippled children's services.

The Saskatchewan Cancer Commission, with the Deputy Minister of Public Health as chairman, operates consultative, diagnostic and treatment clinics at Saskatoon and Regina serving all residents at public cost. Poliomyelitis clinics are operated at Saskatoon and Regina at public expense, as circumstances warrant. Diagnostic and treatment services for all tuberculous persons are provided at public expense in three sanatoria operated by the Saskatchewan Anti-Tuberculosis League with government supervision. Stationary and mobile tuberculosis clinics give diagnostic service and pneumothorax treatments. Mental hospital care is provided without charge to any resident in need of it.

Under the Health Services Act, 1946, the Province is divided into 14 potential Health Regions, six of which have been organized. In each region a regional health board is established which, assisted by advisory committees on dentistry, nursing and medicine, administers general public health services.

Health Districts within the Region are represented on a District Health Council. Public health nursing, dental care and clinical facilities are provided; general practitioner care and specialist services are as yet provided only in the one Health Region where the plan is in full operation. In some districts within the other Regions, a municipal doctor system has been in operation for many years; under this system a contract between the municipal authority and a duly qualified medical practitioner provides for the services of the latter to all bona fide residents of that municipality. Legislation in 1949 provided for compulsory pasteurization of milk sold for human consumption in cities and towns of 1,000 population or over.

The Health Services Planning Commission administers the Saskatchewan Hospital Services Plan and supervises hospital planning, construction, and administration, and all approved hospitals and nursing homes. It is also an advisory and consultative body to health regions, municipalities, local improvement districts, district union hospitals, municipal and voluntary health plans, and it is responsible for administration of medical care and hospital construction grants. The Commission's Medical Services Division supervises payment of grants to physicians, dentists, and approved hospitals for indigents outside municipal jurisdictions.

The Saskatchewan Hospitalization Act, 1948, provides prepaid hospital care throughout the Province. It covers public ward accommodation, operating and case room facilities, drugs, surgical dressings and X-rays. Under the scheme all persons are covered, except those otherwise provided for by the Government (e.g., members of the Armed Forces and persons in institutions). The cost of the hospitalization is met by a personal tax of \$10 per annum per person, with a maximum of \$30 per family. The Provincial Treasury meets any deficit and also pays the tax for pensioners and public assistance recipients, except in the case of those public assistance recipients who are a charge on the municipality and for whom the municipality pays the tax.

A complete medical care scheme in operation in Health Region No. 1, the Swift Current area, composed of 87 predominantly rural municipalities, serves 54,000 persons. This plan includes general practitioner and specialist services, diagnostic and out-patient services and children's dental care. Hospitalization is

provided for separately under the Saskatchewan Hospitalization Act. The plan is financed by a fee of \$15 per capita with a family maximum of \$35, a general property tax, and a provincial per capita grant for general medical care and public health services, and a provincial contribution of one-half the cost of radiological and dental services.

Medical, hospital, dental, optical and part drug services are provided at public expense to old age and blind pensioners and their dependants and to beneficiaries of mothers' allowances.

**Alberta.**—The Department of Public Health was established in 1919 and was given the authority and responsibility for administering all the statutes of the Province relating to health. The Public Health Act passed in 1907, established the Provincial Board of Health that now consists of three members, the Provincial Medical Officer of Health, the Provincial Sanitary Engineer, and the Provincial Bacteriologist.

The Department consists of the following 14 divisions: Communicable Disease, Public Health Education, Hospital and Medical Services, Laboratory, Public Health Nursing, Municipal Hospitals, Social Hygiene, Sanitary Engineering and Sanitation, Cancer Services, Mental Health, Tuberculosis Control, Entomology, Vital Statistics, Nutrition Services.

Alberta administers its public health program for urban and for rural areas through health units and 18 Rural Health Districts; the program includes infant and child welfare clinics and pre- and post-natal instruction. In isolated areas District Nursing Units are set up; they supply first-aid and obstetrical services and are equipped with drugs and medical and surgical supplies.

Clinics operated by the Department provide the following free services to the general public: diagnosis and treatment, including drugs, for venereal disease; medical examination for cancer; mental guidance and psychiatric examinations; physical and X-ray examinations and tuberculin tests for tuberculosis at stationary and travelling clinics and mobile X-ray units; post-discharge treatment of poliomyelitis cases. The Communicable Diseases Division supplies biological products for preventive work. The services of the Provincial Laboratory are available to all doctors, Boards of Health and approved hospitals. The Laboratory distributes sera and biological products.

The Department pays for hospitalization for a period not exceeding 14 days on behalf of cancer patients admitted to hospital for diagnostic treatment on the order of the cancer clinics. Surgical, X-ray or radium treatment is also available if recommended by the clinic. Mental care in institutions is supervised by the Department of Public Health and patients unable to pay are treated at public expense. Hospitalization in provincial tuberculosis sanatoria is provided without charge for all resident tuberculosis patients. Out-patient pneumothorax services are also available.

The Province has a complete medical care program, including hospitalization, dental care and eye-glasses for old age and blind pensioners, recipients of mothers' allowances and the dependants of these groups. The Department also provides for all residents suffering from the after-effects of poliomyelitis free medical, surgical and hospital care and rehabilitation services. An amendment in 1949 to the Bureau of Public Welfare Act made provision for the hospital and medical care

of children suffering from rheumatoid arthritis. Maternity patients may be hospitalized at provincial expense for a twelve-day period. In addition a small money grant may be given to any expectant mother in poor financial circumstances.

One-third of the population of the Province is provided with hospitalization at a minimum charge through the Municipal Hospitals Act. Under its terms general ward care is provided to the residents of municipalities which unite to form a Hospital District and to non-residents who pay a fixed annual fee. The charge to patients under the Act is fixed at \$1 per day; the remainder of the cost under the scheme is obtained through a property tax levied within the District and a provincial per diem grant. Any services additional to standard ward care must be paid for by the patient.

Provincial grants-in-aid to Health Units cover 60 p.c. of the total cost of operation. In addition the Department pays 70 cents per patient per day for a specified period to approved hospitals. It makes an orthopaedic grant to hospitals of 90 cents per day and pays one-third of the cost of a special mental hygiene service in the schools of the Edmonton Rural Health Unit. A grant, equivalent to the salary of one nurse, is paid to the City of Edmonton Health Department for a Child Hygiene Clinic.

**British Columbia.**—The Department of Health and Welfare, with one Cabinet Minister, has two branches under the supervision of the Deputy Minister of Health and the Deputy Minister of Welfare, respectively.

The Health Branch is divided into three bureaus, two of which are located at Victoria while the other is at Vancouver. The Bureau of Local Health Services, located at Victoria, consists of the Nutrition Service and the Division of Health Units, Public Health Nursing, Environmental Sanitation, and Preventive Dentistry. Also at Victoria are headquarters of the Divisions of Vital Statistics and Public Health Education which are grouped in the Bureau of Central Administration. The Divisions of Tuberculosis Control, Venereal Disease Control and Laboratories have their headquarters at Vancouver, and are grouped in the Bureau of Special Preventive and Treatment Service.

In addition to certain province-wide activities, the Health Branch through its Bureau of Local Health Services supervises local public health activities. The Province is divided into Health Units and Public Health Nursing Districts each consisting of several school districts. Nine of the 18 Health Units planned are in operation and a generalized health program is provided by a physician, public health nurses, a sanitary inspector and a statistical clerk. In more isolated areas, the Public Health Nursing Districts staffed by public health nurses and sanitary inspectors operate as forerunners to Health Units. Vancouver and Victoria have their own Health Departments, while some of the other centres have part-time medical officers. With the exception of the latter and the Vancouver and Victoria staffs all field public health personnel are employed by the Provincial Department. Approximately 94 p.c. of the population of the Province is served by full-time trained public health personnel.

General public health services are operative throughout the Health Units and unorganized territory. Stationary and mobile tuberculosis clinics provide free diagnostic and consultative service to all residents; venereal disease clinics stationed

at strategic points throughout the Health Units provide free diagnosis and treatment for all who require them; maternal and child health clinics including immunization and pre- and post-natal advice are operated by public health nurses. Several specialized divisions of the Health Branch provide consultative service and guidance to the field staff, other departments, and official and voluntary agencies. There are branch laboratories in various parts of the Province and the Division of Laboratories distributes immunizing agents free of charge to doctors, health officers and public health nurses.

Except in the two metropolitan areas where special grants are made under previous arrangements, approximately one-third of the cost of health services is borne by the local districts and the remainder by the Provincial Government with assistance from the federal health grants.

Institutions for the hospital care of tuberculosis and of mental patients, and Provincial Infirmaries for persons with incapacitating disabilities, are operated by the Provincial Government; indigents are hospitalized in these institutions at public expense. The Hospitals Act provides for provincial and municipal financial aid to hospitals.

Full medical, surgical and obstetrical care is provided to recipients of social assistance and to their dependants; these persons are also covered under the terms of the Hospital Insurance Act, and have their premiums paid from provincial funds.

An important medical care measure was inaugurated in British Columbia on Jan. 1, 1949, when the provisions of the Hospital Insurance Act came into effect. Residents are provided with public ward care including operating and case room facilities, X-ray and laboratory, diagnostic and therapeutic procedures, anaesthetics, dressings and prescribed drugs. The plan is financed by a premium of \$15 per annum levied upon each adult, with a family maximum of \$30 for the first year but these rates were increased for 1950 to \$21 and \$33, respectively.

### Section 3.—Institutional Statistics\*

Since 1930, under authority granted by the Federal Government, the Dominion Bureau of Statistics has co-operated with the provincial authorities through the Census of Institutions in the collection of nation-wide statistics for the following types of institutions: *Hospitals*—institutions primarily engaged in the prevention, cure or alleviation of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables and those under the heading "Federal Hospitals" in Table 1. *Mental and Neurological Institutions*—such as hospitals for mental diseases, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments. *Charitable and Benevolent Institutions*—caring for the poor and the destitute of all ages, such as homes for the aged, county refuges, orphanages, etc. A summary of statistics for charitable institutions for 1946 appears at p. 288. Statistics for corrective and reformatory institutions for 1946 are summarized at p. 308 of the 1948-49 edition of the Year Book.

\* Except as otherwise noted, this Section has been revised in the Health and Welfare Division of the Dominion Bureau of Statistics, Institutions Section.

<sup>1</sup> Includes beds, cribs and bassinets. and incurable units.<sup>2</sup> Includes newborn.<sup>3</sup> Does not include tuberculosis

For Canada as a whole, 653 public hospitals reported in 1947, of which 559 were general hospitals. Of the total public hospitals reporting, 515 had X-ray facilities, 357 had clinical laboratories and 263 had physio-therapy facilities.

During 1947, patients receiving treatment numbered 1,633,069; admissions numbered 1,348,857; discharges 1,549,254; live births 243,792; and deaths, 42,283. Financial returns which met the requirements of the Dominion Bureau of Statistics were provided by 588 hospitals which reported total collective days' stay numbering 17,379,231; receipts, \$107,308,818; expenditures, \$106,792,011; and average cost per patient day, \$5.55.

<sup>1</sup> The following 16 hospitals did not report for 1947: General: Que. 1; Sask., 5; Alta., 5; Women's: Sask., 2; Children's: Sask., 1; Contagious Diseases: N.S., 1; Alta., 1.

**Organized Services in Public General Hospitals.**—Organized services, which are analysed in Table 5, may be defined as specialized hospital departments or services in charge of specialists with up-to-date equipment and a technical staff specially devoted to problems in the indicated fields. Facilities available in a hospital merely for the use of general practitioners are not considered as organized services. Organized services in public general hospitals only are considered here but it is in these hospitals that the majority of such services are found. Many of the smaller public general hospitals have facilities for study and treatment in the fields indicated, but since they are not organized services as defined above, such facilities are not included in the figures. In 1947, of the 653 public hospitals, 291 had organized medical staffs with 11,031 staff doctors.

## 5.—Organized Services and Medical Staffs in Reporting Public General Hospitals, by Provinces, 1947

NOTE.—A dash in this table means that an organized service was not reported.

Staff doctors.....	72	642	420	2,786	4,018	934	545	828	786	11,031

<sup>1</sup> In addition to these totals, there were the organized services and staffs of 78 hospitals which did not make returns on specific services. There were no organized services reported in Yukon and Northwest Territories hospitals.

<sup>2</sup> These items were not included on the forms used by hospitals in Ontario.

**Out-Patient Departments.**—Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

#### 6.—Out-Patient Departments of Public Hospitals, by Provinces, 1947

NOTE.—Figures of tuberculosis sanatoria and government and municipal clinics held in hospitals are not included.

Province	Out-Patient Departments	Patients	Treatments
New Brunswick.....	2	22,324	33,923
Quebec.....	29	508,466	1,027,341
Ontario.....	15	241,991	394,304

British Columbia.....	2	14,597	37,206
<b>Totals.....</b>	<b>53</b>	<b>870,141</b>	<b>1,615,692</b>

**Tuberculosis Institutions.**—The statistics regarding institutions for the treatment of tuberculosis shown in Table 7, include special units for the treatment of tuberculosis in general hospitals and Federal hospitals as well as the specialized sanatoria shown separately in Table 1. Deaths in these institutions from tuberculosis in 1947 were 44.2 p.c. of the total deaths from the disease in Canada as shown in the Chapter on Vital Statistics at p. 215 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926.

<sup>1</sup> Four units in public hospitals at Vancouver and Victoria are operated by the Provincial Board of Health and are included with Sanatoria. <sup>2</sup> Sanatoria only (exclusive of Federal Sanatoria).

<sup>3</sup> Includes other personnel.

## Subsection 2.—Statistics of Federal Government Hospitals\*

Hospitals operated by the Federal Government are conducted for special purposes connected with departmental administration such as care of war veterans and members of the Permanent Force, the quarantine and care of immigrants and lepers, the care of Indians, etc. Table 1 shows the number of Federal hospitals compared with those in other categories for 1947.

**Department of Veterans Affairs Hospitals.**—In the year 1948 a larger number of beds in new modern fire-proof construction was added to the Department's facilities than in any other year of its history. These were made up of the new Camp Hill Hospital, Halifax, N.S., with 250 beds and Sunnybrook Hospital, near Toronto, Ont., on the completion of the hospital proper, with 875 beds.

Three older institutions were closed, Cornwallis Hospital, N.S., the Veterans' Hospital, Kingston, Ont., and the Veterans' Home, Calgary, Alta. The first two institutions were devoted exclusively to the treatment of tuberculosis. The patients in Cornwallis Hospital were transferred to specially prepared accommodation at Camp Hill Hospital, while Kingston Hospital was turned over as a completely functioning institution to the Eastern Counties Tuberculosis Association. The patients from Calgary Veterans' Home were transferred to the Convalescent Hospital in that city.

Among the new major projects, mention might be made of the additions to Lancaster Hospital, Saint John, N.B. The planning of the first part of an extension estimated at over \$2,000,000 was completed and a contract of approximately one-half this amount was let for construction.

Considerable progress was made on the new 300-bed hospital in the city of Quebec and the 100-bed extension to Queen Mary Hospital, Montreal, Que. Study was also made of the further adjustment still required in a number of active treatment hospitals.

While the demand for the use of the special facilities for convalescents in the Health and Occupational Centres had fallen off, good use was made of most of the accommodation so provided for the more ambulant type of older veterans. The problem of the provision of suitable accommodation for the older bedfast patients suffering from chronic disease is being faced.

Accommodation and movement of patients is shown by type of hospital for 1948 in Table 8.

\* Revised by the Department of Veterans Affairs.

### 8.—Accommodation and Movement of Patients in Veterans Affairs Hospitals, 1948

<sup>6</sup> Closed in January.<sup>7</sup> 570 doctors employed part time, 214 interns and residents

not included.

*Veteran Patients Classified by Status.*—As at Dec. 31, 1947 and 1948, the numbers of patients in Veterans' Hospitals were 7,180 and 7,291, respectively, classified according to status and treatment groups as follows:

Patient Strength	1947	1948	Treatment Groups	1947	1948
First World War.....	3,094	3,952	General.....	5,338	5,353
Second World War.....	3,735	2,925	Tuberculosis.....	869	805
Other.....	351	414	Mental.....	973	1,133

Clinical treatments in 1948 numbered 506,249 and in 1947, 760,333.

**National Defence Hospitals.\***—Table 9 shows accommodation and movement of patients in National Defence hospitals for the year 1948. All these hospitals are equipped with X-ray, laboratory and out-patient facilities and, except in the case of nine Army hospitals, physio-therapy services.

In addition, there are completely equipped 10-bed sick quarters (Royal Canadian Air Force) available for emergency use at Aylmer, Centralia and Clinton in Ontario, and at Edmonton and Calgary in Alberta. Hospitalization in these areas is carried out in existing Veterans Affairs hospitals or civilian hospitals. There were 239 admissions to the emergency centres, and 239 discharges during 1948, and approximately 35,000 out-patient treatments were given to Navy, Army and Air Force personnel, civilians, Eskimos and Indians in the Royal Canadian Air Force emergency sick quarters and medical inspection rooms. These are in addition to out-patient treatments given at the hospitals.

There are sick bays with 2 to 12 beds in each ship of the Royal Canadian Navy in commission. Suitable sick quarters are likewise provided in all Naval and Army establishments where hospitals do not exist.

\* Revised in the Department of National Defence.

<sup>1</sup> Integrated with Department of Veterans Affairs Hospital at same location.

<sup>2</sup> Opened June, 1948.

**National Health and Welfare Hospitals.**—Table 10 gives statistics of the hospitals administered by the Department of National Health and Welfare. The immigration detention hospital at Quebec, the largest of such institutions, has X-ray, laboratory and physio-therapy facilities as well as a social service and an out-patient department. The other hospitals are small and, with the exception of a clinical laboratory at Lunenburg and an out-patient department at Sydney, have no special services.

The low number of patient days at immigration hospitals, in contrast with the number of beds, is explained by the fact that these hospitals must maintain a sufficient number of beds to accommodate any sudden influx of patients whose treatment demands immediate quarantine.

**Subsection 3.—Statistics of Mental Hospitals**

At Dec. 31, 1947, there were 50,203 patients in mental institutions in Canada and 4,500 on parole or otherwise absent, making a total of 54,703. The normal bed capacity in these institutions was only 45,180, showing a seriously overcrowded

situation if the patient population on Jan. 1, 1947, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in New Brunswick, Quebec and the western provinces. Of the 50,203 resident patients in 1947, 37,801 were psychotic, 11,188 were mentally deficient 770 were epileptic and 444 mental cases were otherwise classified.

At Dec. 31, 1947, the number of resident patients in mental institutions per 100,000 population was 399.8 as compared with 399.5 at the same date in 1946, 396.5 in 1945, 388.0 in 1940, 352.8 in 1935 and 305.4 at June 1, 1931.

Data are not available to indicate to what extent the increasing trend of patients per 100,000 population is due to more complete diagnosis and care than formerly, or to what extent there is an actual increase in the proportion of the population requiring treatment for mental diseases.

## PART II.—PUBLIC WELFARE AND INCOME SECURITY\*

The major responsibility for public welfare in Canada rests traditionally with the Provincial Governments, and it is only in recent years, as a result of the new concept of social security, that income-maintenance programs other than those for special groups have been introduced at the federal level, e.g., Unemployment Insurance following amendment of the British North America Act, and Family Allowances. In 1944, the Department of National Health and Welfare was established to promote social welfare in matters over which the Federal Parliament has jurisdiction, except for services administered by other Federal Departments, such as the welfare of Indians and Eskimos and welfare services to veterans. Its duties include the administration of the Family Allowances Act, the federal aspects of the Old Age Pensions Act, and of the National Physical Fitness Act.

\* Revised under the direction of G. F. Davidson, Ph. D., Deputy Minister of Welfare.

## Section 1.—Federal Government Programs

### Subsection 1.—Family Allowances

The Family Allowances Act, 1944, was introduced as a basic social security measure designed to assist in providing equal opportunity for all Canadian children. The allowances are paid entirely out of the Federal Consolidated Revenue Fund, are not part of the taxable income and involve no means test.

Under the Act and amendments, allowances are payable in respect of every child below the age of 16 years who was born in Canada or has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made monthly, and normally to the mother although any person who substantially maintains the child may be paid the allowance on its behalf. The allowances are paid at the monthly rate of \$5 for each child under 6 years; \$6 for each child from 6 to 9 years; \$7 for each child from 10 to 12 years; and \$8 for each child from 13 to 15 years. The amendment of April, 1949, reduced the residence requirement from three years to one and removed the provision whereby allowances for the fifth and each subsequent child were reduced.

The allowances are paid by cheque, except for Eskimo children and a small group of Indian children for whom payment is made largely in kind because of lack of exchange facilities in remote areas and the need for education in the use of nutritive foods.

If it is satisfactorily shown to the authorities that the allowances are not being spent for the purpose outlined in the Act payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who, although she is under 16 years of age, is married. The Act provides that if any person is dissatisfied with a decision as to his right to be paid the allowance, or as to the amount of allowance paid, he may appeal the decision to a specially constituted tribunal.

Family Allowances are administered by the National Director of Family Allowances of the Department of National Health and Welfare through Regional Directors in offices located in each provincial capital. A welfare section in each Regional Office deals with welfare questions arising out of the administration of allowances. A Supervisor of Welfare Services serves as adviser to each Regional Director and reports through him to the Chief Supervisor of Welfare Services, who acts in a similar advisory capacity to the National Director. The actual preparation and issuing of the cheques is the responsibility of the treasury division of each Regional Office which reports to the Chief Treasury Officer of the Department of Health and Welfare.

The Regional Director for Yukon and the Northwest Territories, located at Ottawa, is responsible for payments to families in these areas. Close co-operation is maintained with the Department of Mines and Resources which is responsible for the welfare of Indians and Eskimos.

Payment of Family Allowances on behalf of children in Newfoundland began Apr. 1, 1949, on Newfoundland's entrance into Canadian Confederation.

<sup>1</sup> All figures except those in the last column refer to the month of March of the year indicated.

<sup>2</sup> Totals shown for year ended Mar. 31, 1946, cover 9 months because payment of Family Allowances did not begin until July 1, 1945. The totals shown for the years 1946, 1947 and 1948 are adjusted to account for overpayments and other corrections and therefore differ slightly from those in previous editions of the Canada Year Book.

<sup>3</sup> Data for July, 1949.

<sup>4</sup> Total for months of April to July, inclusive, 1949.

### Subsection 2.—Unemployment Insurance

In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XIX.

### Subsection 3.—National Employment Service

The National Employment Service is operated in conjunction with the Unemployment Insurance scheme. It is administered by the Commission through the employment and claims offices and supervised by the Federal Department of Labour. A description of the program is found in Chapter XIX.

### Subsection 4.—Veterans' Programs

*Veterans' Unemployment Assistance.*—The Department of Veterans Affairs does not place veterans in employment, but works closely with the Department of Labour in connection with veterans' problems. Out-of-work benefits are authorized in certain cases as outlined in Chapter XXVIII.

*Veterans' Pensions.*—Canadian pension legislation arising out of the First and Second World Wars has been discussed in previous issues of the Year Book (see pp. 759-760 of the 1943-44 Year Book; pp. 1139-1143 of the 1947 Year Book and pp. 1146-1148 of the 1948-49 Year Book). In this issue of the Year Book the account is outlined in Chapter XXVIII.

*Veterans' Allowances.*—In addition to war pensions, allowances are paid to certain non-pensionable veterans at 60 years of age, or earlier if the veteran is permanently unemployable, or to eligible veterans who, having served in a theatre of actual war, are incapable and unlikely to become capable of maintaining themselves because of economic handicaps combined with disabilities. These allowances are outlined in Chapter XXVIII.

*Veterans' Welfare Services.*—Welfare and rehabilitation services for veterans, as administered by the Department of Veterans Affairs, are outlined in Chapter XXVIII.

#### **Subsection 5.—Prairie Farm Assistance\***

The Prairie Farm Assistance Act, passed in 1939, and administered by the Federal Department of Agriculture, provides for direct money payments by the Federal Government, on an acreage basis, to farmers in areas of low crop yields in the Prairie Provinces and the Peace River District of British Columbia. The Act was designed to replace assistance in the form of relief and provides that payments be made to farmers under certain conditions and terms; it requires that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside in a special fund for the purposes of the Act.

If the farmer, who may be an owner or tenant, or a member of a co-operative farm association engaged in farming, is located in a crop-failure area, he may be awarded assistance on not more than one-half of the cultivated land or a maximum of 200 acres. The rates of payment range up to \$2.50 per acre.

From the inception of the scheme to Mar. 31, 1949, the total amount paid out under the Act was \$104,606,488.74. The amount collected under the 1 p.c. levy was \$38,634,389.32.

#### **Subsection 6.—Government Annuities†**

Under the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931) passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

A Canadian Government Annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year. Annuity contracts may be deferred or immediate. Under deferred annuity contracts purchase is by periodic or single premiums. Immediate annuity contracts provide immediate income.

The property and interest of the annuitant is neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded to the purchaser or his legal representatives with interest. Provision is made in the Act for group annuity contracts, whereby employers may contract

\* Contributed by the Department of Agriculture, Ottawa.

† Revised by the Government Annuities Branch, Department of Labour, Ottawa.

for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Many of the older members under group plans are now enjoying benefits under the Annuities Act.

From Sept. 1, 1908, the date of the inception of the system, up to Mar. 31, 1949, the total number of annuity contracts and certificates issued was 271,900. Of these, 29,608 have been cancelled (including 4,975 cancelled in 1948-49) leaving in effect on Mar. 31, 1949, 242,292 contracts and certificates. The total amount of purchase money received up to Mar. 31, 1949, was \$530,169,463.

Up to Mar. 31, 1949, 809 corporations, institutions and associations, as compared with 708 up to Mar. 31, 1948, had entered into agreements with the Government to purchase annuities. Under these agreements, as of Mar. 31, 1949, 113,645 employees or members were holding certificates for purchase of deferred annuities (as compared with 92,063 one year earlier). The number of certificates issued under groups in the year 1948-49 was 29,869 (as compared with 26,708 in the year 1947-48).

In April, 1948, the premium rates for new contracts were revised to provide for greater longevity of annuitants and were put on a 3 p.c. interest basis. It was decided to value annuities already being paid on the new mortality basis. Approximately \$10,000,000 additional reserve was required for this purpose on Mar. 31, 1949. This fact must be kept in mind when comparisons are made from Table 3.

Up to June, 1940, annuity payments were, with certain exceptions, exempt from taxation under the Income War Tax Act. Under contracts issued after that date, income was fully taxable until the Act was amended in 1945. Under that amendment, the capital element in contractual annuities issued since June, 1940, was declared exempt from taxation, the portion representing interest being subject to tax as income. The change applies to income of 1945 and subsequent years.

## Subsection 7.—Welfare Services for the Indian and Eskimo

**Indian Welfare.**—In the interests of national economy as well as for humanitarian reasons the Federal Government, through the Department of Mines and Resources, promotes at public expense on Indian reserves and throughout northern Canada a number of activities designed to promote the well-being of the Indian population. Those which might be interpreted as welfare projects include, besides general welfare, the payment of Family Allowances, the administration of the

Veterans' Land Act and the promotion of handicrafts. A description of the work done in the first classification will be found at pp. 1170-1177 of the 1948-49 edition of the Year Book; an account of what is done for the welfare of Indians follows.

In pursuance of the general welfare policy of improving housing on many reserves 750 new houses were built during the year ended Mar. 31, 1949, and 1,750 dwellings were repaired. Provision was made for the construction of an additional 850 houses in the fiscal year 1949-50, most of the labour to be supplied by the owners. Relief to the amount of \$893,161.71, in the form of a basic ration of groceries rather than money, was supplied to indigent Indians. Sick and aged indigent Indians on the recommendation of medical officers received special rations, including milk, fresh vegetables, fruit and eggs, particularly during periods of convalescence. In addition, 4,000 indigent aged Indians received cash allowances amounting to \$364,000. Progress was made in the co-ordination and promotion of adult and physical education, particularly in Alberta and British Columbia where courses in these fields were initiated in co-operation with provincial universities.

Family Allowances are paid to Indian women as they are to the other women of Canada. Experience has proved that, with few exceptions, the Indian mother has intelligently set Family Allowances aside for the purposes for which they are intended. Improved clothing and more adequate school lunches are a direct result. The amount spent in Family Allowances to Indians was \$3,500,000.

Under the Veterans' Land Act more than 1,000 Indian veterans have taken advantage of rehabilitation grants which have been invested in new houses, farms, trap-lines and commercial fishing projects.

**Eskimo Welfare.**—One of Canada's most challenging welfare-administrative problems is the task of assisting the Eskimos to adjust themselves to changing conditions, while at the same time attempting to preserve their racial characteristics and personality traits. This problem calls for the continued co-operation of the Royal Canadian Mounted Police, missionaries, traders, medical personnel and others who have contact with these interesting and wholesome people. The Department of Mines and Resources is responsible for general welfare and educational services, including the payment of Family Allowances.

For many years the administration of Eskimo affairs was conducted largely through the Eastern Arctic Patrol, the annual visit of administration, medical, and scientific personnel to posts in the Arctic and Sub-Arctic. Throughout the year ended Mar. 31, 1949, local administration was carried on by the Royal Canadian Mounted Police. During periods of need, when game and fur are scarce, the police are authorized to ensure that no one suffers any undue hardship. Recently, however, more frequent inspection trips by boat and air afford a closer liaison between the departments and their local representatives, and a correspondingly more efficient administration of Eskimo affairs.

With the inception in 1945 of the Family Allowances Act, which included authorization for the payment of allowances to Eskimo children, the Royal Canadian Mounted Police were appointed District Registrars for Family Allowances. Since

that time, the assistance rendered through the payment of Family Allowances has proved of great benefit to the native people. Eskimos do not receive Family Allowances by cheque, but are paid in kind, according to an authorized list of goods restricted to items which will benefit growing children. Large quantities of powdered milk and other prepared foods are among the commodities supplied.

The payment of \$8 per month in goods to all Eskimos over 70 years of age has recently been instituted.

The Department of Mines and Resources has initiated a long-term educational plan to supplement the work that has been carried on by the various missionary societies.

Sources of employment other than hunting and trapping are gradually being opened to the Eskimos. Large reindeer projects have been established for some time in the Western Arctic and others are being considered for the Eastern Arctic. Eskimos have found lucrative work at establishments of the white man, and their opportunities for advancement should increase with improved education and experience.

## Section 2.—Federal-Provincial Programs

### Subsection 1.—Old Age Pensions and Pensions for the Blind

Old Age Pensions and Pensions for the Blind which are paid jointly by the Federal and Provincial Governments are authorized by the Old Age Pensions Act, 1927, and amendments. The Amendment of 1937 authorized pensions for the blind. The original Act and amendments up to 1947 are outlined on pages 258-260 of the 1948-49 Year Book. The amendment of Apr. 30, 1949, effective May 1, 1949, raised the maximum monthly pension to which the Federal Government will contribute.

Old Age Pensions became effective in the different provinces on various dates between 1927 and 1936 (see Table 5, p. 273). With the entry of Newfoundland into Confederation on Mar. 31, 1949, the Newfoundland Government entered into an agreement with the Federal Government for the joint payment of Old Age and Blind Pensions commencing Apr. 1, 1949. Payment of pensions in the Northwest Territories under the Federal Act began in 1929, and Yukon signed an agreement with the Federal Government for payment of both Old Age and Blind Pensions effective Apr. 1, 1949.

Old Age Pensions up to a maximum of \$40 per month may be paid to persons aged 70 and over whose annual income, including pension, is not more than \$600 for a single person, \$1,080 for a married person, or \$1,200 if married to a blind person. Pensions are paid to blind persons 21 years of age or over, whose maximum annual income, including pension, is not more than \$720 for a single person, \$920 if there is a dependent child, or in the case of married persons, if the total income of the couple including pension, is not more than \$1,200 or \$1,320 if both are blind. The exact pension payable in each case depends on the amount of outside income and resources of the pensioner. To be eligible for the Old Age Pension or a Pension for the Blind, the applicant must have resided in Canada for 20 years immediately preceding the proposed commencement of pension, or if absent from Canada during that time must have had a previous residence equal to twice the length of the period of absence.

Old Age Pensions and Pensions for the Blind are not paid concurrently, or together with an allowance under the War Veterans' Allowance Act, 1946, or to an Indian as defined by the Indian Act, and Pensions for the Blind are not paid

together with a pension for blindness under the Pension Act. As of Mar. 31, 1949, 251,865 persons, representing approximately 43 p.c. of the total population aged 70 or over were in receipt of Old Age Pensions, and Pensions for the Blind were paid to 9,567 persons.

The Federal Government contributes, in respect of each person in receipt of pension, a sum not exceeding 75 p.c. of \$40 monthly or of the monthly amount paid by the province, whichever is less, so that while the province may pay a higher maximum pension within the income limits fixed by the Act, the Federal contribution is payable only in respect of an amount of pension up to \$480 annually. Pensions are paid by the provinces, with Federal Government reimbursement being made through the Department of National Health and Welfare. The provinces are responsible for payment of their administrative costs.

Since 1942, certain provinces have paid supplementary allowances in addition to pensions. As of Apr. 1, 1949, the following monthly rates were in effect: British Columbia, \$10; Alberta, \$10; Saskatchewan, up to \$5; Manitoba, up to \$5; Nova Scotia, up to \$5; in Ontario the supplementary allowance was one-twelfth of the basic Federal-Provincial pension, plus an amount up to \$7.50. Following the 1949 increase in pension, some provinces ceased to pay the supplementary allowance. As of June, 1949, the following provinces were paying the supplements: British Columbia, \$10; Alberta, \$7.50; Saskatchewan, \$2.50\*.

Implementation of the Old Age Pensions Act in any given province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. Each provincial plan must be submitted to the Governor in Council for approval and may not be changed without consent. Administrative responsibility for the program is vested in the individual province where a Board or Commission acts as the pension authority. The Federal aspects are administered by the Old Age Pensions Division of the Department of National Health and Welfare.

\* Yukon also pays a supplementary allowance. The rate since July 1, 1949, is \$10 monthly.

## Subsection 2.—National Physical Fitness Program

Under the National Physical Fitness Act of 1943 a joint Federal-Provincial program is carried on to improve the physical and mental fitness and the cultural development of the Canadian people. The program is designed primarily to assist and stimulate local community activity, with the Federal and Provincial Governments having as their main concern the initiation and provision of services requested by the community.

Through the Act, Federal grants totalling \$225,000 annually, paid on a matching per capita basis, are made available each year to those provinces which undertake to promote a fitness and recreational program as provided in the Act. With the entry of Ontario in April, 1949, eight provinces participate in the program. On Newfoundland entering Confederation, in 1949, special provision was made for an additional \$7,000 to be made available for the new Province in the event that it chose to participate.

The National Council on Physical Fitness, which is composed of not fewer than three nor more than ten members, appointed by the Governor in Council, was established under the Act. The National Council which meets at least semi-annually, serves in an advisory capacity to the Minister of National Health and Welfare and provides liaison between the different levels of government and with

national voluntary organizations actively engaged in the fitness and recreation field. Some participating provinces have established similar advisory bodies; others utilize interdepartmental committees.

The Act is administered by the Physical Fitness Division of the Department of National Health and Welfare. In addition to administering the grants to the provinces, the Division performs the administrative work of the National Council of Physical Fitness, co-operates with other Federal Departments, and with national agencies and organizations, collects and distributes information originating in this and other countries, interprets the national program of fitness through publications and reports, and is concerned with the conducting of research, experiments and demonstrations.

Provincial programs are administered by the Departments of Education in all provinces except Nova Scotia and Manitoba where they are the responsibility of the Department of Public Health and the Department of Health and Public Welfare, respectively. Saskatchewan and Manitoba have passed provincial physical fitness legislation; programs in other provinces are operated under departmental regulation. As the actual carrying out of fitness and recreation projects is for the most part a local responsibility the provincial program is organized with a view to strengthening and aiding the community, and agencies active in the field. The underlying policies are: the development of a program of fitness in relation to the needs and determined priorities of the local community; the development of both volunteer and paid leadership through the conduct of training courses and, in some instances, the payment of salaries; co-ordination and extension of existing agencies, with programs being initiated only where agencies are not available to undertake them, and in certain provinces the provision of financial aid to local programs approved by the province.

Liaison with other countries was considerably extended in 1949, and particularly with nations of the Commonwealth, as a result of the International Congress for Physical Education, Recreation and Rehabilitation which was held at London in July, 1948. In Canada increasing co-operation between national organizations interested in fitness programs was achieved through the joint meetings held in April, 1948, by the National Council on Physical Fitness and the Canadian Association for Health, Physical Education and Recreation, and by the convening of the first National Conference of Sports Governing Bodies.

The development of the program in all provinces has been characterized by an emphasis on community recreational planning which is particularly Canadian in character. An important trend has been the great increase in co-operative effort, through the donation of labour by members of the community for construction projects and the sharing between small centres of facilities and equipment. Shortage of trained personnel remained the most serious obstacle to the expansion of programs. To assist in overcoming this shortage the Federal Government in March, 1949, provided a number of scholarships, to be awarded on the recommendation of the National Council, for the post-graduate training of fitness and recreational personnel.

Films are used extensively for instructional purposes. Those produced to further the fitness movement have included *Fit for Tomorrow*, *Fitness is a Family Affair* and *When all the People Play*. In addition, films from all sources, approved by national appraisal committees composed of experts in fitness and recreation, are made available for showings throughout the country through the preview film library service maintained by the Physical Fitness Division, which circulates them to the provinces periodically on a "preview with a view to purchase" basis.

### 7.—Federal Grants Available and Amounts Paid Under the National Physical Fitness Act, 1944-49

Province	Grant Available, 1949-50	Total Amount Paid 1944-45 to 1948-49	Province or Territory	Grant Available, 1949-50	Total Amount Paid 1944-45 to 1948-49

<sup>1</sup> Did not participate in program.

<sup>2</sup> Did not enter program until April, 1949.

### Subsection 3.—Training Programs

Under the Vocational Training Co-ordination Act of 1942 and amendments, the Federal Department of Labour, in co-operation with the Provincial Governments, carries on various training projects. Details of these schemes will be found in Chapter XIX.

## Section 3.—Provincial Programs

### Subsection 1.—Mothers' Allowances

Nine provinces have statutory provision for allowances to enable certain needy mothers to remain at home to care for their dependent children. The first Act was passed by Manitoba in 1916, and four other provinces enacted similar legislation between 1917 and 1920. The Nova Scotia and Quebec Acts came into effect in 1930 and 1938, respectively; the New Brunswick Statute of 1938 became effective in 1943; and the Prince Edward Island Act of 1949 became effective July 1, 1949. While Newfoundland does not have any comparable legislation, some assistance is given to needy widows, dependent children and orphans.

The total cost is paid from provincial treasury funds except in Alberta, where a 1949 amendment reduced the contribution required from the municipality of residence from 25 to 20 p.c. of the allowance. In Quebec, the provision permitting a levy of not more than 5 p.c. of an allowance on a municipality has not been implemented.

There are two conditions of eligibility required by all provinces: means test and residence. The amount of outside income and resources allowed varies from province to province. Residence in the province at the time of application is required by each province, and the necessary period of previous residence varies from one year in Saskatchewan, to two years in Ontario and Manitoba, three years in British Columbia, New Brunswick, Nova Scotia and Prince Edward Island, and five years in Quebec. The Alberta Act requires the husband to have had his home in the province at the time of his death, his committal to an institution, or his desertion. In all provinces the child or children must live with the recipient of the allowance.

Nationality is an important condition of eligibility in all provinces except Alberta, Saskatchewan and Ontario. In Quebec the mother either must possess Canadian citizenship by birth or must have been a Canadian citizen for 15 years or must be the wife or widow of a Canadian citizen. The other provinces either require that the applicant be a British subject or the wife or widow of a British subject, or that her child be a British subject. In Nova Scotia the applicant herself must be a British subject and in Prince Edward Island, New Brunswick and Mani-

toba, the child is eligible if he is a British subject even if the mother is not. In British Columbia a mother may be eligible if she is or was a British subject by birth or naturalization. In New Brunswick, Nova Scotia, and Prince Edward Island an allowance may not be paid to an Indian as defined by the Indian Act of Canada.

Since the introduction of the legislation there has been a general extension of coverage. As of May, 1949, an applicant must be a widow or her husband must be mentally incapacitated or, except in Alberta, he must be totally and permanently disabled. Total and permanent physical disability is defined in various ways: for example, in British Columbia and Quebec the physical disability must be such that it may reasonably be expected to last at least one year, and in Saskatchewan the specified period is nine months or more. All provinces except Alberta consider a mother eligible for an allowance if her husband is receiving treatment for tuberculosis.

Deserted wives who meet specified conditions are eligible in all provinces except Nova Scotia, but the period which must elapse after desertion varies from one to seven years. Mothers who have been divorced or legally separated from their husbands are eligible in British Columbia, Manitoba and Ontario and a divorced mother may be paid an allowance in Saskatchewan. Subject to certain conditions, foster mothers caring for children whose parents are dead or disabled are eligible for allowances. In Saskatchewan when the mother is deceased or in a mental institution or sanatorium, the allowance may be paid to the father if he is incapacitated and living at home with the children. All provinces grant allowances in respect of legally adopted children but in some cases the child must have been adopted by the husband and wife jointly. In Manitoba, Saskatchewan, Alberta and British Columbia, allowances are paid for children born out of wedlock if certain conditions are fulfilled.

Since the 1949 amendment to the Nova Scotia Act, mothers of one or more children are eligible in all provinces. Allowances may be paid in respect of children under the age of 16, except in Manitoba where the age limit is 15 years. In special circumstances the age limit is extended: Saskatchewan, Ontario, Quebec and New Brunswick continue the allowance in respect of a child who has reached 16 years of age and is at school until the end of the academic year; British Columbia and Alberta pay an allowance in respect of a child who is attending school until he has reached 18 years; British Columbia and Manitoba pay allowances in respect of children under 18 who are mentally and physically handicapped, and Quebec and Saskatchewan continue the allowance until a child is 19 or 21 years of age, respectively, if he is physically or mentally unable to work. Five provinces also make provision in the Act or Regulations for the payment of allowances to needy mothers who are not strictly eligible under the terms of the Act. In other provinces cases of this kind are generally cared for under social assistance or relief.

In all provinces the Act is administered by Public Welfare authorities and most provinces have a Board or Commission to make decisions regarding eligibility and amounts of allowance to be paid under the Act. In most cases Advisory Boards or local advisory committees are appointed to make recommendations regarding the operation of the Acts.

The legislation in British Columbia and Alberta provides for reciprocal agreements with other provinces for the payment of allowances but no such agreements are in effect.

In all provinces the amount of allowance granted is fixed by the administrative authority on a means test basis. Table 8 shows the maximum monthly rates of allowance in each province. Table 9 gives statistics for the individual provinces providing mothers' allowances.

## 8.—Maximum Monthly Rates of Mothers' Allowances as of May, 1949

NOTE.—Actual rates are set after consideration of circumstances of each applicant.

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family	Supplementary
P. E. Island <sup>1</sup>	\$25.00	\$5.00	No additional allowance granted.	\$50.00	None granted.
Nova Scotia	No set maximum; rates based on average family income for community in which family lives.		No special provision; included in budget on which allowance is based.	\$80.00 (Minimum \$45.00)	None; fuel and winter clothing included in budget.
New Brunswick	\$27.50	\$ 7.50	No additional allowance.	\$60.00	Director may grant an additional \$7.50 for rent if circumstances require it but only if allowance paid is below maximum; fuel and winter clothing included in allowance.
Quebec	\$30.00 (population under 5,000) \$35.00 (population 5,000 or over)	\$1.00 for 2nd, 3rd, 4th, 5th. \$2.00 for 6th, 7th. \$3.00 for each subsequent child.	\$5.00	No amount set. (Minimum \$5.00)	\$5.00 if recipient physically or mentally unable to work; fuel and winter clothing included in allowance. Allowance may be continued for short periods when father on leave of absence from a mental hospital or recovered from tuberculosis but still unable to work full-time.
Ontario	\$50.00 for mother and 1 child. \$24.00 for foster mother and 1 child.	\$10.00 \$43.00 foster mother and 2 children, with \$10.00 for each additional orphan child.	\$10.00	No amount set.	\$10.00 where need is apparent to the Commission. Allowance for fuel based on size of home and cost of coke from Oct. 1 - May 31 of previous year. Winter clothing included in allowance and/or supplementary allowance.

8.—Maximum Monthly Rates of Mothers' Allowances as of May, 1949—concluded

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family	Supplementary
Manitoba	\$48.00—includes food, clothing and operating expenses.	\$9.00 for child aged 1-6 years. \$11.75 for child aged 7-11 years. \$14.00 for child aged 12-14 years.	\$15.75	\$137.00	Up to \$25.00 if necessary; fuel allowance granted; winter clothing included in budget.
Saskatchewan	\$25 for mother and 1 child. \$15 for guardian and 1 child.	\$10 for 2nd. \$5 for each subsequent child. \$75 for a mother and ten or more children.	\$10.00	\$85.00	Local municipality may grant supplementary aid under Social Assistance program. Costs shared equally by the Province and municipality.
Alberta	\$35.00	\$15 for 2nd. \$10 for 3rd, 4th. \$8 for 5th. \$7 for 6th. \$5 for 7th, 8th, 9th or more.	No additional allowance.	\$100.00	Up to \$10.00 a month may be granted, the cost to be paid entirely by the Province. Assistance may be given, if needed, from a Benevolent Fund made up of moneys from anonymous donors. Fuel and winter clothing included in allowance.
British Columbia	\$42.50 plus \$7.50 from Social Allowance funds, less \$5.00 if family owns home.	\$7.50 plus \$1.00 from Social Allowance funds.	\$7.50 plus \$1.00 from Social Allowance funds.	Maximum set but no limit to number who may benefit.	Extra expenditures, such as needed repairs to the home and loss of possessions through fire, can be met through Social Allowance funds. No special fuel allowance. Nutrition allowance available for tuberculosis patients and families.

<sup>1</sup> The Prince Edward Island Mothers' Allowances Act did not come into effect until July 1, 1949.

## Subsection 2.—Welfare Services

Provincial welfare services generally are administered by Provincial Welfare Departments which also have a supervisory authority over municipal welfare programs. Local voluntary agencies are in most cases incorporated under provincial law. The following outline covers provincial public welfare services, exclusive of Old Age Pensions, Pensions for the Blind and Mothers' Allowances which are treated

separately, that is, measures of child care and protection, care of the aged, social assistance or relief and special services. The medical services available to recipients of social assistance and aged persons are described in Health Activities of the Provincial Governments, Part I, Section 2, pp. 240-250.

### Newfoundland

Prior to the union of Newfoundland with Canada, Mar. 31, 1949, public welfare services were administered by the Department of Public Health and Welfare operating under the Health and Public Welfare Act of 1931 and amendments. With the entry of Newfoundland into Confederation two separate portfolios were established for Health and Welfare.

*Child Care and Protection.*—With the exception of orphanages, child welfare has developed as a public service. Regional Officers, acting under the Director of Child Welfare, administer the Welfare of Children Act, 1944, which embraces legislation dealing with neglected children, children of unmarried parents, adoptions, mentally defective children, juvenile delinquents and training schools. The Child Welfare Division pays for the maintenance of those neglected children who, by court order, are made wards of the Director and are placed in foster homes. The Division operates an Infants Home providing short-term care for children up to two years of age. Orphanages are specifically outside the jurisdiction of the Welfare of Children Act and are administered by the religious denominations, with government subsidies at the rate of \$100 per year for each child admitted.

By statute, the Director of Child Welfare is Judge of the Juvenile Court, which is located at St. John's. The Division also maintains a Boys' Home and Training School and a Girls' Home and Training School with accommodation for 164 and 17, respectively.

*Care of the Aged.*—The Department operates at St. John's a Home for the Aged and Infirm which has a bed capacity of 147.

*Social Assistance.*—At the time of union with Canada allowances on a limited scale were being paid to needy widows, orphans and the infirm, and assistance provided for the able-bodied unemployed as well as for those unable to work. The costs of this aid and of administration were borne entirely by the central government. Old Age Pensions were formerly paid to needy persons who were 75 years of age or over, or to the widow of a pensioner if she was 65 at the time of her husband's death. This was superseded in April, 1949, by the joint Federal-Provincial program discussed in Part II, Section 2, pp. 271-274.

### Prince Edward Island

Public welfare services are administered by the Department of Health and Welfare. The Province constitutes a single welfare unit, with no geographic or political division into municipalities, and is responsible for social aid except in the city of Charlottetown and the seven incorporated towns which are charged with the care and maintenance of their own needy residents.

*Child Care and Protection.*—Under the Children's Act, the Director of Child Welfare is responsible for the placement in boarding homes, foster homes or institutions, of neglected or delinquent children appearing before the juvenile courts. Two Children's Aid Societies operate under the Children's Act and efforts are being made to reorganize the one in Charlottetown for more effective service. Provincial grants are made to these Societies and to the two private orphanages, one Protestant and one Roman Catholic.

*Care of the Aged.*—The aged and infirm are cared for in the Falconwood Mental Hospital and Provincial Infirmary. Additional accommodation is planned for 100 old people in a building reconverted for the purpose.

*Social Assistance.*—The Department provides relief in rural areas, and assists Charlottetown and the incorporated towns by a grant of 50 p.c. of accepted social assistance payments.

### **Nova Scotia**

Public welfare services are administered by the Department of Public Welfare.

*Child Care and Protection.*—The Child and Family Welfare Branch is responsible for the administration of the Adoption Act; assistance to and supervision of the 12 Children's Aid Societies and, in unorganized districts, carrying out the duties normally delegated to the Societies; inspection of all child-caring institutions and reformatories; the Nova Scotia Training School for mentally defective children; the Nova Scotia School for Boys which cares for delinquent boys; and operation of six juvenile courts together with supervision of their probationary staff.

Wards of the Children's Aid Societies are placed in foster homes when possible, or in child-caring institutions. The Province bears 40 p.c. of maintenance costs up to \$5 per week, the municipality of residence paying the remainder. The Province may pay an extra \$3 at the discretion of the Minister.

The municipality pays \$175 and \$200 per annum, respectively, for children in the Nova Scotia School for Boys and in the Nova Scotia Training School, all other expenses being borne by the Province. Financial provision for children in private reformatories is at the rate of \$175 per annum from the municipality and \$400 from the Province.

*Care of the Aged.*—Homes for the Aged are operated by municipalities and religious and private bodies under provincial inspection, with no provincial or Federal support other than the Old Age Pension described in Part II, Section 2, pp. 271-274. Old Age pensioners boarding in these homes may pay their pensions directly to the institutions or, if the pensioner is incapable of managing his own affairs, the pension may be paid to the institution by the Department.

*Social Assistance.*—Relief to unemployables is a local responsibility.

### **New Brunswick**

Public welfare services are administered by the Department of Health and Social Services.

*Child Care and Protection.*—Responsibility for protection and placement services is largely delegated to the 17 Children's Aid Societies, one in each county and one in each of the cities of Fredericton and Moncton. Orphanages are operated by religious, private, or in certain cases, municipal organizations. With a few exceptions, boarding homes for children must be licensed and are subject to provincial inspection, as are all child-caring institutions. The Province and the municipality of residence each pay \$225 a year towards the maintenance of every child committed to any institution or home. The Department may place blind or deaf-mute children in the School for the Blind and School of Deaf Mutes at Halifax, N.S.

*Care of the Aged.*—Homes for the Aged are operated under municipal, religious, fraternal, or private auspices. They are subject to provincial inspection but receive no financial support from the Province.

*Social Assistance.*—Relief to unemployables is a local responsibility.

## Quebec

Major responsibility for the administration of public welfare services is shared by the Department of Health and the Department of Social Welfare and Youth. The latter is responsible for preventive and rehabilitative work among juvenile delinquents, grants subsidies to recreation groups, camps, sports, parks and playgrounds, and administers Old Age Pensions and Needy Mothers' Assistance.

The Department of Health administers the Public Charities Act which embodies the Provincial Government policy of granting subsidies to religious and private institutions wherever they exist rather than creating public services. Under the Act, provision is made for subsidies to institutions on a per diem basis, with the Province paying one-third of the cost of maintenance of indigent persons admitted, the municipality of residence paying one-third and the institution the other third.

*Child Care and Protection.*—Needy or abandoned children are cared for largely in institutions such as orphanages, industrial schools, nurseries, and other Homes assisted under the Public Charities Act. There is a trend towards foster-home care and the increasing use of social-work methods in institutions. Training and rehabilitation programs are carried on in the six industrial schools and four reform institutions to which children are committed. A Child Guidance Clinic in the Montreal Juvenile Court operates directly under the jurisdiction of the Minister of Social Welfare and Youth as part of the provincial program for the prevention of juvenile delinquency.

Children who have not been infected but who have been exposed to tuberculosis are placed with rural families and supervision of their health and welfare is maintained by the Department of Health in co-operation with local doctors and clergy.

*Special Services.*—Aid to Youth, a program under the Department of Social Welfare and Youth, provides vocational guidance and scholarship grants to young people. The Department also sponsors some 50 specialized training schools and correspondence courses.

*Care of the Aged.*—Institutional care for indigent old people is provided under the terms of the Public Charities Act.

*Social Assistance.*—Relief to families is not provided in Quebec but institutional care for indigents is available under the terms of the Public Charities Act. The Department of Colonization operates a program whereby needy families are settled on the land in newly opened districts, and are supervised and granted financial aid until they become self-supporting.

## Ontario

Public welfare services are administered by the Department of Public Welfare. Legislation in 1948 authorized single municipalities, districts, or groups of municipalities or districts, to join together, to establish welfare units for more efficient administration, and provided for provincial payment of 50 p.c. of administrative costs.

*Child Care and Protection.*—The Children's Aid Branch of the Child Welfare Division is responsible for the administration of the Children's Protection Act, the Children of Unmarried Parents Act and the Adoption Act, and for supervision of the 53 Children's Aid Societies and all institutions for children in the Province. Under a 1949 amendment to the Children's Protection Act, the Provincial Government is enabled to reimburse municipalities against which an order has been made

for the maintenance of children committed to the care and custody of a Children's Aid Society in the amount of 25 p.c. of the net municipal expenditure; and, by a further amendment, to make grants to Children's Aid Societies of 25 p.c. of the amount they raise through private campaigns for funds. These grants are in addition to the appropriate token grants based on the grading status of a Society.

The Day Nurseries Branch of the Division administers the Day Nurseries Act, 1946, which provides for the establishment of day nurseries in Ontario. Under the Act, any municipality establishing a day nursery may receive a provincial contribution equal to one-half its expenditures on operation and maintenance. The Act also provides for the supervision of all day nurseries throughout Ontario.

The British Child Guests Branch continues the supervision of the British children evacuated from the United Kingdom during the Second World War who still remain in Ontario.

*Care of the Aged.*—Homes for the Aged are operated under provincial supervision by counties, cities, districts and religious and benevolent societies. The Homes for the Aged Act passed at the 1949 session of the Legislature made it obligatory for both counties and municipalities to establish Homes for the Aged or to make arrangements with other municipalities for their care. Municipality is defined as a city, county or separated town. The Act also made additional provincial assistance available by enabling the Provincial Government to pay 50 p.c. of the construction cost of a new home or of additions or extensions to existing homes. In Districts, the Provincial Government is enabled to pay that portion of the cost of construction which may be allocated to unorganized territories. Under the new Act, also, the Provincial Government may pay 50 p.c. of the net cost of maintenance of such an institution. Plans for any new construction must be approved by the Minister of Public Welfare.

All private institutions for the care of the aged operate under the Charitable Institutions Act. This Act has not been changed but additional indirect assistance has been given many institutions by applying the per diem rate allowed under the Act to all old age pensioners resident in such institutions.

*Social Assistance.*—Regulations under the Unemployment Relief Act authorize contributions on the part of the Department of Public Welfare toward the alleviation of distress of unemployable persons. Schedules of assistance are provided in the regulations and are adjusted from time to time in accordance with changing food prices. Municipalities are reimbursed 50 p.c. of their expenditure, but in the unorganized areas the Province administers and pays the total cost of aid rendered.

*Assistance to Veterans.*—Through the Soldiers' Aid Commission, advice and emergency assistance is extended to ex-service men of the First and Second World Wars and to their families.

## Manitoba

Public welfare services are administered by the Public Welfare Division of the Department of Health and Public Welfare.

*Child Care and Protection.*—In unorganized territory basic child care and protection services are provided by the Division of Public Welfare. In most of the municipally organized areas, these services are maintained by four undenominational Children's Aid Societies which receive substantial provincial support under a new system of matching grants. Payments are based on a formula of the number and cost of social workers per 100,000 of population in a representative area where the

Province provides child welfare services. Under agreement between the societies and the Government, payment is made conditional on the provision of a basic level of service and the collection of equivalent voluntary contributions.

Heretofore the municipality of residence was responsible for the total cost of maintenance of wards. Beginning Jan. 1, 1949, the Province assumed a portion of these costs by reimbursing municipalities on a *pro rata* basis from a \$300,000 fund provided for the purpose.

The Child Welfare Division provides foster-home care and supervision for mental defectives placed under the custodianship of the Director. The Broadway Home at Winnipeg, an advanced training school for mentally defective girls, comes under the joint direction of the Divisions of Public Welfare and Psychiatry.

*Care of the Aged.*—All institutions and nursing homes caring for the aged and infirm are supervised and licensed by the Provincial Department of Health and Welfare under Public Health Act Regulations. The largest of these Institutions, with 420 beds, accepts only applications made through public authorities where a definite guarantee of maintenance is provided by either the Province or the municipality. Other than this no financial assistance is given by the Province.

*Social Assistance.*—The Province assumes responsibility for social assistance or general relief in unorganized territory and for assistance to non-resident transients. Responsibility for other general assistance rests with the municipality of residence.

During the year, agreements were completed with the Federal Department of Labour for the joint financing of a provincial program of assistance to indigent persons of the Japanese race settled in Manitoba by the British Columbia Security Commission, and for a program of medical assistance to needy displaced persons brought to Manitoba by the Federal Department of Labour. The cost of this program of medical assistance is to be shared equally by the Federal and Provincial Governments.

### Saskatchewan

Public welfare services are administered by the Department of Social Welfare and Rehabilitation.

The Department is divided into four main branches: Child Welfare, Old Age Pensions, Social Aid and Corrections; it operates the Home for the Aged and Infirm, and the Regina Nursing Home. The Social Welfare Board established by the Social Welfare Act, 1945, consists of the Deputy Minister as Chairman, and the Directors of the four major branches; it supervises the granting of all forms of assistance provided by the Department and acts in an advisory capacity to the Minister of Social Welfare.

*Child Care and Protection.*—The Child Welfare Act and the Education of Blind and Deaf Children Act are administered by the Child Welfare Branch and involve supervision of all child welfare services in the Province. When possible, children are placed in foster homes, and in some cases older children are placed on farms under wage agreements. The Branch operates five child-caring institutions for the care of wards until they can be returned to their parents or placed in foster or adoption homes. A portion of the maintenance costs of all wards is paid by the municipality of residence, except for children born out of wedlock where an attempt is made to recover from the father. Financial responsibility, however, is limited so that it will not exceed one mill of the municipality's tax rate, and ceases when the child reaches 16 years of age.

*Correctional Services.*—Since April 1, 1947, responsibility for administration of the provincial gaols has rested with the Corrections Branch of the Department. The Branch is also responsible for the Industrial School for Boys, the four provincial penal institutions, and probation services. Provincial correctional services are being revised to provide for better segregation and for adequate vocational training and social case work.

*Care of the Aged.*—The Department operates two Homes for the Aged and Infirm which provide accommodation for 175 persons. Plans are under way for an additional home to accommodate another 150 to 200 persons. The Social Welfare Act provides for the licensing and supervision of all privately operated homes.

*Social Assistance.*—The needs of indigent persons are met by the Social Aid Branch in co-operation with the various municipal units; the Province contributes 50 p.c. of the cost of food, clothing and shelter furnished by municipalities to needy residents, employable and unemployable. The entire cost of assistance to transient indigents is borne by the Province. Through the Department of Public Health needy mothers may receive grants not exceeding \$25 prior to or immediately following the birth of a child.

*Métis Rehabilitation.*—The Branch operates a farm where the Métis—persons of mixed Indian and White blood who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work, and conducts two schools for Métis children.

*Special Services.*—A Division of the Branch provides training and placement services for the handicapped and crippled; one-half the cost of this training is borne by the Province, one-half by the municipality of residence.

## Alberta

Public Welfare measures are administered by the Department of Public Welfare. The Department is divided into seven main branches: Public Assistance, Child Welfare, Mothers' Allowances, Old Age Pensions, Rehabilitation, the Single Men's Division and the Veterans Welfare Commission.

*Child Care and Protection.*—The care of children who become wards of the Government by neglect, delinquency, or indenture and agreement is under the exclusive control of the Child Welfare Commission. Children may be placed in foster homes, paid boarding homes, or institutions, depending upon the individual circumstances. Financial responsibility for children who are made wards of the Government and for whom a maintenance order has been issued by the Court rests with the municipality of residence. However, the Public Welfare Assistance Act, 1949, authorized provincial grants of up to 60 p.c. of the cost of the maintenance of these wards. Reform schools for incorrigible delinquent children are maintained, and other delinquent children are placed in private homes under the supervision and inspection of the Home Investigating Committee of the Department.

*Care of the Aged.*—The Home for Aged or Infirm Act, 1945, provides for the payment of grants to municipalities of up to 50 p.c. of the cost of maintaining aged or infirm persons resident in licensed homes.

*Social Assistance.*—The Province pays the total cost of assistance to indigent families who have no municipal residence, and to indigent families in unorganized districts. The Public Welfare Assistance Act, 1949, authorized the Province to

issue grants to municipalities of an amount up to 60 p.c. of the cost of maintenance of indigent residents. The Maternal Welfare Act provides for a grant of up to \$15 to needy mothers prior to or immediately following the birth of a child.

The Bureau of Public Welfare operates a rehabilitation service to families by settling them on suitable farm lands. The Single Men's Division maintains four hostels, one each at Edmonton and Calgary and two in rural areas, to care for destitute single homeless men without permanent municipal domicile. Single ex-service men are cared for at Calgary and Edmonton without being institutionalized. The Province assumes the cost of these projects.

*Métis Rehabilitation.*—The rehabilitation of the Métis is the responsibility of the Métis Rehabilitation Branch and has been carried out by the setting aside of tracts of land as Métis Settlement Areas, where settlers have exclusive fishing, hunting and trapping rights and where they are encouraged to engage in lumbering, agriculture and stock-raising. Educational and social services are provided, and government-operated stores sell goods at cost price.

### British Columbia

Public welfare services are administered by the Social Welfare Branch of the Department of Health and Welfare.

*Organization and Field Service.*—The Province is divided for administrative purposes into five Regions with 27 District Offices. This decentralized administration allows for regional payment of social allowances and professional supervision of staff. Generalized field service to all persons receiving assistance is given by provincial social workers in the territory to which each is assigned.

Under the Social Assistance Act, cities and municipalities of over 10,000 population must have their own Social Welfare Departments to administer the Social Assistance Act and to give case-work services to old age pensioners and mothers' allowance recipients. The Province pays 50 p.c. of the salaries of municipal social workers, or where more than one is needed, matches the municipal appointees, worker for worker. Smaller municipalities may either have their own Social Welfare Departments or pay the Province 15 cents per capita each year for the services of the Social Welfare Branch. There are five municipalities with only one social worker and eight with an amalgamated staff, the remainder choosing the 15 cents per capita alternative.

The Province reimburses the municipalities 80 p.c. of the cost of all forms of social assistance with the exception of Old Age Pensions, Pensions for the Blind and Mothers' Allowances to which the municipalities do not contribute. Nursing-home or boarding-home costs over and above the pension or allowance are shared on an 80-20 provincial-municipal basis.

*Child Care and Protection.*—The administration of the Protection of Children Act, the Adoption Act, the Children of Unmarried Parents Act and the placement of children in foster homes is carried on by the Child Welfare Division, except at Vancouver and Victoria where Children's Aid Societies are located. Administration of the Boys' and Girls' Industrial Schools, family case work and rehabilitative supervision of all boys and girls who have been treated at the schools is carried on in co-operation with the Juvenile Courts.

*Care of the Aged.*—The Provincial Home is operated for the care of aged men. Several cities and municipalities also operate Homes for the Aged; grants of 33 p.c. of the capital cost of construction are made by the Province.

*Social Assistance.*—The Family Division administers the Social Assistance Act which provides for the granting of social allowances to needy individuals or families, counselling services to families even if financial aid is not required, health services, occupational training or re-training, and boarding- and foster-home care.

*Special Services.*—Certain divisions of the Health Branch of the Department of Health and Welfare include social services as part of their treatment. Medical social workers, appointed by the Social Welfare Branch, serve patients of the Tuberculosis Sanatoria and Venereal Diseases Clinics and their families. Provincial institutions and hospitals also have social service programs, and case-work services are provided in the Provincial Mental Hospital and Child Guidance clinics. Infirmary applications and a hospital clearance program are carried out by the field staff under the supervision of the Inspector of Hospitals, with the advice of the Social Welfare Branch personnel.

Federal Departments use the services of the Social Welfare Branch co-operatively in connection with social investigations required in any part of the Province.

### Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease. A summary of provincial legislation is given in Chapter XIX.

### Subsection 4.—Care of Dependent and Handicapped\*

Detailed statistics of charitable and benevolent institutions in Canada are made available quinquennially and, as reported for the 1941 Census, appear at pp. 677-682 of the 1943-44 Year Book. Table 10 gives figures as at June 1, 1946.

\* Prepared in the Institutions Section, Health and Welfare Division, Dominion Bureau of Statistics.

### PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

**Canadian Welfare Council.**—This Council, established in 1920, is a national association of over 1,200 organizations and individual citizens in partnership to secure comprehensive, well-administered social services of high quality for the Canadian people. It furnishes authoritative information, technical advice and field service in the main areas of social welfare and provides a means of co-operative planning and action, by serving as a link between the public and private agencies.

Membership is open to individuals and to associations. Among the member organizations of the Council are Community Chests and Councils, a wide variety of private social agencies, various federal, provincial and municipal departments and other groups active in the fields of health, welfare and education.

The policies and program of the Council are determined by its members with the help of a nationally representative elected board of governors. Aided by a professional staff who provide both central office and field services, the members work together in these divisions: Child Welfare, Family Welfare, Recreation, Public Welfare, Delinquency and Crime, Community Chests and Councils. In addition to the divisions, there are standing committees on research, volunteer social work, field services and personnel in social welfare. A department of French-speaking services and a department of public relations maintain liaison between the Council staff, Council members and the public.

Some subjects to which the Council has given study are the regulation of child labour, controls for juvenile immigration, Canadian adoption laws as a step towards improved adoption procedure in all provinces, needs of the aged, public assistance, residence and settlement legislation, rehabilitation of the disabled and a large number of surveys on a variety of subjects, requested by agencies, communities and provinces.

In addition to its magazine, *Canadian Welfare*, published eight times a year, the Council issues reports, pamphlets, briefs and division bulletins and an annual directory of Canadian welfare services. It organizes conferences, institutes and lectures, as well as a two to three-day annual meeting.

The Council has a broad basis of support. Its annual budget is financed by grants and assessments from Community Chests, Federal and Provincial Government grants, donations, memberships and payments for special services.

**The Canadian Red Cross Society.**—The Canadian Red Cross Society was founded in 1896 to furnish volunteer aid to the sick and wounded in time of war and to work for the improvement of health, the prevention of disease and the mitigation of suffering. The peacetime program of the Society consists of eight major services. The operation of outpost hospitals and of a blood transfusion service are important projects receiving attention within nearly all provincial divisions. Nutrition and carrying homemaker's services, and the teaching of swimming and water safety are carried on in most branch areas. In addition, relief is supplied in times of national

and international disaster; craft training and recreational centres are operated for hospitalized war veterans and a national inquiry bureau traces persons for the purpose of reuniting families and friends.

In 1947 a national blood transfusion service was initiated in British Columbia and Alberta with the aim of supplying all hospitals with free blood and plasma so that immediate transfusions may be available to patients everywhere without charge. During 1948 this service was extended to cover Nova Scotia, Prince Edward Island and part of Quebec.

Four additions during 1948 brought to a total of 75 the number of outpost hospitals and nursing stations operated by the Red Cross as a service to settlers in isolated areas.

A nutrition study designed to measure the scientific effect of supervised school lunches on the health of children was in its final phase in 1948. More than 30 branches provide homemaker service to families when the mother is ill. Loan cupboards of sick room supplies have been established in order that families with sickness in the home may borrow nursing equipment free of charge. In 1948, 290 classes provided instruction in home nursing.

Relief in time of disaster is an important branch of Red Cross work; during 1948 a \$2,500,000 rehabilitation fund for the distressed was administered. During the severe spring floods in British Columbia, Red Cross House in Vancouver served as headquarters for combined relief operations and Red Cross volunteers assisted the Armed Forces in providing aid to the homeless.

Immigrants are met by Red Cross workers at reception centres and Red Cross nurseries are operated at ports. Clothing, hospital supplies and surgical dressings, made by voluntary workers, are provided for use in Canada and for shipment overseas. The Society shipped supplies valued at more than \$2,000,000 to war-devastated countries on behalf of Red Cross and other voluntary agencies.

Hospitalized veterans participate in Red Cross arts and crafts programs under the instruction of a staff of 37 Red Cross supervisors and 125 voluntary workers. The Society also operates recreation centres and next-of-kin hostels in connection with Department of Veterans Affairs hospitals. Other services include films and entertainment, regular visits, transportation and welfare services for needy veterans and families.

In an effort to reduce Canada's annual drowning toll, swimming and water safety are taught as part of a first-aid program by some 1,000 Red Cross instructors.

The Canadian Junior Red Cross with a membership of more than 850,000 promotes health and good citizenship in 29,715 school-room branches across Canada. Since the beginning of its program, more than 30,000 handicapped children have received treatment through the Junior Red Cross Crippled Children's Fund, including 2,628 children treated in 1948.

Funds to carry on Red Cross work are voluntarily subscribed and in 1948 approximately \$4,000,000 was obtained through the annual campaign of the Society.

**The Health League of Canada.**—The Health League of Canada is a voluntary association devoted to a program of health education. Through the media of press, radio, poster, pamphlet, motion picture and the public platform, the League keeps the public informed concerning the health value of milk pasteurization, immunization procedures for preventable diseases, proper nutritional habits, sanitary work practices by public food-handlers and organized health programs for industrial workers. Particular divisions deal with these specific health problems; a social hygiene division conducts a program against the spread of venereal disease.

The League supplements its year-round program with the annual sponsoring of National Health and National Immunization Weeks. During these two weeks all branches and divisions of the League co-operate with Federal, provincial and local health authorities particularly in publicizing general health practices and immunization procedures.

Health League branches have been organized in several provinces and are particularly active in Ontario and Quebec. A Voluntary Committee on Health of the Senate and House of Commons has been organized by the Health League to disseminate information to Members of Parliament and to serve as a forum for their discussion of health matters.

**The Order of St. John.**—The Order of St. John in Canada has its headquarters and national offices at Ottawa with branches in every province, and local centres in hundreds of cities, towns and villages throughout Canada. The Order has two subsidiary branches, the St. John Ambulance Association and the St. John Ambulance Brigade, the first devoted to teaching, the second to rendering voluntary public assistance as required. The primary purpose of the Order is to teach first-aid, home nursing, child welfare, sanitation, hygiene and kindred subjects to citizens of Canada irrespective of age, race and creed, and to provide trained and organized personnel to help in time of disaster or national emergency.

The Canadian branch was organized in 1895 and since that time more than one and a quarter million persons have been trained and have passed examinations in the various subjects. Uniformed members of the Order are to be found ready to render assistance at large gatherings such as exhibitions. During the winter season members are in attendance on many ski-runs to provide first-aid to the injured.

A blood grouping program was started early in 1943 in order that compatible donors may be obtained in emergencies with the least possible delay. Since the inception of the program upwards of 175,000 persons have been classified by blood-group.

**The Victorian Order of Nurses for Canada.**—The Victorian Order of Nurses is a voluntary public health agency, national in scope and having as its primary object the care of the sick in their own homes by visiting nurses. The Order provides a community service available to everyone in the area served. Care is given under medical direction by visiting nurses to medical, surgical and maternity patients, a large percentage of whom would otherwise be without skilled nursing care.

Part-time nursing service is given industrial plants where the number of employees does not warrant full-time employment of a nurse. In smaller centres where the Victorian Order provides the only public health nurse, the program of work is usually enlarged to include school nursing, assistance at immunization clinics and child health centres and other public health services.

Patients are expected to pay the cost of the home visits, but fees are scaled according to family income and service is never refused because of inability to pay. Visits during 1948 numbered 925,592, of which 55 p.c. were free; 20 p.c. were paid; 15 p.c. were paid in part, and 10 p.c. were paid by insurance companies for care to patients. The cost of the service to those unable to pay is provided for by municipal grants or funds collected by means of campaigns.

In 1948 there were 105 branches of the Order distributed as follows: Nova Scotia 16; New Brunswick 8; Quebec 6; Ontario 60; Manitoba 1; Saskatchewan 3; Alberta 3; and British Columbia 8. Nursing care integrated with health teaching was given by approximately 489 nurses to 129,237 patients.

**Canadian Conference of National Voluntary Health and Welfare Organization.**—This organization was set up on an experimental basis in April, 1949, following a two-year series of informal meetings of executives of national voluntary agencies who met to explore the need and possibility of co-operation in matters of common concern. The Conference provides national health and welfare agencies with a clearing house and a medium for joint study and action on common problems.

**Canadian Committee of Youth Services.**—This Committee was established in June, 1949, for the purpose of providing a medium for joint planning and action on the part of Canadian organizations concerned with youth welfare.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

**Canadian Criminal Law and Procedure.**—A review of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book; it includes a résumé of procedure and an account of the jurisdiction of the various classes of judges and magistrates. A description of the Federal and Provincial Courts is given at pp. 107-115 of this edition.

The statistics presented in this Chapter are summarized from the "Annual Report of Statistics of Criminal and Other Offences," and are collected directly from the criminal courts in the different judicial districts throughout Canada. There are 150 judicial districts, divided by provinces as follows: Prince Edward Island 3, Nova Scotia 7, New Brunswick 15, Quebec 28, Ontario 48, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8, Yukon 1, and the Northwest Territories 1.

Crime is divided into two definite classes, criminal or 'indictable' offences, which include all serious crimes covered by the Criminal Code (see pp. 296-302), and summary or 'non-indictable' offences, which comprise less serious crimes and breaches of municipal by-laws (see pp. 302-306).

Indictable offences are so designated in the statutes creating them and providing for their punishment. They include all offences that are not punishable by way of summary conviction. A limited few of such offences are triable by Magistrates without the consent of the accused, by virtue of Part XVI of the Criminal Code of Canada relating to the summary trial of indictable offences. The great majority, however, are triable only in the Superior Court of the province with a jury or, by consent of the accused, under Part XVIII of the Criminal Code relating to the speedy trial of indictable offences or by a Magistrate under Part XVI aforesaid.

\* Except as otherwise stated this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics. The 72nd "Annual Report of Statistics of Criminal and Other Offences", for the year ended Sept. 30, 1947, is obtainable from the Dominion Bureau of Statistics, Price 50 cents.

# CONVICTIONS FOR INDICTABLE OFFENCES, BY CLASSES

1939, 1946 AND 1947

# CONVICTIONS OF JUVENILES FOR MAJOR OFFENCES, BY CLASSES

1939, 1946 AND 1947

Non-indictable offences include all offences that are not expressly made indictable. This includes all provincial offences, examples of which are violations of traffic laws and municipal by-laws. Non-indictable offences are triable by Magistrates and Justices of the Peace under Part XV of the Criminal Code or under the Provincial Summary Conviction Acts as the case may be.

## PART I.—ADULT OFFENDERS

### Section 1.—Total Offences

The total number of adult offences in 1947 was greater than in the previous year but it should be noted that the most serious charges before the courts have decreased. The summary convictions have over-balanced an apparent gain in the number of indictable offences and increased the total figure over that of 1946 by 12.7 p.c.

In 1947, 803,139 charges against offenders were dealt with by the courts as compared with 713,631 charges in 1946. Charges for indictable offences numbered 50,681 as against 53,959 of the previous year. Charges for non-indictable offences amounted to 752,458; in 1946 these numbered 659,672.

Convictions for indictable offences totalled 44,056 in 1947 a decrease from 1946 of 6.1 p.c.

Non-indictable convictions in 1947 rose to 752,458, an increase of 14.1 p.c. over those reported in 1946. This increase was spread over all the provinces except Nova Scotia.

Ontario led the provinces in total convictions per 100,000 estimated population during 1947 with a ratio of 10,205 against a ratio of 9,157 in 1946. The other provinces in order were as follows with the ratio for 1946 shown in parentheses:—Manitoba 6,726 (5,344); Quebec 5,283 (5,112); British Columbia 4,761 (3,601); Yukon and the Northwest Territories 3,371 (2,525); Prince Edward Island 3,173 (3,229); New Brunswick 3,170 (3,212); Alberta 2,743 (2,468); Nova Scotia 2,232 (2,480); Saskatchewan 2,071 (1,979). This last province has held the most favourable position since 1943.

<b>Totals.....</b>	<b>448,692</b>	<b>24,546</b>	<b>471,285</b>	<b>26,598</b>	<b>669,638</b>	<b>36,973</b>	<b>758,953</b>	<b>37,561</b>
	CONVICTIONS PER 100,000 POPULATION 16 YEARS OF AGE OR OVER							
	1944		1945		1946		1947	
	M.	F.	M.	F.	M.	F.	M.	F.
Indictable offences.....	885	100	886	78	992	75	915	71
Non-indictable offences....	9,450	497	9,904	557	14,991	797	16,014	798
<b>Totals.....</b>	<b>10,335</b>	<b>597</b>	<b>10,790</b>	<b>635</b>	<b>15,983</b>	<b>872</b>	<b>16,929</b>	<b>869</b>

The text on p. 295 is published so that comparisons with Year Book figures of other years may be made. However, a fairer picture is obtained, as shown in Table 1, by calculating the ratio of total convictions to the estimated population of 16 years or over, the ages of adult offenders. Although this raises the figure in each case, it does very little to change the alignment of the provinces according to the number of convictions to the estimated population of 16 years or over per 100,000. The rates would then be as follows: Ontario 13,878, Manitoba 9,375, Quebec 7,991, British Columbia 6,355, New Brunswick 4,858, Prince Edward Island 4,690, Alberta 3,974, Nova Scotia 3,269, and Saskatchewan 2,988.

If, however, only the ratio of indictable offences to the estimated population of 16 years or over were taken into account the order of the provinces would be changed considerably with Alberta having the largest ratio of serious crimes, Saskatchewan moving from the bottom to the seventh place, Quebec dropping from third to eighth place and Prince Edward Island having the lowest proportion.

### Subsection 1.—Indictable Offences

The main interest in criminal statistics is concerned chiefly with the more serious offences. While such offences are by far the least numerous, nevertheless, from the standpoint of protection of the person and of property, they are the most important.

In 1938 the total number of convictions for indictable crimes was 43,599; in 1947 it had increased to 44,056, only 1 p.c. The increase in the estimated population of 16 years or over during the same period was 14.1 p.c.

The number of indictable crimes decreased in all provinces in 1947 except Alberta, British Columbia and in Yukon and the Northwest Territories.

### —Convictions for Indictable Offences, by Provinces, Years Ended Sept. 30, 1938-47

NOTE.—Figures for 1900-20 are given at p. 1016 of the 1933 Year Book, for 1921-30 at p. 908 of the 1942 edition and for 1931-37 at p. 1108 of the 1946 edition.

**Analyses of Convictions for Indictable Offences.**—In three of the six classes (Class I, III, V) into which indictable crimes are divided for statistical purposes, as shown in Table 3, an increase was shown in 1947.

The increase in Class I, crimes against the person, is discounted by the fact that the crimes of intimidation, and sodomy and bestiality, previously listed in Class VI, were placed in this class in 1947.

In Class III, which includes crimes against property without violence, fewer thefts of automobiles accounted for a decrease in the total number of thefts. The number of convictions for false pretences was influenced by multiple convictions. A total of 1,261 offenders were convicted of false pretences. Of this number, 401 had four or more convictions against them for this crime. The figures in Class V are always somewhat misleading as forgery and uttering are, like false pretences, crimes that may be committed several times before the person is detected. For example, 708 persons committed 1,772 forgeries. Of this number, 331 persons had three or more convictions against them.

A decrease of 11.2 p.c. was reported in cases (Class IV) of violent and malicious crimes against property; and a decrease was also shown in all but one of the crimes in Class VI. Offences under the Opium and Narcotic Drug Act shown in this class, have increased in number since 1943 when there were 143 convictions to 247 convictions in 1946 and 341 convictions (266 males and 75 females) in 1947. The Chinese, contrary to common belief, form a very small proportion of those convicted of violations of this Act. Only 5.2 p.c. convictions were against persons of Asiatic birth while 79.8 p.c. were against Canadian born persons. Ontario and British Columbia showed a preponderance of convictions with 48.4 p.c. and 31.1 p.c., respectively. Over two-thirds in each case occurred in the two large centres of Toronto and Vancouver.

<sup>1</sup> Offences against females include the following crimes; abortion, assault against females, assault against wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape, seduction and wife desertion.

**Analyses of Convictions for Indictable Offences.**—Table 4 shows that at least 75.9 p.c. of persons convicted of indictable crimes in 1947 had not gone beyond elementary school grades in their education; that over one-half (52.2 p.c.) of the

crimes were committed by persons between 21 and 40 years of age and 18.6 p.c. by persons over that age; that 81.5 p.c. of those convicted were dwellers in urban districts; and that at least 84.0 p.c. were born in Canada.

<sup>1</sup> Occupations are classified to comply with the census grouping of occupations. To compare with previous Year Book tables: 'commercial' is used in the same sense as 'trade'; manufacturing and construction are separated and electric light and power added to the latter; laundry and cleaning are included in personal service.

**Convictions of Females.**—Although total convictions against men have increased considerably since 1943, those against women have dropped to 3,053, less than one-half of the 1943 figure. Decreases were shown in all provinces except Ontario, Manitoba and Alberta in 1947.

**5.—Convictions of Females for Indictable Offences, by Provinces, Years Ended  
Sept. 30, 1943-47**

Province or Territory	Numbers of Convictions					Percentages of Females Convicted to Total Convictions

**Multiple Convictions.**—The total number of convictions for any one year must not be confused with the total number of persons convicted for the same period since persons tried for indictable offences are, in many cases, convicted for more than one offence at the same trial. The trend of such multiple convictions is of value to students of sociology. They occur more often in cases of forgery and uttering, false pretences and fraud, theft and receiving stolen goods, burglary and offences against the Wartime Prices and Trade Board Act.

**6.—Persons Convicted of More than One Offence at the Time of Trial compared

**Acquittals in Relation to Convictions and Recidivism.**—The ratio of acquittals to convictions for indictable offences for the period 1943-47 averaged 13.1 p.c. The percentage varies greatly as between the provinces. In 1947, Ontario showed the highest percentage of acquittals with Quebec second and Nova Scotia third; Yukon and the Northwest Territories had the lowest percentage—only 2.5 p.c.

The ratio of repeaters was slightly higher in 1947 than it has been for the last five years when it was, approximately, one in every three convicted persons. In these statistics, a person is considered a second offender, or repeater, if convicted of two crimes or more, even though there may be only one court hearing. This tends to exaggerate the problem of recidivism, and it should be recognized that the number of convictions is affected by multiple convictions.

**Sentences.**—The proportions that the different types of sentences bear to the total number of convictions remained relatively the same over the five-year period 1943-47. In 1947 fewer fines were imposed than in 1946. This resulted in proportionally more suspended sentences and gaol sentences. Death sentences dropped from 32 to 18, the latter being close to the average figure for the ten-year period 1938 to 1947.

## Subsection 2.—Non-Indictable Offences

The following statistics relate to non-indictable offences of adults disposed of by Police Magistrates or other Justices of the Peace, under authority of the Summary Convictions Act. Such convictions showed an increase of 14.1 p.c. in 1947 as compared with 1946, an all-time peak. Increases were general in all provinces except Nova Scotia.

## 11.—Convictions of Adults for Non-Indictable Offences, by Provinces, Years Ended Sept. 30, 1938-47

NOTE.—Figures for 1900-12 are given at p. 1020 of the 1933 Year Book, for 1913-30 at p. 913 of the 1942 edition and for 1931-37 at p. 1113 of the 1946 edition.

**Analyses of Convictions for Non-Indictable Offences.**—It should be remembered that, while the Criminal Code undergoes little change over a period of time, the figures for summary convictions are greatly influenced by the customs of the people and show a tendency to fluctuate as municipal regulations are strictly enforced or allowed to lapse.

Table 12 shows an appreciable decrease in certain non-indictable offences, for example: gambling decreased by 36.8 p.c., frequenting bawdy houses by 36.9 p.c., vagrancy, including loose, idle and disorderly conduct, by 27.6 p.c.

In spite of these and other reductions, the total number of non-indictable offences in 1947 increased by 14.0 p.c. over those of 1946. Offences which showed a marked increase were:—offences against game and fishery Acts; breaches of traffic regulations; infractions of revenue laws; possessing a radio without a licence; and infractions of various municipal by-laws.

*Convictions for Drunkenness.*—Convictions for drunkenness and for offences against the Liquor Control Act in 1947 are both out of line with the figures for these offences in previous years. The former showed an increase of 6,792 convictions and the latter a decrease of 4,876. This may be due to a change in the method of compilation instituted in 1947. Heretofore, the compilation of the non-indictable offences was done at the Dominion Bureau of Statistics; now the compilation is done by local court officials and consists of the total number of convictions for each offence tabulated by the disposition of the case. This procedure gives a truer picture than has been attained before. Offences recorded against the Liquor Control Act include such infractions as the unlawful possession or the unlawful sale of liquor but exclude cases of drunkenness, a distinction that can be made more accurately by the local court officials.

To bear out this assumption it is noted that in New Brunswick, Manitoba, Saskatchewan and the Northwest Territories the figures for drunkenness were lower than in the previous year while in the same provinces the number of offences against the Liquor Control Act were higher.

Conversely in Nova Scotia, Quebec, Ontario, British Columbia and Yukon, the figures for drunkenness increased, while convictions for offences against the Liquor Control Act decreased. Only in Prince Edward Island were both figures lower and only in Alberta were both higher.

<sup>1</sup> Figures below the ruled line are not comparable with those above and were compiled by local officials—see text at p. 303.

Alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops until the First World War. During that War prohibition was established generally but, in more recent years, the Provincial Governments have taken over the sale of liquors through liquor commissions. Prince Edward Island was the last of the provinces to give up prohibition on July 6, 1948.

*Breaches of Traffic Regulations.*—At the beginning of the present century, when the motor-car was scarcely known and to-day's speeds even for freight movements were unheard of, convictions for breaches of traffic regulations numbered only 1 for all Canada. A strong influence in reducing convictions under breaches of traffic regulations in 1943, 1944 and 1945 was the removal, owing to wartime restrictions, of a large number of private and passenger vehicles from the highways. The lifting of these restrictions resulted in a record number of convictions in 1946 and again in 1947. Such convictions accounted for 71.4 p.c. of all non-indictable offences in the latter year.

**15.—Convictions for Breaches of Traffic Regulations, by Provinces,  
Years Ended Sept. 30, 1938-47**

NOTE.—In 1938 and later years dangerous and reckless driving was classified as an indictable offence, as was leaving the scene of an accident from 1939 onwards. Figures for 1900-20 are given at p. 1023 of the 1933 Year Book, for 1921-30 at p. 915 of the 1942 edition, for 1931-36 at p. 1115 of the 1946 edition and for 1937 at p. 284 of the 1948-49 edition.

For the year 1947, Ontario, which had 43·5 p.c. of the registrations of motor-vehicles in Canada, had 58·7 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 16·2 p.c. of the motor-vehicles and 25·7 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above two provinces have large urban centres, while in provinces with lower degrees of urbanization such as the Maritimes, Saskatchewan and Alberta, convictions were low in proportion to the number of motor-vehicles registered.

**Convictions of Females.**—In 1947, five of the provinces showed decreases from the previous year in the number of convictions of females for non-indictable offences. Convictions of females in Ontario increased by 3·9 p.c., Manitoba by 1·6 p.c., Alberta by 16·3 p.c., British Columbia by 17 p.c., and Yukon and Northwest Territories by 58·1 p.c. though the numbers are small.

Breaches of street-traffic regulations, the most numerous single offence of women, accounted for 18,698 in 1947 as against 18,017 in 1946. Drunkenness came next with 4,603 an increase of 347 over 1946. Infractions of liquor Acts numbered 1,524 as against 2,038 in the previous year, a considerable reduction. Convictions recorded as vagrancy were also less by 15·1 p.c.

Of a total of 34,508 convictions in 1947, no less than 3,479 or 10·1 p.c. were for minor infractions of municipal by-laws.

**16.—Convictions of Females for Non-Indictable Offences, by Provinces,

**Section 2.—Appeals**

In the calendar year 1947, 12.1 p.c. of the appeals in indictable cases resulted in the convictions being quashed. Appeals were dismissed in 68 p.c. of the cases, and new trials were directed in 5.9 p.c. of the cases while 14 p.c. of the sentences were varied. In non-indictable cases 50.2 p.c. of the appeals were dismissed, 34 p.c. of the convictions were quashed and 15.3 p.c. of the sentences were varied.

## PART II.—YOUNG OFFENDERS

**Indictable Offences.**—It is a disquieting fact that in 1947 more than one-third (38·8 p.c.) of all indictable crimes were committed by young people between the ages of 16 and 24 years. As this age group includes the most daring offenders and at the same time those most likely to profit by education and training, it seems worthwhile to give consideration to it as distinct from the confirmed or older offenders groups. Where proper segregation in reformatories and penitentiaries is possible young offenders will be found more often in the open reformatories or institutions conducted on the Borstal system.

Offenders in this age group, although comprising only 15·6 p.c. of total population over 16 years of age, were responsible in 1947 for 70·6 p.c. of the crimes of burglary and robbery, 47·2 p.c. of all cases of damage to property without violence and 49·0 p.c. of the malicious damage to property including arson.

**Types of Crime.**—In 1947, the most common crime against the person, committed by young men, was common and aggravated assault including assault on and obstructing the police. However, it should be noted that in 1947 there was a decrease in all classes of offences since 1946, except for forgery and offences against currency which increased by 20·7 p.c. for males and by 83·5 p.c. for females. In the case of males these offences increased in the age group 21-24 years only but for females in the lowest age group 16-18 years it increased by over 127 p.c., 19-20 years by 54 p.c. and 21-24 years by 77 p.c.

More convictions were recorded for theft than for any other offence and 23·8 p.c. of the 6,093 thefts were of motor-vehicles. Such offences as the latter often lead to more serious crimes such as robbery and burglary, which were the next most frequent. Theft, too, is the most common cause for bringing young women before the courts on indictment, though with them theft of cars is almost negligible.

Offences common to males tend towards those requiring physical strength and daring but women are given to offences that require mental agility and cunning, such as fraud, embezzlement and false pretences, forgery and uttering forged documents.

## PART III.—JUVENILE DELINQUENCY

### Section 1.—Causes and Court Treatment of Juvenile Delinquency

Information on the causes and court treatment of juvenile delinquency is given at pp. 247-248 of the 1947 Year Book.

### Section 2.—Juvenile Delinquency Statistics

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made, however, by which the Governor in Council may proclaim that in a Province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Alberta, Manitoba and Quebec. For uniformity the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only.

The "Annual Report of Criminal and Other Offences" published by the Dominion Bureau of Statistics deals primarily with delinquency cases disposed of by the courts. The information it gives serves to further the program of the treatment of young offenders. The fact that juvenile court statistics furnish the most comprehensive figures collected on a country-wide basis makes it important that the possibilities and limitations of these statistics be understood.

In the first place, it is impossible for any report to give a complete picture of juvenile delinquency, as many instances of minor offences are not detected, while others are settled by the police, social agencies, or school authorities without the necessity of apprehending the child. This is particularly true in rural districts where the courts are not readily accessible.

Secondly, the number of cases brought before the courts is influenced by such factors as the personnel and facilities of the court, and community interest in, and understanding of, the function of a juvenile court. Furthermore, it must be

remembered that as time goes on more courts are established and the additional returns may exaggerate an apparent increase in delinquency or may under-estimate a decrease.

Thirdly, although the figures refer to offenders rather than offences, they do not represent the number of delinquent juveniles because some children may be brought to court more than once within a year, and in the tables of the Report such children are recorded as separate individuals each time they appear on a new complaint.

Lastly, the number of delinquency cases reported by the courts is affected, to a considerable extent, by variations in the policies of the courts in the disposition of cases. Some courts handle certain cases unofficially, that is, in these cases legal papers are not prepared and the case is adjusted by the judge or other officer of the court without a formal court hearing. Although some of the courts report the cases as adjourned *sine die*, others consider the interview as an 'occurrence', meaning that the case is not recorded as a charge.

Reports of juvenile offences were received in 1947 from 136 judicial districts out of a total of 150 districts.\* Fourteen districts reported no offences. The reporting area for 1947, as for earlier years, is particularly representative of cities and towns, and includes 105 urban centres in Canada with populations of 4,000 or over.

### Subsection 1.—Total Juvenile Offences

The terms 'indictable' and 'non-indictable' are applied only to offences of adults. Similar offences committed by juveniles are termed 'major' offences and 'minor' offences, respectively.

**Delinquents Brought Before the Courts.**—The statistics for 1947 show that the decline in the number of court cases of juvenile delinquency, first noted in 1943, is continuing. Children brought before Canadian courts during 1947 numbered 8,265 as compared with 8,707 in 1946, a decrease of 5.1 p.c. The number of delinquents charged with major offences decreased from 5,409 in the previous year to 5,152 in 1947, or 4.8 p.c. The number of juveniles charged with minor offences that were disposed of by the courts was 3,113 during 1947 as against 3,298 in the preceding year, a falling-off of 5.6 p.c.

Table 1 shows the number of cases brought before the courts, by provinces, from 1943 to 1947. In 1947 a decrease was apparent in each of the provinces, except Nova Scotia, Manitoba, Saskatchewan and British Columbia, as compared with the previous year. Yukon and the Northwest Territories reported cases for the first time since 1940.

\* In Quebec, the Judicial Districts of Rouyn-Noranda and Témiscamingue have been added. The 18 counties in Nova Scotia are combined in 7 judicial districts.

**1.—Juvenile Offenders Brought Before the Courts, by Provinces, Years Ended Sept. 30, 1943-47**

The peak in delinquency among girls was reached in 1943, a year later than for boys, followed by a decline in numbers for both sexes. The ratio between boys and girls charged in court shows a gradual up-gradings for the girls until 1946. The actual number of girls appearing in court in 1947 was the lowest since 1938.

**2.—Ratio of Boys and Girls Brought Before the Courts, Years Ended Sept. 30, 1933-47**

Year	Boys		Girls		Total Charges
	No.	p.c.	No.	p.c.	No.

1947.....	-3.3	-17.3	-5.1	-17.1	+14.3	-14.6

**Trends in Juvenile Delinquency.**—The first three years of the Second World War were marked by serious and rapid increases in juvenile delinquency. This was to some extent the outcome of the 'broken home' situation brought about by the enlistment of the male parent, the resultant removal of the father's restraining influence and the increase in the responsibilities placed upon the mother during his absence. The figures for 1942 reached an all-time high with 11,758 major and minor convictions. Since then there has been a gradual decline to 7,545 in 1947, the lowest figure since 1938. Though the continued decline is encouraging, efforts should not be slackened to attain even better results.

Many factors are contributing to the apparent reduction in cases of delinquency. Communities are realizing that the solution to this problem is to be found in an extension of opportunities that will provide wholesome occupation for after-school hours, early detection and treatment of delinquents, better psychiatric service for schools and mental hygiene clinics, trained personnel for probation and juvenile court work, better parenthood through home and school associations and adult education programs and improved housing. There is no longer the opportunity for highly paid employment which lured young people from school during the War. A more sympathetic interest in the activities of youth on the part of the police is evident in the assignment of special constables to juvenile cases and the "police and youth" program inaugurated by the Royal Canadian Mounted Police and adopted in many centres by municipal and provincial police (see p. 330).

On the federal level the development of a national physical fitness program in 1943, followed, in 1945, by the payment of family allowances for children under 16 years of age, the provision of special services in local offices of the National Employment Services for the placement of the 'first jobbers', and the continuance of a high rate of employment all assist in maintaining the downward trend.

In recent years changes have been made in provincial legislation for the better protection of children. For example, in 1943 British Columbia passed an Act to provide for the Protection of Children. In 1944 New Brunswick passed the Juvenile Court Act and Saskatchewan the Act to amend the Child Welfare Act whereby children, who were wards, came under the authority of the Department of Social Welfare rather than the Department of Labour and Public Welfare. In 1945 the Prince Edward Island Minimum Age for Industrial Employment was set at 15 years. In March, 1946, Alberta amended the Mothers Allowance Act raising the permissible age of a child attending school to 18 years if school-work is satisfactory. In the same year in Quebec, a Department of Social Welfare and Youth was created to take an active interest in the prevention of delinquency and the improvement of reform institutions; and in Ontario, a Department of Reform Institutions was established. In 1947 an Act was passed making provision for the establishment of a Nova Scotia School for Boys to serve as a reformatory for the older group of juvenile offenders.

### Subsection 2.—Major Offences

Table 4 shows the convictions of juveniles for major offences for the years 1938-47.

In the ten-year period 1938-47, the number of convictions for major offences per 100,000 of the population of the age group 7 to 16 years went as high as 357 in the peak year of 1942, while in 1947 it was 243.

#### 4.—Convictions of Juveniles for Major Offences, by Provinces, Years Ended Sept. 30, 1938-47

NOTE.—Figures for the years 1933-37 are given at p. 254 of the 1947 Year Book.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon and N.W.T.	Canada
1938.....	21	283	224	1,357	2,162	222	225	298	263	—	5,055
1939.....	45	228	244	1,245	2,164	293	201	321	277	—	5,018
1940.....	41	195	251	1,461	2,229	286	208	364	262	1	5,298
1941.....	58	244	344	1,637	2,588	315	263	378	377	—	6,204
1942.....	60	220	279	1,617	3,071	503	397	472	301	—	6,920
1943.....	53	373	337	1,455	2,804	363	359	349	401	—	6,494
1944.....	82	362	363	1,212	2,901	345	356	431	477	—	6,529
1945.....	55	390	221	1,239	2,394	277	282	384	516	—	5,758
1946.....	54	293	257	1,122	1,993	238	182	327	483	—	4,949
1947.....	29	316	248	951	1,861	357	197	225	482	17	4,683

Offences against property made up the bulk of major delinquencies (92.9 p.c.) and more than one-half of those were offences against property without violence (56.3 p.c.). This group includes all thefts without violence. Offences against property with violence (burglary, breaking and entering) which were on the increase until 1944 followed the general downward trend in 1945 and 1946 but increased slightly in 1947. They comprised more than one-quarter of the total convictions for major offences (29.7 p.c.).

Figures for offences against persons were not more than 4.2 p.c. of the total number of convictions for major offences in the period 1938-46 but were 4.0 p.c. in 1947.

#### 5.—Convictions of Juveniles for Major Offences, by Classes of Offence, Years Ended Sept. 30, 1938-47

NOTE.—This table is not comparable with those published in previous Year Books as rates are based on the population 7-16 years of age and former rates were compiled on total population.

**Types of Major Offences Related to Age and Sex of Offenders.**—The outstanding point of interest in juvenile delinquency is the fact that the total number of major offences in 1947 for all delinquents was lower than any figure reported since 1924. The reductions which accounted for this improved figure in 1947, are to be found in fewer cases than in 1946 of aggravated assault and wounding, endangering life on railway, theft and receiving stolen goods, wilful damage to property and immorality. Immorality was the third highest misdemeanor of the girls.

Of those appearing in court, 10·9 p.c. were girls in 1947 and 4·6 p.c. of convictions for major offences were against girls.

As children become older, the percentage of major offences tends to increase. In 1946 more than one-half the major offences were committed by boys and girls of 14 and 15 years of age, the former 45·8 p.c. and the latter 55·8 p.c. However, in 1947 it was the younger children who showed an increase in the number of major offences over those of 1946. These offences were committed by those of both sexes, of seven and eight years of age, the ten-year old girls and the eleven and twelve-year old boys, in fact, 37·4 p.c. of major offences involving boys were committed by lads of 12 years of age and younger.

**Education and Delinquency.**—Presuming that six is the age for entering school, 51·2 p.c. of the girls and 49·1 p.c. of the boys known to have attended elementary school committed major offences in 1947. These juveniles were two years or more behind the normal grade for their age. Only 2·2 p.c. of juvenile delinquents were a year or more in advance of the usual grade for their age and 8·4 p.c. attended high school for some period of time.

**Repeaters.**—Experience, which dispels or increases resentment to authority, may be a factor in encouraging or deterring repeaters. Some of the responsibility for the attitude that is built up, be it good or bad, rests on the police, the probation officer, the staff of the detention home and the judge. The recollection of how he was picked up the first time, how he was handled while awaiting hearing, the opinion of those in whose care he was placed during the process of readjustment, all make an impression on a child.

Over the ten-year period, 1938-47, approximately one in every four children brought before the court for major offences had failed to heed the first warning of the court and had made at least a second appearance. The figures for major offences in 1947 showed that in more than two-thirds of the cases (72.1 p.c.) the children were brought before the court for the first time, 14.4 p.c. were second offenders, 7.0 p.c. third, 2.9 p.c. fourth and 3.6 p.c. were dealt with by the courts five or more times. Previous court experience of boys and girls who were committed for major offences is shown in Table 8, covering the period 1938-47.

**Disposition of Cases of Major Offenders.**—The disposition of cases by the various courts depends on the practices within the courts and on the facilities for court supervision, for institutional care and for other services for children. The practices may vary between courts or from year to year in the same court but generally, the disposition of cases remains much the same. Placing the child on probation of the court or of his parents and suspended sentences accounted for more than one-half of the disposition of cases for major offences in 1947. The cases sent to training schools represented 14.1 p.c.

### Subsection 3.—Minor Offences

Convictions for minor offences, like those for major offences, have declined steadily since 1942. The apparent decline of minor offences in 1947 is due to fewer charges and convictions against girls which offset a slight increase in the number of those against boys.

Traffic infractions and incorrigibility are the most frequent misdemeanours of a minor nature for both boys and girls. However, only 88 of the 600 traffic infractions were related to motor cars. The remainder were misdemeanours to do with bicycles such as having no lights or bell, riding on the sidewalk or without a licence, etc.

Table 10 gives a summary of convictions of juveniles for minor offences by types of offence for the years 1938-47.

### 10.—Convictions of Juveniles for Minor Offences, by Types of Offence, with Percentages of Total Minor Convictions, Years Ended Sept. 30, 1938-47

NOTE.—Figures for the years 1922-36 are given at p. 261 of the 1947 Year Book and for 1937 at p. 295 of the 1948-49 edition.

**Disposition of Cases of Minor Offences.**—The disposition of juveniles brought before the courts for minor offences is proportionately much the same as that for major offences. Over the ten-year period 1938-47, well over one-half of

the delinquents were reprimanded and allowed to go under supervision or to have their sentences suspended. Approximately 23 p.c. made restitution for damages or paid a fine, and 14 p.c. were committed to training schools.

#### 11.—Disposition of Delinquents Convicted of Minor Offences, with Percentages of Total Minor Offences, Years Ended Sept. 30, 1938-47

### PART IV.—POLICE FORCES IN CANADA\*

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police and whose operations cover a very wide field in addition to purely police work; (2) the Provincial Police Forces—the Provinces of Ontario, Quebec and British Columbia have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) the Municipal Police—every city of reasonable size employs its own police organization which is paid for by the local taxpayers and which attends strictly to police matters within the borders of the municipality concerned.

The organizations under these three headings are described in turn below.

#### THE INFLUENCE OF THE ROYAL CANADIAN MOUNTED POLICE IN THE BUILDING OF CANADA

In 1670 King Charles II granted a charter to the Hudson's Bay Company for the purpose of trading in the vast and undefined area of Rupert's Land. This territory, with the exception of certain rights reserved to the Company, was purchased by the Dominion of Canada in 1869 and the Province of Manitoba was carved out of the acquired land in 1870. At the time of the sale, the city of Winnipeg had already come into existence as the gateway to the enormous and potentially rich area that stretched westward approximately 1,000 miles from the Red River Valley to the Rockies and from the United States Boundary to the forest country of northern Saskatchewan. But this was the only centre of importance.

\* The material under this heading has been obtained through the courtesy of Commissioner S. T. Wood, C.M.G., of the Royal Canadian Mounted Police. Section 2, dealing with Provincial Police Forces, was submitted to Commissioner Wood by Geo. A. Shea, O.B.E., Secretary-Treasurer, Chief Constables' Association of Canada, who, in turn, received the basic data from the individual Provincial Police Commissioners.

**Conditions Attendant on the Opening-Up of Western Canada.**—The new territory was a vast Indian hunting and battle ground—a gigantic buffalo pasture. The Indians of the farther plains had never permitted permanent trading posts to be established there, though they had not refused to accept trading visitors from the Saskatchewan and Missouri Valleys. But this did not satisfy the white man. Wagon trains from the Missouri River Valley and free traders with their carts from the Red River Settlement began to carry 'fire-water' to the Indians. Though many Hudson's Bay Company officers and missionaries made frequent and vigorous complaints, these had little effect and a veritable plague of illicit traffickers swarmed across the Border to the utter demoralization of Indians and white men alike. Especially troublesome were the members of the ferocious Blackfoot Nation—the Blackfoot proper, the Bloods and Piegans, all speaking the same language, and the Sarcees, a small adopted tribe. Settlers on their way north from the United States were commonly waylaid by debauched Indians and completely wiped out.

In 1873 a small party of freebooters from beyond the Boundary fell upon a camp of Assiniboines in the Cypress Hills, on the Canadian side, in retaliation, it was said, for wrongs inflicted by Indians from the north. With repeating rifles they cut down the defenceless red men indiscriminately. For no apparent reason, a camp of Piegans was butchered mercilessly to the number of 170 men, women and children by armed white men. Smallpox also appeared and was reducing the Indians of the plains to a sorry plight. These conditions were not conducive to orderly settlement. About this time, too, the demarcation of the western half of the International Boundary was being carried forward under an International Boundary Commission.

Altogether it was a strenuous period for the young Dominion—the Fenian raids had drawn heavily upon the Treasury, the future of the railway planned to span the continent at tremendous expense was obscure, the new Provinces of Manitoba and British Columbia were being organized, a severe trade depression prevailed and revenues were limited.

The Dominion Government, disturbed by the constant reports of lawlessness and disorder, assigned an officer to examine conditions. He reported that the entire Northwest was "without law, order or security for life or property" and recommended: (a) the appointment of a Civil Magistrate or Commissioner, after the models existing in Ireland and India; (b) the organization of a well-equipped force of from 100 to 150 men, one-third to be mounted; (c) the establishment of several government posts; and (d) the extinguishment by treaty of Indian titles to the land, and other essentials.

The commanding officer of the Canadian Militia was also despatched upon a western reconnaissance. He in turn reported that "a large military force was not required, but that the presence of a certain force would be found to be indispensable for the security of the country, to prevent bloodshed and preserve order".

**The Establishment of the North West Mounted Police.**—On May 23, 1873, six years after Confederation, the Dominion Parliament authorized the establishment of the North West Mounted Police. It had been the intention to call the Force "Mounted Rifles" but, in deference to suggestions reaching him, the Prime Minister, the Right Honourable Sir John A. Macdonald, drew his pen through the words and substituted "Mounted Police". The plan called for the enlistment of men between the ages of 18 and 40, of sound constitution, able to ride, active, able-bodied

and of good character. The command was to be divided into Troops. The commanding officer was to be termed "Commissioner", and have the rank of Lieutenant-Colonel. The term of service was to be for at least three years. The Force was to be a semi-military body, the immediate objectives being to stop the liquor traffic among the Indians, to gain their respect and confidence, to break them of their old practices by tact and patience, to collect customs dues, and to perform all the duties of a police force. An Act passed in 1874 prohibited the importation or manufacture in the Northwest of intoxicating liquors, and a Board of Indian Commissioners was appointed to deal with treaty-making and general policy.

The authorized strength of the Force was 300 men, but it was decided, for the time being, to form only three Troops of 50 men each. These Troops were sent that autumn (1873) over the so-called Dawson Route from the head of Lake Superior. They reached Red River in late October and proceeded to the Lower Fort Garry, or "Stone Fort", 20 miles down the river from Winnipeg.

The newly appointed Commissioner was not slow to understand that, upon penetrating the plains, the Force would have to be well prepared and that, beyond the farthest point reached by the Boundary Commission, the country would be practically unknown. When it was realized that 150 men would be insufficient for the task in hand, further recruiting was authorized to bring the Force to the full 300. The three additional Troops left Toronto in the late spring of 1874. The westward journey was made by train through Chicago and St. Paul to a point in North Dakota a few miles south of the Manitoba section of the International Boundary. From there they proceeded across the 'line' and were joined by those who had wintered at the Stone Fort.

**The Great March.**—On July 8, 1874, the entire Force of six Troops struck westward from the little settlement of Dufferin on the Red River, the headquarters of the Boundary Commission. The Boundary was to be paralleled as nearly as possible at a reasonable distance, the chief objective being the forks of the Bow and Belly Rivers in the land of the Blackfeet. Reports had it that the whisky traders from the Missouri occupied a main establishment in that area, grimly termed "Fort Whoop-Up", and that the most diabolical orgies were rampant in the Indian camps.

Day after day, the travel-worn cavalcade, accompanied by ox-carts, wagons, cattle for slaughter, several field pieces and mortars, mowing machines and other equipment, faced new difficulties. The long grind from the Red River left its impress on the little army, but the first rough experiences disclosed a stamina and endurance that augured well. After more than two months of hard travel the junction of the Bow and Belly Rivers was reached, but Fort Whoop-Up could not be found and, with provisions all but exhausted and with horses, oxen and beef cattle reduced in numbers, the red-coated troopers turned southward through immense herds of buffalo to the Sweet Grass Hills near the Boundary.

Being now within easy access of the big supply centre of Fort Benton on the Upper Missouri, the Commissioner and Assistant-Commissioner left the Force encamped and proceeded southward to purchase supplies and horses. Meantime, arrangements had been made for the construction of a headquarters barracks on the Swan River, near the Hudson's Bay Company post of Fort Pelly, far to the northeast. After returning to Sweet Grass, the Commissioner set out with "D" and "E" Troops for Swan River. He found the barracks incomplete and, leaving an officer and a Troop in charge, returned for the winter to Dufferin (later Emerson),

the starting point of four months earlier. A round trip of 1,959 miles had been completed without the loss of a single man. Meantime, under the command of the Assistant-Commissioner and guided by an efficient, half-Piegian plainsman picked up at Fort Benton, "B", "C" and "F" Troops pushed northwestward through a country teeming with buffalo to a site on Old Man's River near the foothills of the Rockies. On the way the now deserted Fort Whoop-Up was located. By mid-October the improvised buildings of Fort Macleod—the first outpost of constituted authority in the farthest west—had been hastily begun. A fortnight later, "A" Troop, which had branched northward from a point something less than midway on the main line of march, found temporary quarters at Fort Edmonton the principal Hudson's Bay Company post on the North Saskatchewan River.

The 150 men at Macleod were completely isolated and without hope of reinforcements in case of need. The inexperience of the command, the unknown strength and disposition of surrounding Indians, and the lawless activities of border freebooters involved possibilities of danger.

**Period of Consolidation in the West.**—While preparations for winter were being rushed forward under extraordinary difficulty no opportunity was lost to disperse or bring to account the hardened vendors of 'fire-water', nor to introduce civilized procedure and authority among Indians and freebooters alike. Even after the first few months, Blackfeet, Bloods, Piegiens, Sarcees—the entire Blackfeet Confederacy—as well as Crees, Assiniboines and Saulteaux, were not slow to sense the meaning of the 'scarlet tunic'. In due course, *Maintiens le Droit*—the motto of the Force—was to become a recognized axiom of the plains; to "uphold the right", an open passport to security.

Native chiefs visited the Force, first in curiosity, afterwards in full confidence of Canada's intentions. Barbarity and civilization met on common ground. At last the tall, lithe figure of Crowfoot, the great Okimaw of the Blackfeet and the head of the Confederacy, rode up with impressive dignity; he advanced and cordially shook hands. On that day Canada safely launched her ship of state upon the broad prairie ocean of the West!

It is noteworthy that, in marked contrast to the usual practices in subduing the West, there had been no tendency towards strong-arm methods, only a steady, persistent endeavour to make law-abiding citizens of both white men and natives.

By 1875, the Force had become firmly established. The bordermen responsible for the Assiniboine massacre in the Cypress Hills in the spring of 1873 were rounded up for trial and, close to the scene of their murderous revenge 160 miles east of Macleod, Fort Walsh was built and was soon as busily occupied as the parent post. In the north, Fort Saskatchewan was erected 19 miles from Fort Edmonton and Fort Calgary appeared at the junction of the Bow and Elbow Rivers midway between Edmonton and Macleod. With the coming of spring the Commissioner and headquarters staff had moved to Swan River, having established several subordinate posts towards the east in communication with Winnipeg, from which place a telegraph line was being built.

There still smouldered among many of the native-born the thought that all had not been for the best and several flare-ups occurred. In the summer of 1875, rumours spread that a separate government was in contemplation among the French half-breeds near the Hudson's Bay post of Fort Carlton on the Saskatchewan, just at a time when the Commanding Officer of the Canadian Militia was setting out from Winnipeg on a tour of inspection, particularly of the Force. An escort of

Police, consisting of the Commissioner and 50 troopers, accompanied the Commandant from Swan River. Their arrival at the scene of the threatened disaffection at once made apparent the authority of the Crown. The party proceeded westward, visited Fort Saskatchewan and turned southward to Fort Macleod. Near the latter place the Commandant held council with several hundred Blackfeet under Chief Crowfoot, who expressed great satisfaction with the sudden transformation. Subsequently, the Commandant of Militia reported: "Too much value cannot be attached to the North West Mounted Police; too much attention cannot be paid to their efficiency".

**The Influx of the Sioux.**—In 1876 the Sioux, the most powerful tribe in all the northwestern States, appealed to the Blackfeet to cross the Border and join them in warfare against the United States cavalry regiments. There was promise of booty and a prediction that the combined forces would later turn northward to wipe out the Mounted Police and all white settlers. Though persistently repeated, the request was spurned with the rejoinder that the Blackfeet were on friendly terms with the red-coats and the "Great White Mother". The Sioux threatened to attack the Blackfeet in retaliation for their curt rejection but Crowfoot was informed that in such an event the Mounted Police would fight to protect his realm. Hearing of the dignified old warrior's loyalty, Queen Victoria forwarded her grateful thanks to him.

Soon afterwards, the most ghastly clash between white men and Indians in all the history of the West stirred the civilized and Indian worlds.

Beginning with the Minnesota Indian War in 1862, hostilities had been incessant between the Sioux and the United States Army over a wide extent of the trans-Mississippi plains. In June, 1876, this bitter warfare culminated on the Little Big Horn River, 300 miles south of the Cypress Hills. Probably the largest Indian camp ever assembled on the North American Continent resulted. It was made up of Sioux under the leadership of the already renowned medicine man and necromancer Sitting Bull and the able war chiefs Crow King, Crazy Horse and Gall. Treaties had been disregarded by a feverish white invasion from the East, especially in the Black Hills of Dakota where gold had been discovered. The Sioux, thrown on the defensive, decided upon a stand. As a result a fine military organization under the command of one of the most picturesque and courageous officers—Major-General George A. Custer of the 7th United States Cavalry—was needlessly sacrificed, being wiped out to the last man. A nation's indignation was stirred to the depths and the Sioux, now scattered to the winds, turned northward for refuge, the first band of fugitives crossing the International Boundary to pitch their lodges 100 miles southeast of Fort Walsh on Canadian soil.

A supreme test now confronted the Force. Officers and men were continually called upon, on the one hand, to pacify the Indians of Canada and prevent a junction with the newcomers; on the other, to prevent the Sioux from spreading to the Blackfeet hunting grounds, already being seriously depleted of buffalo. The climax of a difficult position came with the arrival in Canada of Sitting Bull himself and his more immediate following, resulting in a total of Indians from the United States of about 5,600 men, women and children. But again, the loyalty of Crowfoot, coupled with a tireless and tactful handling of the situation by the Force, saved the day.

Four powerful and influential elements now held the stage in and about the region of the Canadian plains—the Hudson's Bay Company along the north, the Sioux under Sitting Bull near the International Boundary, the Blackfeet Confederacy towards the west, and the North West Mounted Police everywhere.

Several months before the coming of the Sioux, because of the general unrest along the Border and immediately south of the line, the precaution was taken of increasing the active strength of Forts Macleod and Walsh by the transfer of a hundred men from the northern posts. Fort Macleod now became the headquarters. Upon 214 officers and men depended the security of life and property along hundreds of miles of wild and treacherous boundary.

From Fort Walsh and a sub-post at Wood Mountain near the camp of the Sioux wanderers, the utmost vigilance was maintained. Warnings were given Sitting Bull and his following that the law must be adhered to during their sojourn in Canada. Meanwhile, governments were intensely occupied in an attempt to smooth out the difficulties. United States commissioners visited Fort Walsh to negotiate with Sitting Bull for his peaceful return to his own soil but, to the chagrin and disappointment of the officers on both sides, he showed no intention of re-crossing the International Boundary.

Shortly after the establishment of Manitoba in 1870, treaties had been entered into with the Indians adjacent to the Red River who had surrendered large portions of territory to the Crown. The Confederacy still held the country bordering the foothills thus leaving about 50,000 square miles, occupied by the Blackfeet, Bloods, Piegans and Sarcees, to be dealt with. The aim of the North West Mounted Police was to reach a legal and lasting understanding with Crowfoot and to unburden the country of Sioux aliens.

The Government early in 1877 decided that there should be no further delay in bringing the entire country within the legal scope of the administration. The Lieutenant-Governor of the Northwest Territories and the Commissioner of the North West Mounted Police were nominated to enter into negotiations with Crowfoot and his brother chiefs. A great meeting took place at the Blackfeet Crossing on the Bow River east of Calgary. At this last great assemblage of barbaric splendour, details of the most important Indian treaty in Canadian annals were agreed upon. After signatures had been affixed by the representatives of the Government and the Indian dignitaries, Chief Crowfoot testified in the following words to the trust his people placed in the North West Mounted Police: "The advice given me and my people has proved to be very good. If the Police had not come to this country where would we all be now? Bad men and whisky were killing us so fast that very few of us would have been left to-day. The Police have protected us as the feathers of the bird protect it from the frosts of winter". With the signing of this treaty, complete sovereignty of the Canadian West passed to the Dominion Government.

**The Coming of the Settlers.**—The transition from buffalo ponies to ploughshares in the West after 1873 was carried out almost wholly under Mounted Police surveillance and guidance and on the plains, from Manitoba to the Rockies, the laws of the Dominion or, as the Indians so often termed them, "the words of the Great White Mother" were thenceforward almost entirely administered by the Force. On innumerable occasions the red-coated riders showed great versatility in the performance of their duties. There were prairie fires to be battled; smuggling, especially of whisky, to forestall; customs dues to be collected; victims of winter blizzards to be succoured; starvation and other forms of privation to be

overcome; illnesses and accidents innumerable to be treated; weddings and funerals to be arranged; mails to be carried; insane persons to be taken in; lost travellers to be found; stolen stock to be returned to rightful owners; cattle- and horse-thieves, gamblers, murderers—all who participated in major crimes—to be run down; and, as settlement spread, mining, lumber and railroad construction camps to be kept under strict observation.

In 1879, Fort Walsh became the headquarters of the Force and no more picturesque pages appear in western history than those which, for the following few years, portray the change from the old order to the new in and about the Cypress Hills. By no means the least onerous duty at Fort Walsh was to see that Sitting Bull's Sioux did not use Canada as a base of operations against a friendly country, but one in which an almost continuous condition of Indian warfare prevailed.

In 1881, through the efforts of the Police and, not the least, by the sagacity of a prominent French-Canadian trader in the Wood Mountain country, the Sioux were prevailed upon to surrender to the United States authorities. The border posts of Macleod and Walsh gradually became less important and it devolved upon the Force to move the various Indian tribes to allotted reserves well away from the Boundary. Late in 1882 a new headquarters post was constructed near Pile of Bones Creek on the Canadian Pacific Railway at a point henceforth to be called Regina, and soon afterwards the personnel at Fort Walsh were transferred northward to Maple Creek also on the transcontinental track. The strength of the Force was increased from 300 to 500 and, an important innovation, a training depot for recruits was established at Winnipeg (later transferred to Regina).

**The Railway Building Period.**—When British Columbia entered Confederation in 1871, the Dominion Government guaranteed to construct a railway linking east and west. The work was begun in 1875 but the line through to the Pacific Coast was not completed until 1885. The building of this railway across the plains created many problems. The coming of some 4,000 labourers, many of them rough characters, created much ill-feeling among the Indians. There were strikes among railway labourers to be settled but, to the credit of the Force, general order prevailed. The red-coated police were even called upon to act as railway mail-clerks. New-comers were met by a strong, efficient and helpful administration. At Macleod, Calgary, Edmonton, Maple Creek, Battleford, Regina and other points, villages and towns were developing and the need for enforcement of law and order became greater and more difficult.

**The North-West Rebellion.**—After the once-dominant Blackfeet Confederacy had accepted the white man's mode of life things moved smoothly for a time though, with the disappearance of their means of livelihood, the transition from the untrammelled life of the buffalo pastures to the distasteful restrictions of the settlements and reservations was hard on Indians and half-breeds. Famine at times stalked among the native camps, attended by rampant theft and cattle-killing, but rations of beef and flour served to stay many a warlike outbreak. To the north, Crees and Assiniboines became restive. Half-breeds on the Saskatchewan, as on a former occasion on the Red River, resented the invasion of their territory by easterners. Soon there were rumblings of an approaching storm.

In the early summer of 1884 the Police detachment at Battleford first gave warning that the half-breeds of the district were demanding redress of alleged grievances. Later it was reported that Louis Riel, the leader of earlier Red River troubles, had appeared on the scene and that meetings had been held in the

settlements of Prince Albert and Duck Lake. The unrest was intensified throughout the summer and autumn of 1884. The Crees, under Chiefs Poundmaker and Big Bear, became doubly aggressive. A small Police detachment at Prince Albert, an outpost of Battleford, was increased to 21 men. Indignation meetings continued throughout the following winter. The little Police outpost at Duck Lake reported that serious trouble was inevitable. It was learned that the half-breeds had invited several bands of Cree Indians to meet at Duck Lake in the spring of 1885. A Cree chief visited the Blackfeet with exaggerated promises of great reward should the Confederacy see eye to eye with Crees and half-breeds.

On Mar. 13, 1885, Battleford reported that a rebellion was likely to break out at any moment and that the Indians would join the half-breeds. The northern detachments had to be reinforced. The Commissioner received orders to proceed from Regina northward with all available men. Accompanied by four officers, 86 non-commissioned officers and men, and 66 horses—a small force against hundreds of disgruntled natives—he made a forced march in bitter weather. Adroitly slipping past the insurgent outposts, the column reached Prince Albert learning on the way that looting had begun and that attacks on Prince Albert and Fort Carlton were imminent. By the time Fort Carlton was reached hostilities had begun. There had been a severe clash near Duck Lake on Mar. 26, between the Police, who had been joined by some Prince Albert volunteers, and a large body of half-breeds and Indians. In the face of overwhelming numbers, the Police had been thrown back with loss of life and from then on the North-West Rebellion was in full swing. Every town, city and hamlet in Canada from coast to coast was aroused by the news. A call to arms was made and for several months the Force, in conjunction with regiments from both Eastern and Western Canada, played a difficult part. The Blackfeet remained loyal and, with the defeat of the rebels, the rebellion came to an end on May 16, 1885.

The North West Mounted Police reassumed responsibility for law and order and the exercise of general jurisdiction throughout the West. To meet the demands upon it, the Force was increased to 10 Divisions and a strength of 1,000 rank and file distributed at Regina, Maple Creek, Medicine Hat, Swift Current, Moose Jaw, Broadview, Moosomin, Whitewood, Fort Qu'Appelle, Moose Mountain, Shoal Lake, Prince Albert, Calgary, Battleford, Lethbridge, Edmonton, Fort Saskatchewan, Fort Macleod and Chief Mountain. No portion of the plains remained beyond the reach of the law and, to assist in encompassing isolated and distant tracts, a number of Indians and half-breeds were employed as trailers and scouts.

**Extension of Activities, 1885-99.**—A period of rapid change and development of the West followed. Immigration increased; new settlements and mushroom villages sprang up; wheat-farming supplemented the cattle industry. The healing of scars remaining from the rebellion constituted no small part of the work of the Force and systematized patrols were begun, radiating from strategically established detachments or sub-posts.

A patrol was stationed in southern Manitoba, another near the foot of Lake Winnipeg, while over the mountains, in response to complaints that the Kootenay Indians were opposing miners and settlers coming in over the Walla Walla Trail, Fort Steele was erected. Many Indians turned to farming and ranching under Government instructors but the young braves of the Confederacy displayed a preference for horse stealing and cattle rustling. Everything was done to help, direct

and influence the multiplying citizenry of the plains. Branch railways had begun to appear. The entire west was settling down to a more prosaic, if more varied, form of life. So successfully and completely had the Force assumed control that by 1894 its strength was gradually reduced to approximately 800 men.

About this time the North began to come within the orbit of the Force. An outpost was established at Cumberland House, 200 miles down the Saskatchewan River from Prince Albert, and patrols were made into the Peace River District and along the Mackenzie River, far north of Edmonton. In the spring of 1895 the taking of a census throughout the plains was entrusted to the Police; Assiniboia, Saskatchewan and Alberta combined had a population of 65,873 whites and 7,633 half-breeds. During that year and the one following there were ample indications that much remained to be done on the plains before the Indians could be permanently regarded as peaceful wards of the nation.

*The Yukon Gold Rush.*—In 1895 the vanguard of what was to be a feverish stampede of miners and prospectors to the Yukon goldfields appeared and it became obvious that some form of police control was necessary. Leaving Regina, a detachment of 20 selected officers and men struck for the north and after 4,800 miles of travel by steamer up the Pacific Coast and the Yukon River, Fort Cudahy, a trading post at Forty Mile Creek, which then became the most northerly military outpost in the British Empire, was reached. There followed one of the greatest gold rushes in the history of the world, chiefly headed for Bonanza Creek, a fabulously rich placer. Amid a conglomeration of all classes of people, infested with criminal gangs, the little force of red-coated riders struggled to maintain order. Stirring incidents followed one upon another but, owing to strict vigilance and activity, murders and other major offences were surprisingly few.

One of the outstanding chapters in the records of the Force had begun—an epic that called for the utmost in courage and determination.

By the end of 1897 Police detachments in the area consisted of eight officers and 88 men, including dog-drivers. Detachments were placed on the Chilcot and White Horse Passes on the Alaskan Boundary, though the line was of doubtful location, and a patrol went overland from Edmonton taking a year to negotiate 1,600 miles of forest and mountain country to reach the goldfields. A Yukon Judicial District was established and the number of Police there was increased until, in 1898, there were 12 officers and 254 men doing duty in the District, despite the fact that the personnel of the Force as a whole had fallen to less than 700. In addition patrols were out in the wilderness of the Peace River and Athabaska Districts.

Headquarters for the Yukon District was Dawson City at the fork of the Klondyke and Yukon Rivers. Skagway, on the United States side of the Yukon-Alaskan Boundary, had earned the title of "the roughest place on earth". In the face of the most exacting conditions the Police prevailed, often carrying their operations across the Boundary with the tacit approval of the United States authorities. In 1898 Yukon was constituted a separate territory by Act of Parliament, under a Commissioner and Council of six members and, realizing that a tremendous task had fallen to the Police, the Government sent a special force of 200 men—drawn from the permanent soldiery of Canada—to assist until conditions improved. The population had reached approximately 20,000. The duty of carrying the mails to the scattered gold camps was undertaken by the Police, 64,000 miles being covered in a single year in the performance of this service. Meantime,

patrols using boats and dog teams branched out to Peace River, Lesser Slave Lake, Fort Resolution and Fort Simpson. At the end of the year there were 830 of all ranks in the Force.

In 1899 the South African War broke out and 245 members of the Force who were granted leave of absence enlisted in the 2nd Canadian Mounted Rifles and the Strathcona Horse. Many honours, including the Victoria Cross, were won by them. After the War, not a few seasoned westerners retired.

During the post-war period thousands of settlers were streaming westward and, within a short time, 300,000 people, most of whom were inexperienced, took up prairie homesteads. The annals attest to the adventure, hardship and dogged perseverance of the "Riders of the Plains". The modern period had begun.

**The Modern Period.**—Events followed upon events in the building up of the Dominion and the field of usefulness of the Force was continually broadened. In 1901 a Yukon census was taken, showing over 16,000 whites; the strength of the Yukon Detachment was increased to about 300. In remote portions of the north, the sphere of contact was extended into the wilderness. By 1903 several posts were opened in the sub-Arctic, including Cape Fullerton, McPherson and Herschel Island, the distribution of Police personnel now extending from the International Boundary to the Polar Sea and from Hudson Bay to the Alaskan Border. The records of this period display a splendid, if at times tragic, devotion to duty, as in the case of the following brief scrawl found in the scarlet tunic of a young constable who had perished in carrying despatches over difficult country through a murderous winter storm: "Lost, horse dead. Am trying to push ahead. Have done my best". The profound respect for the Force that had grown up with the years received official recognition in 1904, when the prefix "Royal" was bestowed by King Edward VII to mark the brilliant and steadfast services rendered; the Earl of Minto became the first Honorary Commissioner.

By 1904 there were eight Divisions, each with a headquarters post, embracing 84 detachments. The work was widely scattered, for there were now 350,000 people in the entire field of operations. British rights to the Arctic Archipelago had been transferred to Canada in 1880 and, early in the twentieth century, whalers and Eskimos in Hudson Bay and the Arctic had made the acquaintance of the Mounted Police. In 1905 the Provinces of Saskatchewan and Alberta were created to form with Manitoba a triple division of the plains, but the Force continued its duties with the Provincial Governments sharing in the cost. The Mounted Police had virtually raised the new Provinces to maturity. As evidence of the distances patrols often had to travel at this time in order to establish Canadian jurisdiction and become familiar with conditions of life, the following is related from the records: An Inspector, with a Corporal and three Constables, leaving Fort Saskatchewan on a morning in early June, 1908, headed northward to Fort Resolution on Great Slave Lake, crossed the vast, unfriendly wilderness to Hudson Bay, employed Eskimo dogs to Churchill, and eventually reached Lake Winnipeg in the following spring, a distance travelled of 3,347 miles.

The perpetrators of 44 murders were brought to justice within a period of 12 months, and the Commissioner pleaded for more men. The call was promptly met and, with the total strength, all ranks, at 763, two new detachments were established in Yukon, two in the Mackenzie River District, one on Hudson Bay and 20 at various other locations.

In 1911, Canada's red-coated troopers were the cynosure of millions of eager eyes as, with their matchless horses, they shared in the Guard of Honour at the Coronation of His Majesty King George V, at London.

**The Period of the First World War.**—Early in the War of 1914-18, the strength of the Force was increased to 1,268, but enlistments in the Armed Services soon left the strength well below the authorized number. In 1917 the Force was relieved of many of its duties in Saskatchewan, Alberta, and northern Manitoba, in order to give more effective attention to 1,900 miles of International Boundary as well as to centre attention on the alien population. The strength was allowed to fall to 656 but, despite this reduction, 26,356 patrols were made covering more than 800,000 miles. Intensive work was being done in the north under most difficult conditions at a time when British Armies were making a desperate stand in France. So general had been the desire among the men to enlist for overseas service, it became necessary for the Prime Minister to point out that the organization was more essential than ever. It was not until 1918 that the Government consented to the Police leaving for active service, when what was termed "A" Squadron embarked for France and "B" Squadron went to Siberia. So heavy were the demands on the Force that, in spite of the recruiting of several hundred additional men, the strength fell to 303—practically down to the number of the "Originals" who had struck across the plains in 1874. The Government then resolved upon a new and permanent establishment, an extension of jurisdiction and a strength of 1,200.

In 1918, the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. An extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and, therefore, the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year, the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police, with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police. New detachments were established at Port Burwell on an island in Hudson Strait and at Pond Inlet in the Eastern Arctic.

**The Broadening of Duties During the Inter-War Period.**—The strength of the Force at the time of the 50th anniversary in 1923 was 1,148. The same year, a detachment was established at Craig Harbour in Ellesmere Land—then the nearest British post to the North Pole; the location of other detachments followed throughout the North. Famous Arctic patrols that added to the lustre of the history of the Mounted Police were made in 1923-24. A 'farthest' post was established on Bache Peninsula in the remote North in 1926. Patrols entered Coronation Gulf and the Anderson River in the Arctic in 1929-30. Like the red man of the plains, the Eskimo accepted the firm but co-operative hand of authority.

The depression years following 1930 constituted a period of consolidation for the Force: this period extended until the outbreak of war in 1939. The field of responsibility was rapidly expanded outside the normal realm of police duty and the Force was fully modernized. In the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia, and Prince Edward Island the Provincial Police were replaced by the R.C.M.P. In 1932, the duties of the Preventive Service of the

Department of National Revenue were transferred to the Force. During this period, a Royal Canadian Mounted Police Museum was established at Regina, Sask., and the first copy of the R.C.M.P. *Gazette* appeared in January, 1937, to be continued from that date forward. The year 1937, was also marked by the establishment of a Scientific Laboratory at Regina and, two years later, a similar one was organized at Ottawa (Rockcliffe), Ont.

As early as 1932 the Marine Section had become a constituent part of the Force in connection with the Preventive Service; co-operation was begun with the United States Coast Guard, and an intensive war against smuggling of all kinds was waged, including curtailment of traffic in opium and other narcotics on the Pacific Coast. The Finger Print Section, centralized at Ottawa, was enlarged and extended elsewhere. In the course of law-enforcement and other duties, Police motor-cars covered 7,000,000 miles in 1936. To offset smuggling on the Atlantic Coast, two new fast cruisers, the *Macdonald* and the *Laurier*, were constructed and put into operation.

Regular annual patrols from the permanent police stations located throughout the Northwest Territories and the Arctic Archipelago became a firmly established routine in the inter-war period. Thereby some degree of governmental supervision was extended to the Eskimo and Indian populations and a measure of justice carried to the Far North. Censuses of the native populations were made by the Police and the official reports made by the officers in charge of the posts. These, together with the regular Annual Reports of the R.C.M.P., provide a valuable backlog of information regarding the people and the resources of Northern Canada. In the Prairie Provinces, especially Saskatchewan, where the depression struck with devastating force, the responsibilities of the R.C.M.P. were particularly heavy at this time.

**The Period of the Second World War.**—In the inter-war period valuable records had been built up and a good deal of survey work of various kinds had been undertaken by the Force. As a result, when war was declared in 1939, potential enemies were very quickly rounded up and protective measures were immediately adopted to guard government properties, canals, dockyards and vulnerable points across the country. Nearly 2,000 special constable guards, mostly veterans of the First World War, were enlisted to assist in these guard duties. Furthermore, manufacturing industries were given advice regarding the protection of their properties from sabotage.

Soon after the outbreak of war, the Royal Canadian Mounted Police organized from its own strength the First Provost Company for the Department of National Defence, which was almost immediately sent overseas. By Mar. 31, 1940, it consisted of 125 officers and men and was reinforced later, its highest strength being reached at Mar. 31, 1942, when it numbered 195.

The new Federal Government Departments that came into existence in the early months of the War and the large number of regulations authorized by the Government required the active attention of the Force. Additional duties related, among other things, to foreign exchange control, checking and reporting on personnel of all kinds for the Government and for private industries, fingerprinting of innumerable persons, anti-sabotage activities, assistance in air-raid precautions, enforcement of Defence of Canada Regulations, confiscation of firearms and explosives in the possession of aliens until the close of the War and re-registration of firearms under the Criminal Code. There was also a great increase in the work of the Intelligence

Branch. With the introduction of rationing the appearance of the 'black market' added another burden to an overworked Force which was not permitted to secure recruits until the end of hostilities.

When the Japanese entered the War on the side of the Axis on Dec. 7, 1941, and the removal of the Japanese from the British Columbia coast was decided upon, it was necessary to extend the scope of the registration of enemy aliens. At that time, too, the Northwest Territories and Yukon assumed new importance: the United States Government undertook construction of the Alaska Highway for military reasons; a pipeline from Norman Wells to Whitehorse was laid down; airfields were constructed; and the population of Whitehorse alone passed the 10,000 mark. In these circumstances it was necessary to increase the number of detachments and the personnel in these areas, a step which could be taken only by withdrawing needed strength from less important areas.

At the outbreak of the Second World War, the personnel and ships of the R.C.M.P. Marine Section were transferred to the Royal Canadian Navy for war duty, as previously arranged, and the small Aviation Section of the Force was transferred to the Royal Canadian Air Force. At the end of hostilities the personnel and equipment were returned to the Force. New vessels and aircraft were secured for the re-formation of up-to-date units. One vessel of the R.C.M.P., while not used in the prevention of smuggling and consequently not a part of the Marine Section, the *St. Roch*, has been employed for many years as a floating detachment in the Canadian Far North and is used to replenish the supplies of the Western Arctic detachments. It has the distinction of being the first ship to make a west to east voyage, as well as the return journey, via the Northwest Passage from the Pacific to the Atlantic. Leaving Esquimalt, B.C., on June 9, 1940, the *St. Roch*, sailing to the south of Victoria Island, reached Sydney, N.S., on Oct. 8, 1942. The return voyage was begun from Dartmouth, N.S., on July 22, 1944, and the vessel docked at Vancouver, B.C., on Oct. 16, 1944.

At the end of the War many, though not all, of the war duties of the Force were relinquished and by Mar. 31, 1946, the Special Constable Guard of veterans had been discharged.

During the War the Northwest Territories and Yukon assumed a new importance. The United States Government, with the consent of the Canadian Government, undertook the construction of the Alaska Highway for military reasons, and a pipe line from Norman Wells to Whitehorse was laid down. In addition, airfields were constructed and the population of Whitehorse alone passed the 10,000 mark. In such circumstances, it was necessary to increase the number of detachments in those areas. This highway is now known as the Northwest Highway System and is patrolled in large measure by the R.C.M. Police.

**Post-War Developments.**—Since the War the Force has been able to give some attention to the important field of prevention in relation to crime and delinquency.

At the present time the Force has two twin-engine Beechcraft, fully radio-equipped, for rapid transportation of personnel when required, an amphibious Grumman Goose to provide coverage for coastal or inland lake demands, a Norseman for use primarily in the Far North, a Cornell Trainer and a Stinson for training purposes. These aircraft are situated to the best advantage so that experts from crime laboratories may be quickly conveyed to scenes of crime and other experts to points

to give evidence, etc. They are also used in the inspection of detachments and for similar duties and, in that way, save a tremendous amount of time. The Aviation Section has one officer and 12 other ranks at present.

The *Gazette* gives up-to-date information regarding wanted and missing persons and includes instructive articles on many phases of police work. It is distributed to all police forces throughout the Dominion. Courses of instruction and training given at the R.C.M.P. Colleges are open to all police officers in Canada. These facilities, together with the R.C.M.P. museum, crime laboratories and Finger Print Section, which has extensions in various centres across the Dominion, are not merely signs of the progressiveness of the Force but assist materially in the prevention, detection and suppression of crime throughout the length and breadth of the Dominion.

The Force's "Police and Youth Movement" is an effort not only to establish better relations between the youth of the country and members of the Police Force, but to have the young people look upon the policeman as a friend: to inculcate the advantages of our free way of life, to assist people clearly to realize the privileges of democracy, to appreciate them and, if necessary, be willing to defend them. To this end specially trained officers of the Force visit schools and other centres where young Canadians congregate and, through lectures and the narration of actual experiences, they explain the work of the Police and the principles upon which it is based. The movement has wide ramifications and, handled wisely with proper direction and control, can be a potent force in lowering the rate of juvenile delinquency.

*Present Status.*—The Force as organized in 1949 is controlled and administered by a Minister of the Crown (at present the Minister of Justice). Its officers are commissioned by the Crown and for many years have been selected from serving non-commissioned officers.

In all, the Force has responsibility for the enforcement of almost 50 Federal Acts including the Indian Act. Throughout Canada it is specially empowered to deal with infractions against smuggling by sea, land and air. It enforces the provisions of the Excise Act, and is responsible for the suppression of traffic in narcotic drugs. It also assists many Departments of the Federal Government in administrative duties and is responsible for the protection of Government buildings and property and some of the more important dockyards, and has extensive fire prevention duties, especially at Ottawa. Furthermore, it undertakes secret and security services for the Federal Government. The R.C.M.P. is the sole police force operating in the Northwest Territories and Yukon. In addition to Federal duties, the Force has had agreements since 1928 with the Province of Saskatchewan, and since 1932 with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island, whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. During recent years, the Force has also entered into agreements for the policing of certain cities, towns and municipalities within the six provinces mentioned above. There are at present over 70 such agreements in existence.

The Force is divided into 14 Divisions of varying strength, including the Marine Division, distributed over the entire country. The term of engagement for recruits is five years, and the minimum age for a third-class constable is 21 years.

Recruits are selected by a Personnel Section and are trained at Regina, Sask., and at Rockcliffe, Ont. Police Colleges are also maintained at these centres, where courses of training and instruction are given to keep the Force abreast of the latest developments in criminology. In 1937, a Reserve was established which now numbers over 500: units are located principally at such large centres as Montreal, Toronto, Winnipeg, Edmonton, Calgary and Halifax, where men can be congregated easily and where instruction can be given in the evenings.

Prospective recruits should apply to:—

(a) The Commissioner, R.C.M. Police, Ottawa, Ont., or

(b) Any Officer Commanding a Division of the R.C.M. Police at the capital of any province in Canada.

Full information regarding requirements for enlistment will be provided.

*Strength of the Force.*—From a total of 300 in 1873, the Force grew to over 4,700 by 1944 and on Mar. 31, 1949, had a strength of 3,438, exclusive of civil servants. It had 862 motor-vehicles, 6 aircraft, 159 horses, 16 police service-dogs, and 281 sleigh-dogs.

The Marine Section, consisting of over 200 officers and men and 21 vessels of various sizes, operates chiefly in the Maritimes but there is a fairly strong unit on the Great Lakes, with smaller strength on the Pacific.

*Newfoundland.*—On Apr. 1, 1949, Newfoundland became the tenth province of Canada and the Royal Canadian Mounted Police extended its jurisdiction, in so far as Federal laws are concerned, to that Province. The former Preventive Service personnel of Newfoundland were absorbed into the Royal Canadian Mounted Police Preventive Service, which Service is already operating around the coast line of the new Province.

## Section 1.—The Royal Canadian Mounted Police

This Section usually outlines the present status of the Force, its organization and control, duties, services to other police forces and the assistance given in developing a healthful outlook toward law and order and responsible citizenship. These matters have all been covered in the preceding special article and, therefore, the standard material is omitted for this year.

## Section 2.—Provincial Police Forces

**Quebec Provincial Police Force.**—The Quebec Provincial Police Force is responsible for upholding law and order over the whole territory of the Province, from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence.

This Force, composed of about 700 men, is in charge of a Director who acts under direct orders from and is responsible to the Attorney-General of the Province.

To facilitate operations, the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office at Montreal and an Assistant Director in the city of Quebec. Working under these Directors are two deputies and an Inspector General.

The Police Force is divided into three sections: the detective corps, the constabulary and the traffic officers, each of which, in the two Districts, is in charge of a captain supported by a number of lieutenants and sergeants. This Police Force,

which has for years enjoyed an enviable reputation for the successful policing of Quebec's highways and for its efficiency in solving crimes, has been in course of reorganization for the past three years. During this time, the highway motorcycle patrol has been gradually replaced by a fleet of automobiles which have proved much more efficient, especially during the winter months.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station, operating on the top of Mount Royal, directs radio-equipped cars within a radius of between 60 and 80 miles around Montreal, and similar stations operating from the cities of Quebec and Three Rivers direct the mobile units operating in their respective areas. Sub-stations operate at each of the eight bridges giving access to or exit from the city of Montreal itself and a number of cars, all equipped with frequency modulation three-way radio units, patrol the surrounding country day and night.

The Quebec Provincial Police Force, well-trained and alert, is in a position to provide the citizens of the Province with the protection they have a right to expect from it.

**Ontario Provincial Police.**—The Ontario Provincial Police is maintained by the Government of the Province of Ontario under the Attorney-General's Department. The Force is responsible for law enforcement in the rural and unorganized parts of the Province, and in certain municipalities by contract.

History relates that in July, 1875, John Wilson Murray was appointed to act as "Detective for the Provincial Government of Ontario" to pursue criminals and "run them down" in their havens of refuge. Murray performed his varied duties under the direction of Sir Oliver Mowat, the Attorney-General of the Province. At the time of Confederation and the first session of the first Parliament of Ontario in December, 1867, there were a number of rural or Provincial Police. These officers were unpaid and if any remuneration was received for their services it was derived through the fee system.

In 1877 a major reform occurred when under the Constables Act (R.S.O. 1877, c. 72) the necessity for giving certain constables jurisdiction throughout the Province was recognized. County judges were authorized to allocate Provincial Constables to every county and district in Ontario.

Later, the opening up of the mining areas in the north of the Province and the accompanying lawlessness brought to the fore the realization that more adequate law-enforcement measures were a necessity. Consequently, an Order in Council dated Oct. 13, 1909, (confirmed by 10 Edw. VII, c. 39) was passed providing for the establishment of the "Ontario Provincial Police Force", to be composed of a Superintendent and such inspectors and constables as were deemed necessary. The officers were stationed throughout the northern portion of the Province and at all border points in southern Ontario. The Force was completely reorganized in 1921, under the authority of the Ontario Provincial Police Act, the appointment of a Commissioner of Police for Ontario was made and the strength of the Force considerably increased.

The Constables Act was amended in 1929 with a view to establishing closer relationship and co-operation between the Provincial Police Force and County Constabularies. Twenty-eight counties took advantage of this legislation and a member of the Ontario Provincial Police was appointed as Acting High Constable in each of these counties. In 1929 also, an Ontario Provincial Police Training School was established at General Headquarters for the tuition and guidance of recruits.

In March, 1930, the control and administration of the officers who had been enforcing the Highway Traffic Act under the supervision of the Department of Public Highways was transferred to the Department of the Attorney-General under the Commissioner of the Ontario Provincial Police. A combined Provincial and Municipal Police Training School was inaugurated at Toronto in March, 1935. This school provides advanced training in medical, legal, scientific and technical activities for provincial and municipal police officers.

By the Police Act, 1946, proclaimed Feb. 1, 1947, all former legislation and amendments dealing with constables were repealed. Under this Act, the duties and responsibilities of police forces are, for the first time in the history of the Province, clearly defined. Up to May 5, 1949, 72 municipalities have availed themselves of the provisions of the Police Act for the policing of their municipalities by the Ontario Provincial Police.

At present the Force, with a strength of approximately 1,017, consists of a General Headquarters at Toronto and 16 Districts with headquarters at Chatham, London, Dundas, Niagara Falls, Aurora, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, Haileybury, Sudbury, Cochrane, Port Arthur and Kenora. Each District has detachments adequate to meet law-enforcement requirements. A Criminal Investigation Branch of the Force, under the command of a Chief Inspector, is maintained at Toronto. This Branch investigates crimes of a major nature. The installation of one of the largest police frequency modulation radio systems in the world has placed at the command of the police a most efficient method of combating every type of lawlessness.

There were in operation in 1949 41 fixed stations and 300 two-way radio cruisers. The 250-watt stations at District Headquarters are open 24 hours daily and many of the cars are on continuous round-the-clock patrols.

**British Columbia Provincial Police.**—The organization of a permanent police force in British Columbia followed the influx of gold seekers on the Fraser River in 1858. Prior to that time police protection on Vancouver Island had been of a volunteer nature, the settlers themselves forming posses to apprehend flagrant law breakers.

On July 7, 1858, a Commissioner of Police was appointed together with a chief constable, a sergeant and four or five constables and a staff to maintain a gaol for Vancouver Island. The Governor was alive to the necessity of a police force for the gold-field area of British Columbia and Gold Commissioners were appointed under the Goldfields Act to each of whom were assigned six police officers. Instructions, however, came from the Governor.

The Commissioner continued the supervision of the police on Vancouver Island, acting at the same time as Magistrate for the community at Victoria.

It will be seen from these regulations that control of the police was somewhat divided but in 1866 the Crown colonies of Vancouver Island and British Columbia were united and the police came under one head at Victoria. New territory was opened up and local justices of the peace were empowered to swear in special constables in cases of necessity.

In these early days the duties of a constable were interwoven with the tasks of other Government branches such as the collection of revenue and other offices unrelated to law enforcement. As time went on, however, the duties gravitated to full-time police service and police districts were established under the control of a

Chief Constable who, in turn, was responsible to the Chief Inspector (later the Superintendent). With minor changes, this system continued until 1923 when, by the Police and Prisons Regulations Act 1923, semi-military ranks were adopted and the Province was divided into Divisions, Districts and Detachments for administration purposes. On Jan. 1, 1949, the Province was divided into 12 police Districts, each under the command of an Officer. Previously, there had been five Divisions, sub-divided into Districts and Detachments. Under the new system—and to keep abreast of changing conditions—District Officers Commanding, with less territory to supervise, are able to devote full-time attention to field work and supervision of police Detachments. This has greatly increased efficiency and has speeded up communication between Detachments and District Headquarters where advice and instructions can be quickly issued by the Officer Commanding.

The present strength of the Force is 490 all ranks.

A Criminal Investigation Branch is operative at Headquarters together with a training school. Shortwave radio is used extensively connecting 23 key stations throughout the Province and eight police boats patrolling the coast are also equipped with shortwave and voice transmission.

Provincial Police also assist Federal as well as Provincial Departments seeking their aid and municipalities in 1925 were afforded the opportunity to contract Provincial Police Protection; 45 cities have signed these contracts.

The Provincial Police contributes invaluable help to youth activities. Talks are given on such subjects as behaviour, good citizenship, traffic safety, firearms and explosives, camping and camp precautions, first aid, etc. Voluntary assistance is also rendered to promote sports and games, and youth organizations call upon individual members of the Provincial Police for instruction.

Police vehicles on the Lower Mainland and southern Vancouver Island are all equipped with three-way radio. New units are either in the process of installation or planned in many other sections of the Province.

### Section 3.—Municipal Police Statistics

In 1947 police statistics were collected from 191 urban centres of 4,000 population or over. The aggregate population of these centres was 5,116,427 (1941), the total number of policemen in 1947 was 7,413 or one for every 690 of the population.

A total of 589,569 offences were reported to the police, 145,887 arrests were made and 389,054 summonses were issued. More automobiles were reported recovered (8,871) than stolen (8,744). This happens when the stolen vehicle is recovered before the owner has missed it or a lost car of a previous year is found in the current year. Of the 14,945 bicycles reported stolen, 12,550 were found. The value of other stolen goods reported was \$5,640,133 and the value of stolen goods recovered \$2,649,183.

In the 72,271 motor-vehicle accidents investigated, 534 persons were killed and 17,010 injured. In other accidents reported, 599 persons were killed and 8,826 injured. Persons given shelter in police stations numbered 60,358 and 7,284 missing persons as well as 9,963 stray children were found.

## PART V.—PENITENTIARY AND REFORMATORY INSTITUTIONS

### Section 1.—Penitentiary Statistics\*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que.: the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1948, the average daily population of these institutions was 3,851 and the total net cash outlay for the year was \$4,247,884 or \$3.09 per convict per diem, compared with 3,028 average daily population and \$2,689,059 total net cash outlay or \$2.43 per convict per diem for the year 1941.

Female convicts given penitentiary sentences in the different provinces are sent to the penitentiary at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision. Female convicts in custody on Mar. 31, 1948, numbered 74 compared with 43 in 1944 and 46 in 1941.

**Movement of Population of Penal Institutions.**—Penal institutions may be classified under three headings: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatory and training schools, also with rather slow turnover; and (3) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the figures for inmates at the beginning and at the end of the year, and the number discharged as the turnover, the turnover in the fiscal year 1947-48 was: in penitentiaries, 46 p.c.; in reformatory and training schools, 266 p.c.; and in gaols, no less than 1,626 p.c. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

\* Revised in co-operation with the Superintendent of Penitentiaries, Department of Justice, Ottawa.

## Section 2.—The Ticket-of-Leave System

The Ticket-of-Leave System is described in detail at pp. 305-308 of the 1948-49 edition of the Year Book.

## Section 3.—Statistics of Corrective and Reformative Institutions

A census of corrective and reformative institutions is taken at five-year intervals, the latest being for June 1, 1946. At that date there were 28 such institutions in Canada, 25 of which reported; one institution in Quebec, one in Ontario and one in Manitoba failed to report. The reporting institutions had a total inmate population of 3,662, of whom 2,930 were males and 732 females. The males were confined in 13 institutions and the females in 12.

**5.—Inmates of Corrective and Reformatory Institutions, by Age Groups, as at June 1, 1946**

A population movement report is received yearly from penal institutions and training schools. These population changes in 1945, 1946 and 1947 are shown in Table 6.

**6.—Penal Institutions and Training School Statistics, 1945-47**

NOTE.—In certain classes of institutions the figure for “In custody at the end of year” does not agree with “In custody at the beginning of the (following) year”. The reasons for this are: changes in reporting procedures, transfers to other institutions, etc.

PART VI.—BACKGROUND OF CRIME AND DELINQUENCY  
IN NEWFOUNDLAND PRIOR TO UNION WITH CANADA

## Section 1.—Total Offences

Statistics of criminal and other offences in Newfoundland, Canada's tenth province, will be treated separately in the Year Book until such time as the Criminal Code of Canada comes into effect in that Province.

In Newfoundland indictable offences are handled by the Supreme Court both in St. John's and on circuit.

All charges involving small thefts, traffic offences, etc., are dealt with summarily by 20 local magistrates. Permission for summary trial may be sought for other offences by the police from the Secretary for Justice and the accused.

The Newfoundland Constabulary police the city of St. John's and 40 outport stations which include all the major settlements of the Island. Under the Department of Natural Resources, the Newfoundland Ranger Force, which corresponds to the Royal Canadian Mounted Police, covers the remainder of the Island and Labrador.

Table 1 shows the prosecutions for offences tried summarily for the year 1947.

1.—Prosecutions in Newfoundland for Offences Tried Summarily for the Year  
Ended Dec. 31, 1947

Abandoned.....	94	8·5			

## Section 2.—Juvenile Delinquency

The Welfare of Children Act of Newfoundland which came into effect on Jan. 1, 1945, closely resembles the Child Welfare Act of Alberta. Juvenile delinquents are looked after by the Director of Child Welfare who has also been the Judge of the Juvenile Court. Among his duties as specified in the Act are the following:—

- (a) to encourage and promote the conservation of child life in Newfoundland;
- (e) to exercise such care of and control over neglected, dependent and delinquent children as is required by this Act;
- (f) to keep records of all children who are dealt with under the Department of Public Health and Welfare;
- (g) to secure where possible through child welfare associations, children's aid societies, child welfare committees and otherwise a system of suitable foster homes, boarding homes, and probation homes adapted to the needs of children under supervision.

A juvenile in Newfoundland is an unmarried boy or girl under seventeen years of age. The Act eliminated two courses of action: birching and imprisonment. The latter is, however, provided for juveniles over fourteen years of age who commit indictable offences.

The Act provides that adults may be brought to court to account for their responsibility or contribution to the offences committed by the juvenile.

A Juvenile Court has been established in the city of St. John's.

Statistics from the Juvenile Delinquency Report of St. John's show that, during 1947, 170 juveniles (145 boys and 25 girls) appeared before the Court, as compared with 145 in 1946. This, however, does not indicate an increase in the delinquency rate but is accounted for in a number of ways. These include a more detailed follow-up of girl offenders from 7 to 25 years of age; stricter enforcement of school attendance which raised the number of truants from 9 to 23; and the fact that

probation officers actually sought out boys and girls who needed the disciplinary service of the Court. The number of serious offences decreased considerably as a result of improved community services such as boys' clubs, and boys' camps, together with the preventive services of the Court itself through counsel and probation.

## PART I.—FORMAL EDUCATION

### Section 1.—Education in Canada, 1947\*

**Organization and Administration.**—Complete educational systems from free elementary schools through grammar (high) schools to normal schools and universities were already well-established in the Maritimes, Ontario, and Quebec when the British North America Act, 1867, which united the provinces, gave each complete control over education within its borders.

In each province there is a government department to deal with educational matters. In all provinces, except Nova Scotia and Quebec, this department is represented in the provincial Cabinet and in the Legislature by a Minister of Education. In Nova Scotia the Premier is chairman of a Council of Public Instruction, while in Quebec, with its system of dual control, the Provincial Secretary represents education in the Legislative Assembly.

Although the Superintendent of Education is head of the Quebec Department of Education, a Roman Catholic and a Protestant committee constitute the Council of Education which formulates policy and superintends the administration of all educational matters. These committees are in charge of the education of Roman Catholics and Protestants, respectively. The Council, however, has no authority over many special and technical schools which come directly under various government departments.

In all other provinces, the immediate head of the Department of Education is a deputy minister or director who is a professional educationalist and advises the minister on policy. Thus there is permanency and continuity to policy despite any changes of government.

\* Prepared in the Education Division, Dominion Bureau of Statistics.

A provincial department of education is divided into several branches whose chiefs are responsible for various aspects of the work. There is usually a chief inspector or superintendent responsible for administration of the schools. There may be one for secondary schools and another for elementary schools. A Registrar is in charge of examinations and certificates and the chief accountant of financial records, including grants to schools. Most provinces also have a director of teacher-training.

In each province there is a large number of local inspectors or superintendents appointed by the provincial Department, each inspector having charge of an area with 70 to 100 schools and acting as liaison officer between the teachers and school boards and the Department. Originally their task was mainly to ensure uniformity and efficiency of instruction and the maintenance of standards in accommodations and equipment. Currently their work is becoming more and more consultative and advisory in nature. As specialists in educational science they are less concerned with inspection and more concerned in giving leadership, promoting departmental policy, and giving advice on administration, and methods and techniques of teaching. Usually there is a group of inspectors for secondary schools distinct from those for elementary schools.

During recent years there has been an increase in specialization and directors have been appointed in charge of special features such as curricula, kindergartens, auxiliary classes, agriculture, art, music, health, vocational guidance, audio-visual aids, rural education and home economics. These directors develop and supervise these features in all schools under their jurisdiction.

Until recent years local administration of education was in the hands of boards of trustees with jurisdiction over a school section or district so limited in area that, in rural sections, no child would have farther than two or three miles to go to school. Towns and cities were natural units. For some years now there has been a movement towards the consolidation of these small districts into larger units. The idea is not a new one to Canada, having been proposed by at least one leading Canadian educator a hundred years ago, and some units in the form of consolidated schools have existed for over 30 years. In some provinces the section board is dissolved on entering a larger unit; in others, it is retained with such minor powers as will maintain an active local interest in the schools. In all provinces west of the Maritimes, the scattered settlements of the northern areas operate as isolated districts.

Prince Edward Island with 462 local school boards is the only province where no large units exist although legislation has been passed authorizing the establishment of large high-school districts.

In Nova Scotia, beginning in 1942, municipal school finance units have been organized on a county basis, each containing about 100 rural schools. Cities and towns remain outside these units. This has reduced the number of financial units from over 1,700 to 24 rural and 45 urban. The local boards were retained with greatly reduced powers.

New Brunswick has followed the same pattern. Fourteen of the 15 counties are organized so that for financial purposes there are now 14 rural and 22 urban boards in place of 1,350.

Ten Protestant central school boards have been formed in Quebec and further reduction in the number of Protestant boards has been accomplished by unions and annexations. One Protestant county high-school district has also been authorized. Roman Catholic schools in Quebec are usually organized with the parish as the unit of administration.

So far, Ontario has organized areas for elementary schools separately from those for secondary schools: 3,070 local public school sections, 53 p.c. of the total, have been organized into 499 township areas. In the more densely populated southern portion of the Province there is usually more than one area in a township. A town or village may be included in an area. There are 20 union Roman Catholic Separate School boards corresponding to township areas. There are approximately 90 larger high-school areas. The average area cuts across municipal boundaries to include 200 square miles of area, a high school population of at least 300 and an assessment of approximately \$7,000,000.

Manitoba has 101 consolidated school districts, including Miniota, a municipal school district. One experimental larger unit, the Dauphin-Ochre River school area, was formed in 1947.

Saskatchewan has organized over 3,000 districts into 45 units; there are still 1,399 districts to be organized. Here, as in the Maritimes, the local board has been retained with minor functions. Schools in towns, separate schools and consolidated schools may join a unit.

Alberta took the lead in establishing the larger unit and has 57 made up of 3,701 of the 3,493 active local school districts. The average division covers some 2,000 square miles with 70 teachers and 1,500 pupils. Many villages and towns are included.

British Columbia, following the advice of the Cameron Report, is organized into 74 larger administrative units and 15 unattached districts. Schools in cities and towns are included in units.

Generally speaking, school trustees are elected by the ratepayers for a term of two or three years in such a manner that only a portion of a board retires each year. In a few cases, such as the high school boards of Ontario, members of the boards are appointed by the municipal councils.

Separate schools, mainly Roman Catholic, exist in Ontario, Saskatchewan and Alberta. There is no difference between these and public schools except that the teacher is of the same religion as the school authorities, and more attention is given to religious instruction.

**Financing the Schools.**—The income required to support these public elementary and secondary schools is derived almost wholly from local taxation and provincial grants.

Fees for elementary schooling may be charged in Quebec. In some of the other provinces fees are charged for secondary grades but, except where in lieu of taxation, they are quite nominal. The total amount of fees for all provinces, exclusive of Quebec, is under \$200,000.

Assessment for school purposes is the valuation of land and buildings (or improvements in some cases) and usually some other factor such as personal property, business or mines income, etc. As these assessments are made by the local municipalities the introduction of the larger unit has done much to equalize the burden of taxation.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. School boards in Quebec and some boards in other provinces have the power to levy and collect taxes for school purposes.

Each province has its own method of apportioning grants to local school boards and these schemes have all been more or less radically changed in the last three or four years so that between 1941 and 1947 the provincial share of the expenditures of the school boards has risen from 17 p.c. to 34 p.c. The proportion in each province is as follows:

<i>Province</i>	<i>1947</i>	<i>1941</i>	<i>Province</i>	<i>1947</i>	<i>1941</i>
	<i>p.c.</i>	<i>p.c.</i>		<i>p.c.</i>	<i>p.c.</i>
Prince Edward Island.....	63	60	Manitoba.....	14	15
Nova Scotia.....	41	19	Saskatchewan.....	27	24
New Brunswick.....	28	18	Alberta.....	29	20
Ontario.....	40	10	British Columbia.....	41	30

Total provincial grants to school boards amounted to \$21,000,000 in 1941 and \$53,000,000 in 1947.

Provincial grants are of two types: (1) The basic grant may be calculated on cost, an amount per classroom, a basic minimum cost, salary and qualifications of teacher, average attendance, etc. All provinces adopt some means of increasing equality of opportunity by favouring the poorer areas over the richer ones. (2) Special grants are paid for such features as transportation, music, arts, and crafts, special classes, equipment, building costs, night schools, etc. They loom largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

While all operating costs have increased since the years before the War the major increases have been in teachers' salaries which amounted to \$52,000,000 for eight provinces in 1936 and reached \$96,000,000 in 1947, and in the amount spent on new buildings and equipment which rose from \$3,250,000 in 1944 to \$8,500,000 in 1946 and \$17,000,000 in 1947 for the provinces reporting—Alberta, Saskatchewan, Manitoba and Ontario. The proportion provided by borrowed money rose from 30 p.c. to 60 p.c. in the same period. This increased expenditure was due to three causes: (1) a back-log of required construction at the end of the War; (2) the need for additional accommodation to meet the needs of increasing enrolment and new concentrations of population; and (3) new construction required following the establishment of larger units of administration and the movement towards larger centralized schools and composite high schools.

**Schools and Curricula.—Primary.**—The primary division of all Canadian schools terminates with grade eight and the secondary begins with grade nine. In British Columbia and Alberta, in the city of Winnipeg and in certain Ontario cities Grades VII and VIII have been combined with Grades IX and X to form intermediate schools or junior high schools.

In all large cities and in the larger towns of Ontario kindergartens are operated as part of the primary school. Most of these are for five-year-olds though a few operate classes for four-year-olds as well.

Most children begin Grade I at age six or early seven and many pupils complete the eight grades in seven years. Attendance is compulsory from the age of eight to the age of 14 with attendance to age 16 being required of urban pupils in some

provinces. Attendance is enforced by local attendance officers and the monthly Family Allowance payments may be stopped if a child fails to attend school without sufficient cause.

In the primary schools emphasis is on the fundamental subjects—reading, writing, arithmetic, health and social studies—with varying additions of science, arts and crafts, music, home economics and shopwork. In rural areas, the science may have an agricultural bias. Despite the fact that each province has its own curriculum and textbooks vary there is considerable uniformity in subject matter and the grade placement of various topics and projects. In methodology, the enterprise or activity technique has largely replaced the drill and recitation method.

*Intermediate.*—The curriculum of these schools includes pre-vocational and exploratory courses giving a greater variety than in the general primary school. They provide a transition between the primary and secondary levels and there is evidence that they tend to hold many pupils in school a year to two years longer than where they do not exist.

*Secondary.*—The traditional secondary school course is directed towards the needs and prerequisites of the universities. The provincial departments authorize texts, prescribe the courses and set examinations. Academic courses and examinations are usually set in consultation with the universities of the province.

Since the end of the First World War, increasing attention has been paid to the needs of those wishing to enter commerce, industry or the trades and to this end at least four separate paths are being followed. One way is by offering many diverse subjects outside a central core of English, mathematics and social studies all within the high-school course. This is the plan in British Columbia and Alberta. In New Brunswick and Ontario the emphasis is on the composite high school where, after the first year, the student enters upon an academic, commercial, industrial or agriculture course. In most of the large cities there are commercial high schools and technical high schools where the students are separated not only by course but by schools. In these large technical schools courses are given leading to matriculation for students desiring to take a university course in engineering, nursing, etc. Quebec, in turn, has a considerable number of specialized schools of agriculture, household science, arts and trades, in addition to ordinary technical schools.

*Advanced Technical Schools.*—In several provinces there are technical schools of the junior college level. In Alberta there is the Calgary Provincial Institute of Technology and Art, in Manitoba a Technical Institute at Winnipeg. There are four technical institutes in Ontario, the Provincial Institute of Mining at Haileybury, the Provincial Institute of Textiles at Hamilton, the Lakehead Technical Institute, Port Arthur and the Ryerson Institute of Technology at Toronto. There is also an agricultural school at Kemptville.

Quebec has several institutes of fine arts and graphic arts, one for forest rangers and another for paper-making. Recent legislation provides for the establishment of technical institutes in Nova Scotia.

*Teacher-Training Schools.*—In all provinces (except Alberta and Quebec) teachers for the primary schools are trained in the provincial normal schools. Most provinces now require training two or more years beyond matriculation.

While some of the Catholic normal schools in Quebec are operated by the Province, others are operated by religious orders and one by Laval University. The Protestant normal school is at Macdonald College of McGill University.

In Alberta all teacher-training is concentrated in the Faculty of Education of the University of Alberta where prospective teachers may take a two-, three- or four-year course. Secondary school teachers receive a four-year course.

Secondary school teachers are required to have an undergraduate degree in Arts and Science plus a year's professional training as in Nova Scotia and Ontario or receive professional training as part of the university course as in British Columbia and Saskatchewan.

Teachers of industrial subjects are required to have considerable trade experience before taking professional training. Special training is given teachers for kindergartens, handicapped children and such special subjects as music, home economics, arts and crafts, etc.

*Special Features.*—The value of teachers trained to give advice on the many problems involved in choosing a vocation has become more widely recognized, and increased attention is being given in most secondary schools to vocational guidance. Not only counselling, but aptitude tests and lectures dealing with various trades and professions are being made available to the students.

In the universities counsellors were first appointed at the request of the Federal Department of Veterans Affairs to advise student veterans. In some institutions this has been extended to all students.

The film, phonograph and radio are becoming standard educational equipment. Most of the departments have set up a directorate to arrange for equipment grants and to supervise the establishment of the necessary facilities in the schools. The National Film Board has a series of educational films available for all Canada's schools and some of the provincial departments and the more important public libraries have film libraries. The phonograph is being used for language-teaching as well as for music instruction. The CBC provides special educational broadcasts and relays exchange features from the BBC and the United States networks.

Special methods are adopted to bring education to the children of remote areas. All provinces have correspondence branches which provide instruction at the primary and secondary school levels. These courses are also used by secondary school students who require particular subjects not taught in the local schools. Ontario has a number of railway school cars working in conjunction with the correspondence courses. Each car has an itinerary of some 200 miles on the northern railway lines. A car is "spotted" on a siding and instruction is given the pupils of the area for about two weeks when the car moves on to another siding.

**Enrolment.**—At the secondary school level enrolments have been increasing since the school year 1944-45 except in Saskatchewan. Birth registrations of the past few years indicate that by 1953-54 the enrolment in Grades I to VIII will have increased from 1,712,662 to over 2,307,000, a total of 595,000, and there is every indication that the increase may amount to 800,000 by 1960. A decline may set in shortly after that. An increase of 800,000 is equal to over 45 p.c. of the total enrolment in the elementary schools of Canada and is 140 p.c. of the elementary enrolment of the largest province—Quebec. Grades above Grade VIII will begin to feel the effects between 1953 and 1955.

Other factors, too, are operating to increase enrolment. The introduction of Family Allowances in 1945 while showing its effects on schools most clearly in improved attendance has also kept in school to the legal age limit many pupils who were leaving from a few months to two years before they were lawfully entitled to leave.

Increasing emphasis on the holding power of schools, increased transportation facilities at public expense, the building of dormitories in some provinces, the larger unit of administration, the establishment of junior high schools and composite schools, the wave of post-war immigration from Europe and the British Isles—all these are operating to increase school enrolments.

On the assumption that there should be one teacher for every 30 pupils, an additional 18,200 teachers will be required by 1953-54. This takes no account of the present shortage and is indicative of future requirements in classrooms, equipment and capital funds not to mention revenue for operating purposes. In some provinces it is certain that the whole structure of school finance will have to be modified, if not reorganized, to cope with the increased cost.

**Teachers.**—The post-war years have found Canadian schools with a shortage of teachers of such proportions that, in 1946, one out of every ten teachers in all provinces (except Quebec) was teaching on a permit. However, in 1947 there was a decline of 246 in the number of permits issued. Despite the highest salary levels in history teachers continue to leave the profession in large numbers. Data for Ontario for 1947 showed 31 p.c. of the loss going to other occupations and 30 p.c. leaving to be married. On the other side of the picture, beginning with 1946, enrolment in teacher-training schools began to increase.

About three-quarters of the 70,000 teachers in publicly controlled schools in Canada are women. Before the War men made up approximately 29 p.c. of the total. The proportion of men to women in secondary schools is greater than in primary schools.

In all provinces minimum salary levels are established and in most cases salaries are above these minima. Of recent years salary schedules have become established on the basis of the larger unit or even of a province as a whole. Nova Scotia has established a schedule based on experience and qualifications and in Saskatchewan over 75 p.c. of the teachers are employed on the basis of a schedule for rural and village schools.

All provinces have in effect contributory pension schemes for teachers. Some provinces pay into the fund an amount equal to that contributed by the teachers. Teacher contributions vary from 2.5 p.c. to 5 p.c. of annual salary. Retirement on pension is usually provided for at age 60 or 65. Most schemes provide for pension in case of disability.

**Private Schools.**—Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec, they receive no support from public funds.

Outside of Quebec, 272 academic primary and secondary private schools were reported in 1947. One-half of these were Catholic, 21 p.c. Protestant, 1 p.c. Jewish, and 28 p.c. non-denominational. Enrolment decreased from 39,581 in 1944 to 37,995 in 1947 despite the fact that the 1947 figure included 10 additional schools. The number of teachers decreased from 2,202 to 2,089. This decrease in enrolment took place at both elementary and secondary grade levels.

Instruction is similar to that given in public schools except that more opportunities may be given for music, art, etc. In schools under religious control there is greater emphasis on religious instruction. They are financed largely from fees,

legacies, gifts, or by religious orders. Fees range from inexpensive institutions to those charging \$800 to \$1,000 per year. In most provinces there is some form of inspection or regulation by the provincial department of education.

Some 160 private business colleges (more than half of these being in Ontario) give training for office and secretarial positions. Enrolment in these schools has been increasing and was 15,015 for full-time students in 1947 as against 10,384 in 1944. The number of part-time students decreased from 1,801 to 1,410 in the same period. In 1947 there were, in addition to the above, 14,525 enrolled in evening classes. About 70 p.c. of the students attending these schools are girls.

### Subsection 1.—The Educational System of Newfoundland at the Time of Union\*

The first recorded school in Newfoundland was established at Bonavista in 1726 by the Rev. Henry Jones, who had been sent to the colony by the Society for the Propagation of the Gospel in Foreign Parts. It was not unfitting that the first school in Newfoundland should have been set up in the town of Bonavista where Cabot first landed. However, it was 1836 before the Government assumed definite responsibility for public education. In that year Newfoundland's first Representative Government allocated £2,100 sterling for education and in that year, too, Newfoundland's first Education Act was passed.

Between 1726 and 1836 the Church of England, the Roman Catholic Church and, later, the Methodist Church established schools in various parts of the Island and, when the first education grant was voted, part of it was divided among the denominational schools. The 1836 Act, however, was undenominational in principle but, since apparently undenominational schools were not popular, an amendment to the Act in 1843 recognized a two-way system and made provision for the division of education grants equally between Protestants and Roman Catholics. At that time the country was divided into 36 educational districts—18 Protestant and 18 Roman Catholic. There followed a period of much educational unrest during which the legislation had to be amended many times. Finally, in 1874 an Education Act was passed recognizing the denominational system which had grown logically and inevitably out of the will of the people. The 1874 Act, though amended five or six times between 1876 and 1927, remained basically in force until, in 1935, a further amendment radically changed the Act as in force at the time.

The Act, as operative in 1927, was a lineal descendant of the 1874 Act. It made provision for a uniform system of education within a denominational framework. Policies were formulated and controlled by a body known as the Bureau of Education, the actual administration of the Department being carried out under the direction of the Secretary for Education.

The 1935 amendment replaced the Bureau of Education by a Secretary responsible to the Commissioner for Home Affairs and Education, and two Assistant Secretaries whose functions were not defined. Later, a third official of assistant secretarial rank was appointed. The three Assistant Secretaries, while chosen on a denominational basis, were not official representatives of the religious bodies to which they belonged.

A body known as the Advisory Committee (consisting of six members: two Church of England, two Roman Catholic and two United Church) was appointed to maintain a channel of communication with the major denominations and the

\* Prepared by G. A. Frecker, LL.D., B.E., B.A., Secretary for Education, Department of Education, St. John's, Newfoundland.

local school boards which were denominational. This Committee, however, was not in close contact with the problems of the Department and proved to be ineffectual.

In 1939 the Education Act was again amended bringing back a Departmental organization similar to that existing prior to the changes made in 1935. It established a Council of Education with a Commissioner and Secretary, three Assistant Secretaries (now known as Executive Officers) and a member of the Salvation Army, each officially representing one of the large religious groups of the country. The Salvation Army representative has since become the fourth Executive Officer in the Department. The 1939 establishment is still operative but in 1944 three Assistant Executive Officers were appointed, and in 1946 an Assistant Secretary was added to headquarters staff.

The Council of Education is responsible for educational policy, subject to the approval of the Minister, and the Executive Officers who, outside of the Council, are regular civil servants, carry out, under the supervision of the Secretary, the Council's policies affecting their respective denominations. In effect the Executive Officers are denominational directors of elementary and secondary education. Since Apr. 1, 1949, when Newfoundland became the tenth province of Canada, the Minister of Education has taken the place of the Commissioner and the title of the permanent head of the Department has been changed from Secretary to Deputy Minister.

**Elementary and Secondary Education.**—In order to have a correct perspective with regard to the denominational system of education functioning on the elementary and secondary school level in Newfoundland, it is necessary to realize that the country was served by church schools for at least 100 years before the State took any part in public education. Furthermore, the population, which is spread out in a thin ribbon along 6,000 miles of coast line, is to a great extent still distributed denominationally. A survey made in 1944 by the supervising inspectors showed that less than 15 p.c. of the settlements were affected by a duplication or multiplication of school services, and that approximately one-half of the 36 p.c. of the population affected was located in the larger settlements, such as St. John's, Grand Falls and Corner Brook, where a number of schools would be necessary whatever the system.

In Newfoundland there is really but one system of education operating through a number of branches. All schools follow the same curriculum. All secular teachers follow the same education courses. Certification of teachers is uniform. Except for religious instruction and basic readers, all schools follow the same prescribed textbooks. The same policy of supervision is carried out in all schools.

The following statement gives summary education statistics for the year ended June 30, 1948:—

Population.....	No.	320,000	Median salary paid teachers.....	\$	981.32
Enrolment in schools.....	"	72,940	Compulsory school age.....	yr.	7 to 14 <sup>1</sup>
School districts.....	"	250	Appropriation for all educational services (1947-48).....	\$	3,662,959
Schools.....	"	1,200	Appropriation for elementary and secondary education services.....	\$	3,367,011
One-room schools.....	"	796	Per capita Government expenditure on education (all services).....	\$	11.45
Classrooms.....	"	2,240	Per capita Government expenditure, elementary and secondary education	\$	10.52
Supervising inspectors.....	"	22	Per pupil Government expenditure, elementary and secondary education	\$	46.16
Total teachers.....	"	2,278			
Uncertificated teachers.....	"	393			
Teaching days required in school year.....	"	190			
Average attendance.....	p.c.	76.4			

<sup>1</sup> A child reaching his 14th birthday during a school year must remain in school for that year.

The schools of Newfoundland operate on an eight plus three plan, eight grades for primary and elementary education and three for high school. Pupils completing the high school course may obtain a school-leaving Grade XI diploma or a Junior Matriculation diploma. To obtain the former a pupil must pass in English and any other four subjects from a list of about 13 subjects. To matriculate the candidate must pass in English, history, mathematics, a foreign language, a science and one other subject, gaining not less than 50 p.c. in each subject.

**Council of Higher Education.**—Newfoundland's external examinations are conducted by a body corporate established in 1892 and known as the Council of Higher Education. At the present time this body conducts external examinations in Grades IX, X and XI. The Council has been a member of the Common Examining Board of the Maritime Provinces and Newfoundland from the inception of that Board's operations in 1932. A small number of Newfoundland schools take the Nova Scotia Grade XII examinations. The Council's Junior Matriculation diploma qualifies Newfoundland students for admission to the first year of most Canadian universities as well as to the first year of the Newfoundland Memorial University College.

**Memorial University College.**—The Memorial University College was founded in 1925. It is recognized by such institutions of higher learning as Dalhousie, McGill, Toronto, Harvard and Columbia. The College has established a reputation for maintaining high standards of scholarship. It offers the following courses: two years of arts and science; two years pre-medical; a four-year education course (only three years given at present); a three-year pre-engineering course; and a two-year course in household science. There is a growing demand that the institution be granted a charter and become a full degree-conferring university.\*

**Adult and Visual Education.**—One of the major divisions of the Department of Education is that of Adult and Visual Education. Adult education is broadly conceived and takes many forms. It combats illiteracy and organizes study groups and women's clubs for the purpose of encouraging enlightened civic and self-interest among the people. It carries on regular night classes for adults whose scholastic requirements vary from Grade I to Grade XI. The work of adult education has been greatly handicapped in recent years because of lack of trained field workers, but certain activities have prospered in spite of all difficulties. This is particularly true of the Adult Centre at St. John's.

Visual education has advanced considerably in recent years. The demand for films and film strips is very high. Unfortunately communications throughout the country are too meagre to allow more than a superficial distribution to coastal settlements. However, in the past three years 60 schools have been equipped with projectors and the Division library contains some 1,400 films and 5,000 strips.

Government expenditure on the adult and visual education services for the year ended Mar. 31, 1948, amounted to \$83,227.

**National Handicrafts.**—The Division of National Handicrafts is administered by the Department of Education. The Handicraft Centre, located at St. John's, serves the whole Island by promoting an interest in handicrafts as a cultural and economic asset to the people and to the country. Young people from the outports are trained in such skills as woodworking, wood carving, leather craft, pottery, rug designing and hooking, stone polishing, weaving, dressmaking and cooking,

\* Since the above was written full degree-conferring powers were granted by the Charter conferred by the first session of the Provincial House of Assembly, July, 1949.

and are later assisted by way of loans in carrying on the craft or crafts they have learned. Up to June, 1949, some 1,800 persons had taken advantage of the services of the Handicraft Centre. Government expenditure on handicrafts for the year ended Mar. 31, 1948, was \$58,817.

**Vocational Education.**—Only the smallest beginnings have been made in this very important branch of modern education. It is true that large numbers of Newfoundland boys learn carpentry, motor-mechanics, sail-making, boat-building, house-building and many other trades from their fathers in the outports. But this is less true to-day than it was a generation ago, and the Province is suffering from a lack of well-trained and well-educated craftsmen and tradesmen.

The Government organized the St. John's Vocational Institute in 1944 for the benefit of war veterans. The civil re-establishment program ended in December, 1948, and since then the Institute has been carrying on as a trade school for civilians. The Vocational Institute was transferred from Home Affairs to Education on Apr. 1, 1949. The educational authorities visualize a vocational education service patterned on that existing in New Brunswick. However, at the time of writing (June, 1949), the life of the Institute has not been guaranteed beyond September, 1949, and only \$30,000 has been allocated in the 1949-50 budget for its operation.

**The Public Libraries.**—The public libraries of Newfoundland are administered by the Public Libraries Board (a voluntary organization of 25 citizens) which operates under the Public Libraries Act. The public library vote is carried as a regular sub-head of the Department of Education estimates and its communications with the Government are channelled through that Department, which exercises general supervision over expenditure without interfering in the internal affairs of the library, whose policies are subject to the approval of the Government.

At the present time, in addition to the Gosling Memorial Library at St. John's, there are 27 regional libraries, strategically located throughout the country, and a travelling library, with headquarters at St. John's, circulates books in remote districts. The total book stock of all three services is 87,000. The expenditure of public funds on library services for the year ended Mar. 31, 1948, amounted to \$69,648.

### **Subsection 2.—Education in the Northwest Territories\***

Educational matters relative to the Northwest Territories come under the jurisdiction of the Northwest Territories Council. The education of the white, native, and half-breed children in the Mackenzie District is carried on at residential and day schools operated under the supervision of the Federal Government by the mission of the Church of England in Canada at Aklavik, and by the missions of the Roman Catholic Church at Fort Resolution, Fort Providence, and Aklavik. In addition, Government day schools are located at Port Brabant, Fort Norman, Port Radium, Fort Smith, and Fort Simpson, and are being established at Aklavik, Fort Resolution and Coppermine. Located in the principal settlements, the residential schools were constructed by or with the assistance of the Federal Government, and their maintenance is assisted by annual grants from the same source. In addition, the Northwest Territories Administration furnishes school supplies and equipment. The Government day schools are completely maintained by the Federal Government, a number being operated by the Indian Affairs Branch of the Department of Mines and Resources and a number coming under the jurisdiction of the Northwest Territories Administration.

\* Prepared under the direction of the Deputy Minister, Department of Mines and Resources, Ottawa.

A fine modern elementary and high-school building has been completed at Yellowknife, and is designed to serve children residing at other settlements in the Mackenzie District. The school at Yellowknife is the only one in the Northwest Territories maintained chiefly by local taxation and administered by a local school board. A non-denominational school at Fort Smith is maintained by fees and grants.

Elementary and high-school students in remote areas of the Territories have access to correspondence study courses issued by the Alberta provincial educational authorities, and costs in this connection are borne by the Administration.

A Superintendent of Education for the Mackenzie District has been appointed. His headquarters are at Yellowknife, N.W.T., and he will make regular inspections of the schools throughout the District.

The administration of education in the Northwest Territories is being re-organized and new facilities made available. Among the improvements inaugurated recently is an extensive circuit for the regular distribution of educational films and special radio broadcasts to the classrooms. Present plans include the provision of additional equipment and supplies, increased attention to methods of instruction, and the establishment of new day schools in areas where facilities for educational instruction are not as yet available.

The Department of Mines and Resources is working in co-operation with the Department of National Health and Welfare in the development of an educational and welfare program designed to make additional facilities available to those who live in the Territories. The new schools, under the Northwest Territories Administration and the Indian Affairs Branch of the Department of Mines and Resources, are to be staffed by a special classification of welfare teachers, who will carry on welfare work in the communities in addition to their regular teaching duties.

Eskimo children in the Eastern Arctic are given some education at mission day schools. Because of their nomadic tendency, however, Eskimos seldom remain very long at the settlements and the periods available to the missions for teaching the children are therefore comparatively short. Eskimo children along the Western Arctic Coast and in the Mackenzie Delta attend the mission residential schools at Aklavik. Government day schools for Eskimo children are being established at Chimo, Que., Coral Harbour on Southampton Island, Port Harrison, Que., and Lake Harbour on Baffin Island. The Eskimos of the Eastern Arctic have mastered a system of syllabic writing (geometric characters similar to a type of shorthand), which most of them can now read and write proficiently. Advantage of this has been taken to provide educational material in the Eskimo language giving advice on health matters, hygiene, and native economics for the benefit of both children and adults.

## Section 2.—Schools, Universities and Colleges\*

This Section summarizes the enrolment in all the educational institutions in Canada which include four types: provincially controlled schools, privately controlled schools, universities and colleges and Federal Indian schools. The provincially controlled schools are the most important group and account for about 90 p.c. of the total enrolment shown in Table 1. A system of public elementary and secondary education, financed mainly by local school authorities but assisted

\* Revised, except where otherwise indicated, in the Education Division, Dominion Bureau of Statistics.

by provincial grants, has developed in each province. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the remaining three provinces. (Agricultural schools and colleges are dealt with at pp. 203-213 of the 1943-44 Year Book.)

<sup>1</sup> Schools for the blind, deaf, or mentally defective. These are boarding schools and many of the pupils are from provinces other than the one in which they are at school. Based on estimates. <sup>2</sup> Includes also those in the departmental summer schools for teachers in British Columbia, not held at universities or colleges. <sup>3</sup> Includes 1,359 in ordinary day schools for Yukon and the Northwest Territories.

<sup>4</sup> Included with "Universities and Colleges — Preparatory courses".

<sup>5</sup> Includes 458 in Federal Indian schools for Yukon and the Northwest Territories. <sup>6</sup> Includes 24,000 population for Yukon and the Northwest Territories.

### Subsection 1.—Federal Indian Schools

The administration of Indian Affairs by the Indian Affairs Branch of the Department of Mines and Resources is dealt with in Chapter XXIX.

Education work carried on by the Federal Government for the benefit of Indians has developed greatly in the post-war period. In the year ended Mar. 31, 1949, a total of 386 Indian schools were in operation, including 72 residential schools for Indians with an enrolment of 9,368 and 309 day schools for Indians with an enrolment of 12,615. This figure included 104 Indian pupils enrolled in five combined public and Indian schools. The number of Indian children attending provincial schools has increased greatly and in 1948-49 totalled 1,302. This means that the number of Indians enrolled in schools of all kinds in 1948-49 was 23,285.

An active building program has helped to bring about this increased enrolment. Tuition grants to attend high schools and universities are being paid to many students, and in 1948-49, 661 Indians were enrolled in secondary schools of various kinds. The total amount spent on Indian education in that year was \$5,225,000.

### 2.—Enrolment and Average Attendance at Indian Schools, Years Ended Mar. 31, 1940-49

NOTE.—Figures for the years 1916-29 will be found at p. 1063 of the 1940 Year Book, and for 1930-39 at p. 929 of the 1942 edition.

Year	Residential Schools		Day Schools <sup>1</sup>		All Schools

1949.....	9,368	8,345	12,615	10,414	21,983	18,759	85.3

<sup>1</sup> Includes enrolment and attendance of Indians in combined public and Indian schools.

Enrolment by provinces for the year 1948-49 was as follows: Prince Edward Island, 47; Nova Scotia, 616; New Brunswick, 372; Quebec, 1,916; Ontario, 5,417; Manitoba, 3,101; Saskatchewan, 2,871; Alberta, 2,267; British Columbia, 4,585; Yukon, 273; and the Northwest Territories, 518.

### Subsection 2.—Provincially Controlled Elementary and Secondary Schools\*

**Enrolment and Attendance.**—Enrolment in provincially controlled schools is given for the latest school year available in Table 1 and average daily attendance is shown in Table 3. The average daily attendance figures are more comparable, as between provinces, and probably more significant for most purposes than those of enrolment.

\* Day and technical schools only.

### 3.—Average Daily Attendance in Provincially Controlled Schools, by Provinces, School Years Ended 1938-47

NOTE.—Figures for years prior to 1911 will be found at pp. 839-840 of the 1932 Year Book, those from 1911-25 at p. 963 of the 1937 edition and for 1926-37 at p. 1028 of the 1946 edition.

**Teaching Staffs.**—The teaching staffs of day schools under provincial control in Canada consisted, in 1947, of 51,683 teachers (13,058 males and 38,625 females). Table 5 gives statistics of rates of salary by provinces, except for Quebec for which comparable data are not available. A separate report, "Teachers' Salaries and Qualifications in Eight Provinces, 1947", deals in detail with the classification of teachers, their teaching experience and rates of salary paid.

### 5.—Teachers in Provincially Controlled Schools Classified According to Salary, by Provinces, School Year 1946-47

NOTE.—Comparable figures for Quebec are not available.

**Financial Statistics.**—Table 6 presents a comparable statement of the finances of the Boards operating provincial schools so far as this can be done with existing records.

### 6.—Financial Support of Provincially Controlled Schools, by Provinces, for Provincial Fiscal Years Ended 1939, 1946 and 1947

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total net debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per annum. Figures for 1914-25 will be found at pp. 985-987 of the 1936 Year Book and those for 1926-45 in the corresponding tables of subsequent editions.

<sup>1</sup> Net figures, after deduction of sinking funds, except for British Columbia, 1939, for which the gross figure is given. <sup>2</sup> Includes contributions to teachers' salaries in the Maritime Provinces and, in New Brunswick, grants made to schools by the Vocational Education Board. <sup>3</sup> Includes amounts raised by counties and, in Ontario, the township grants on salaries of rural public school teachers. <sup>4</sup> Latest available figures. <sup>5</sup> Day school grants only. <sup>6</sup> In 1946 school districts were amalgamated into larger administrative units.

**Subsection 3.—Private Elementary and Secondary Schools**

Enrolment in private elementary and secondary schools in the eight provinces, other than Quebec, has increased during the past ten years at about the same rate as the total population. In 1938 there were 34,109 pupils enrolled, 8,679 of whom were in residence, while in 1947, 37,995 were enrolled and 11,517 were in residence. Girls were slightly in the majority in 1938 but were about one-third above the enrolment of boys in 1946. In 1938 there were 2,018 teachers, 570 of whom were males and in 1947 there were 2,089 teachers of whom 606 were males and 355 were classed as part-time teachers.

The age of the school population in private schools does not follow the usual pyramid form found in the public schools. It increases regularly from age 6 to age 15 where it is two and one-half times as great. Almost 10 p.c. drop out at 16, 25 p.c. of the remainder at 17, 40 p.c. the following year and for ages 19 or over the number is about equal to attendance at age 6. In the publicly controlled schools attendance is at its peak from 9 to 13, then falls rapidly. At age 15 it is considerably below that at age 7 while total enrolment from 16 up is less than at age 7.

The ratio of male to female teachers in private schools in 1947 was about one to three whereas in the publicly controlled schools it was about one to four.

**7.—Enrolment in Private Elementary and Secondary Schools, by Provinces,  
Specified School Years Ended 1921-47**

NOTE.—Figures for intervening years will be found in the corresponding tables of the 1937, 1942 and 1946 Year Books.

<sup>1</sup> Not including Quebec.

**Business Colleges.**—Business colleges in 1938 (exclusive of Quebec) enrolled 18,576 pupils of whom 9,648 were full-time day students, 2,141 part-time day students, and 6,787 evening students. About one-third of the pupils were males. In 1947, enrolment numbered 38,800 including 18,862 full-time, 1,724 part-time, and 18,214 evening pupils. This increase is no more than should be expected considering the increase in population. In 1938, there were 441 full-time and part-time teachers and in 1947, 688 teachers. The number of male teachers increased from 133 to 226 during the period.

<sup>1</sup> Not including Quebec.

#### Subsection 4.—Universities and Colleges

The survey of higher education in Canada covers 26 years (1921-46) and records some significant changes in the growth of education at university level in Canada.

Enrolment of university-grade students, including part-time and extra-mural students, increased from 22,600 in 1921 to 92,400 in 1946, an increase from 257 students per 100,000 of population to 751. The number of students registering for post-graduate work was 407 in 1921 as compared with 3,135 in 1946. Provision for students at this level has become a major problem. Approximately 18 universities offer advanced work for the Master's degree or the equivalent French Licence but less than one-half of these accept candidates for the Doctorate. The large majority of the latter register at McGill University and the University of Toronto.

About 139,000 men and women received their first university degrees during the 1921-46 period, representing 4.5 p.c. of the young men and 1.5 p.c. of the young women who reached their early twenties in those years. In the same period, 1,741 Doctorate degrees were conferred and some 13,000 Masterships, Licences and other diplomas.

Teaching staff, until recent years, kept pace with changes in enrolment. The personnel reported at intervals since 1921 was as follows:—

Academic Year	Faculties of Arts and Science		Professional Schools		Totals (excluding duplicates)	
	Full-Time	Part-Time	Full-Time	Part-Time	Full-Time	Part-Time
1921.....	1,191	242	942	1,179	2,133	1,352
1931.....	1,776	519	1,127	1,705	2,903	2,077
1941.....	2,037	579	1,707	2,420	3,452	2,185
1946.....	2,466	1,010	2,645	2,440	4,937	2,797
1947.....	2,814	1,002	3,078	2,478	5,246	3,441

Enrolment of full-time undergraduate students for the same years was:—

<i>Academic Year</i>	<i>Arts and Science</i>	<i>Professional Schools</i>	<i>Total</i>
1921.....	9,444	12,790	22,234
1931.....	17,711	13,609	31,320
1941.....	18,824	15,669	34,493
1946.....	34,421	27,108	61,529
1947.....	41,457	34,561	76,018

**Graduates.**—Table 9 shows the number of graduates from Canadian universities and colleges in recent years.

**9.—Graduates from Canadian Universities and Colleges, School Years Ended 1939, 1946 and 1947**

NOTE.—Figures for 1920-36 are given at pp. 993-997 of the 1938 Year Book and for 1937-45 in the corresponding tables of subsequent editions.

<sup>1</sup> Includes Bachelors of Letters and of Social Science. <sup>2</sup> Includes Bachelors of Accountancy and Secretarial Science. <sup>3</sup> Includes diplomas in Architecture from the Schools of Fine Arts of Montreal and Quebec.

<sup>4</sup> Excludes teachers' diplomas. <sup>5</sup> Includes M. Com. and M. Ed. or M. Paed.

<sup>6</sup> Includes M.A. Sc., M.S.A., M.Sc.F., M. Arch., M.V. Sc., M. Sc. Dent., M. Surgery (where conferred separately).

<sup>7</sup> Except diplomas for teachers and theologians.

**Financial Status.**—Since the War the universities have undertaken extensive building programs and campaigns for increased endowments and building funds. Returns on capital expenditure for 1947 are incomplete but those reported represent an increase of more than \$2,000,000 over the preceding year. Current expenditures increased about \$8,000,000 in the same period, and endowments and trust funds increased \$10,000,000. Federal Government grants and allowances to the universities, exclusive of fees paid for veteran students which are not separable from those of other students, amounted to about \$4,000,000. Provincial grants for current expenditures represent about \$9,000,000 of a total of \$33,000,000 expended by the larger universities. The value of land, buildings and equipment reached a high point of \$112,409,000 in 1947. Table 10 presents statistics of income and capital resources of the larger universities of Canada at intervals from 1921 to 1947.

**10.—Statistics of Income and Capital Resources of Universities and Colleges, Specified School Years Ended 1921-47**

**NOTE.**—The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and the financial returns consequently do not represent a comparable record.

Year	Current Income					Deficit <sup>2</sup>	Surplus <sup>2</sup>	Values of Capital Resources

<sup>1</sup> Board and lodging not included.

<sup>2</sup> Combined deficits or surpluses of schools reporting.

**University Training Under the Veterans' Rehabilitation Act.**—Assistance to veterans in training is provided under the Veterans' Rehabilitation Act as outlined in the 1948-49 Year Book at pp. 321-322.

The number of veterans applying for training decreased rapidly during the years ended Mar. 31, 1948 and 1949. In the latter year, only 870 awards were made compared with 4,461 in 1947-48 and 23,015 in 1946-47.

During the academic year 1948-49 there were approximately 24,000 veterans in universities who were receiving assistance through the Department of Veterans Affairs compared with about 33,000 in the previous year. Of 3,300 veterans whose period of service was not sufficient to carry them through the 1948-49 year, 2,400 qualified for continued assistance by securing scholarship standing in their universities. For the year 1947-48, 89 p.c. of the student veterans passed their examinations and won a high proportion of the available scholarships.

The distribution of the 24,000 veterans enrolled in 1948-49, by academic years, was: first year 2,000; second year 5,000; third year 8,000; fourth or subsequent year 7,000; and post-graduates 2,000.

## PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

### Section 1.—The Relationship of Art to Education\*

**Fine Art.**—Fine art appears as an elective subject in the curricula of the Faculties of Arts in a number of universities, where it may be taken as one subject among five for a year or two. In some, e.g., Acadia University, N.S., there are half a dozen or more elective courses. In Mount Allison University, N.B., and in the University of Saskatchewan, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto, Ont., an Honour B.A. in Art and Archæology is offered as well as graduate work in this field. McGill University, Que., opened a Department of Fine Arts in 1947-48.

There are also schools of art not requiring any fixed academic standing for admission, which concern themselves more with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.

École des Beaux-Arts, Quebec, Que.

École des Beaux-Arts, Montreal, Que.

School of Art and Design, Museum of Fine Arts, Montreal, Que.

Ontario College of Art, Toronto, Ont.

Winnipeg School of Art, Winnipeg, Man.

Provincial Institute of Technology and Art, affiliated with the University of Alberta, Calgary, Alta. (Summer session at Banff, Alta.)

Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student, but may extend over as many as four years.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. In many cases these institu-

\* Revised under the direction of H. O. McCurry, Director, National Gallery of Canada, Ottawa.

tions supply their surrounding areas with travelling exhibitions, while the National Gallery of Canada carries on a nation-wide program of this nature (see pp. 366-367).

The principal art galleries and museums\* are:—

New Brunswick Museum, Saint John, N.B.  
 Museum of the Province of Quebec, Quebec, Que.  
 Montreal Museum of Fine Arts, Montreal, Que.  
 National Gallery of Canada, Ottawa, Ont.  
 National Museum of Canada, Ottawa, Ont.  
 London Public Library and Art Museum, London, Ont.  
 Art Gallery of Toronto, Toronto, Ont.  
 Royal Ontario Museum, Toronto, Ont.  
 Willistead Library and Art Gallery, Windsor, Ont.  
 Winnipeg Art Gallery, Winnipeg, Man.  
 Edmonton Museum of Arts, Edmonton, Alta.  
 Vancouver Art Gallery, Vancouver, B.C.

**Art Organizations.**—A development of special interest in the field of the creative arts was the establishment, in December, 1945, of the Canadian Arts Council. The Council grew out of the united action taken by its constituent associations in the spring of 1944, when they presented an integrated series of briefs to the Special Committee of the House of Commons on Reconstruction and Re-establishment. These briefs looked forward to a post-war society in which the arts would be "more widely distributed and more closely integrated with the life of our people". The Council has accordingly taken a very active interest in the development of the Community Centre idea.

The basic situation claimed by the Council is that "in Canada there are millions who have never seen an original work of art, nor attended a symphony concert or a professionally produced play, while in our largest cities thousands of professional creative artists enjoy a field so limited that they are forced into activities unsuited to their talents". Chief among the proposals for remedying the situation is the establishment of "a government body to promote a national cultural program and provide music, drama, art, and film services for all our people". Other proposals have in view the improvement of industrial design, and housing and town planning.

To list the names of the 16 bodies constituting the Council is to give some indication of the range of professional organization in the field of the arts in Canada:—

The Royal Canadian Academy of Arts  
 The Royal Architectural Institute of Canada  
 The Sculptors' Society of Canada  
 The Canadian Society of Painters in Water Colour  
 The Canadian Society of Painter-Etchers and Engravers  
 The Canadian Group of Painters  
 The Canadian Society of Graphic Arts  
 The Federation of Canadian Artists  
 The Canadian Authors' Association  
 La Société des Écrivains Canadiens  
 The Music Committee  
 The Canadian Society of Landscape Architects and Townplanners  
 The Dominion Drama Festival  
 The Canadian Handicrafts Guild  
 The Canadian Guild of Potters  
 The Arts and Letters Club.

\* A complete list of Canadian art museums, societies and schools is included in the *American Art Annual* (New York, 1948).

**The Role of the National Gallery of Canada.** --Founded in 1880 by the Marquis of Lorne, the National Gallery at first served mainly as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and incorporated under a Board of Trustees in 1913, it has assembled its permanent collection largely during the latest 40 years. This collection of pictures and sculpture, prints and drawings, representing the styles of past and present of various parts of the world was assembled for public enjoyment, study and the improvement of arts and industrial products and as the necessary basis for any program of art education. The collection of the National Gallery to-day is of international repute and is accessible to the whole country by means of catalogues, photographs and colour reproductions and to a limited extent by loans. The Canadian Section, naturally the most inclusive, is the best available source for the study of Canadian art.

In 1946, the Massey Collection of 75 English paintings was presented by the Rt. Hon. Vincent Massey, C.H., and Mrs. Massey as trustees of the Massey Foundation. In 1948 the donors made a further gift. Now comprising 86 pictures, the Massey Collection makes the National Gallery a leading centre for the study of British art, and is the largest gift in the Gallery's history. Among other recent acquisitions and gifts are paintings by Quentin Massys, Murillo, and Richard Wilson. Additions to the Canadian Section include a group of important works from the early primitives to the present day. A new catalogue of the paintings in the National Gallery was published in 1948. The Department of Prints and Drawings made in 1948 what is probably the most important acquisition in its history: the Artaria collection of the "Iconography" of Van Dyck, including many extremely rare etchings and engravings. Drawings by Claude le Lorrain, Lorenzo Costa, Rowlandson, Cotman and others, have also been added by this Department.

Exhibitions of the art of other countries organized at the National Gallery during 1948 and 1949 include the following: *Masterpieces of Dutch Painting*, composed of pictures looted by the enemy during the War and lent by the Netherlands Government in recognition of the part played by Canadian and United States forces in their recovery; *British Drawings*; *Helene Schjerfbeck* (Finland); *The Hickman Bacon Collection of English Water Colours*; *South African Art*; *Paul Nash* (Great Britain). Special Canadian exhibitions included the *Prudence Heward* and *Peggy Nicol MacLeod* memorial exhibitions and a retrospective showing of *Lawren Harris*. The more important of the exhibitions sent abroad by the National Gallery during the year include the following: *Canadian Painters*, Virginia Museum, Richmond, U.S.A., February-March, 1949; *Forty Years of Canadian Painting*, Museum of Fine Arts, Boston, U.S.A., July-September, 1949; *The Massey Collection of English Painting*, Australia and New Zealand galleries, 1949-50.

The National Gallery carries out a program of extension work throughout Canada. Travelling exhibitions of the art of Canada and other countries are shipped through the country under the Gallery's auspices. About 25 such exhibitions, including those of the several chartered art societies, are circulated and other responsible organizations in various regions draw annually upon the services of the Gallery as the source of a great part of their offerings to the public. In this way actual works of art are constantly being brought to the attention of the Canadian people.

As the latest development in its general educational work the National Gallery established in 1948 a Design Index as the result of the public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs. A number of exhibitions on Canadian industrial art have been held in various parts of the country.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. Thus the Gallery provides material such as written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children at the Gallery, exhibitions of children's work, conducted tours of the Gallery's collections and educational demonstrations, public lectures at Ottawa, and lecture tours throughout Canada.

The National Gallery also lends art films, including the colour and sound film *Canadian Landscape*, made in conjunction with the National Film Board and featuring the work of modern Canadian artists against a historical background of landscape painting in Canada since Krieghoff. The silk screen prints by Canadian artists, already famous in many parts of the world as the result of their distribution during the War, are available to schools and the public generally. These and other reproductions are listed in the Gallery's publication, *Reproductions, Publications, and Educational Material*. The magazine *Canadian Art*, in the publication of which the National Gallery takes a leading part, has doubled its circulation since 1945.

**Museums and Art Galleries.**—At pp. 1025-1026 of the 1939 Year Book a list of the museums (including art galleries) in Canada employing full-time staff is published, showing floor space and average daily attendance of each. There has been no official detailed report published by the Dominion Bureau of Statistics on this subject since 1938.

In 1947, the Canadian Museums Association was formed with the object of aiding in the improvement of the services of museums as educational institutions by promoting co-operation between them, by exchanges with other countries, and by the training and securing of expert staffs.

## Section 2.—The Educational and Cultural Functions of the National Film Board\*

Canada has seen a great advance in the use of films in education, both formal and informal, for adults as well as children. The National Film Board has contributed very largely to this development. It has produced and distributed more than 1,200 informational films, made available to Canadian schools and adult organizations some of the better films produced in other countries, assisted in the establishing and servicing of about 235 film libraries and depots, provided film programs regularly to several thousand rural communities, and assisted in making educational films available to hundreds of thousands of Canadian school children. In all these activities the Board has worked closely with provincial Departments of Education, national and provincial organizations engaged in educational work, and community organizations of all kinds. The object has been to assist all educational agencies to obtain and use visual material to strengthen their educational programs, as well as to bring to the largest possible section of the Canadian public those films that interpret Canadian and world affairs.

**Film Libraries.**—In Canada, the backbone of urban 16mm film distribution is the film libraries that have been established throughout all provinces by the Board and by local bodies such as public libraries, normal schools, provincial Departments of Education, university extension departments and, more recently, community

\* Prepared under the direction of Ross McLean, Film Commissioner, National Film Board, by Stanley Rands, Co-ordinator, Research and Reports. The non-educational services of the National Film Board are outlined in Chapter XXX on Sources of Official Statistical and Other Information Relative to Canada.

film councils. The majority of Canadian communities with populations of more than 5,000 now have their own film libraries which numbered 235 by the end of 1948. Nearly 250 Film Councils and local film committees assist in encouraging the use of informative and educational films in the community.

**Special Educational Services.**—Special services have been developed for industry, women's organizations, scientific and engineering groups, health and medical bodies, and in other specialized fields such as education, science, welfare, reconstruction and housing to assist in building suitable programs of films and other materials for all interested organizations. To serve their film needs, the Board maintains at Ottawa a Preview Library of 2,600 titles.

**Rural Film Circuits.**—Rural areas that lack projectors and film libraries are served with monthly film programs by the Board's rural circuits. An increasing number of circuits are operated in co-operation with farm organizations and provincial and local governments. The careful planning of the rural film programs, together with discussion booklets for teachers and group leaders, relate them closely to the work and interests of the communities they serve. Each rural circuit reaches about 20 locations each month bringing a program in the afternoon to school children and in the evening to general audiences. Films are chosen for the value and interest of the information they contain. The program for schools is chosen in consultation with the Department of Education in each province. Many thousands of Canadian school children have had their first opportunity to see educational films regularly through the Film Board's rural circuits. Through their co-operation with farm organizations, extension departments of universities, and provincial Departments of Education, Health, and Agriculture, the Board's rural representatives have come to be regarded as valued servants of the community.

### Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation\*

The Canadian Broadcasting Corporation devotes a considerable portion of its broadcast time on the English- and French-language networks to programs of an educational nature directed to both children and adults. When possible, education and entertainment are combined.

**Pre-School Broadcasts.**—All over the country, and particularly in rural areas, there are children of pre-school age who cannot enjoy the advantages of nursery school or kindergarten training. For them, the CBC provides one of its most successful educational programs, *Kindergarten of the Air*, fifteen minutes each weekday. This program is carefully planned with the advice of kindergarten experts and representatives of the Federation of Home and School, Women's Institutes and the Junior League; it gives the children instruction in the learning of songs, listening to stories, participation in play exercises, and the development of other activities suitable to their age level.

**School Broadcasts.**—The CBC co-operates with the provincial Departments of Education in Canada in providing special programs related to the courses of study which are heard in the classrooms as a regular portion of the school work.

\* Revised under the direction of Dr. Augustin Frigon, C.M.G., General Manager, Canadian Broadcasting Corporation, Ottawa. The non-educational services of the CBC are outlined in Part VII, Sect. 3, Chapter XX on Transportation and Communications.

At the request of the Department of Mines and Resources it also provides recordings of school programs which are broadcast by the Canadian Army radio station at Aklavik to schools in the Northwest Territories and Yukon.

In addition to the provincial broadcasts, the CBC itself prepares and finances a series of *National School Broadcasts* heard in classrooms from coast to coast. They are prepared with the advice of the National Advisory Council on National School Broadcasting, consisting of representatives of each of the provincial Departments of Education, the Canadian Teachers' Federation, the Canadian Federation of Home and School, the Conference of Canadian Universities, and the Canadian Trustees' Association. The National School Broadcast program aims to develop a healthy sense of citizenship in students by giving them information about their cultural heritage, and Canada's achievements and responsibilities in the world, as well as its development as a nation.

During the 1948-49 season, twenty-six *National School Broadcasts* presented a series of Canadian books in dramatic form and a group of Indian legends, dramatized stories of famous Canadian citizens, actuality broadcasts about the national importance of the postal services, the railways, Trans-Canada Airways and the Royal Canadian Mounted Police, two symphony concerts and a complete radio version of Shakespeare's *Julius Caesar*. A new development in the *National School Broadcast* program was the inclusion, as an experiment, of three exchange broadcasts with the Commonwealth countries of England, Australia and South Africa. This highly successful program resulted in a conference with the educational representatives of the British Broadcasting Corporation and the Australian Broadcasting Commission for the planning of a more extensive system of exchange broadcasts among Commonwealth nations.

During the season also a number of transcribed British school broadcasts were introduced which, at the request of educational authorities, were presented as a supplementary educational program in various provinces.

Particulars of all school broadcasts in Canada are contained in the manual *Young Canada Listens* published each year by the CBC and circulated among teachers and educational authorities.

**Adult Education.**—Programs of an adult educational nature are presented on all CBC networks in a variety of forms and on a wide range of subjects including national and international affairs, political broadcasts, business and labour interests, women's interests, community activities and social problems, literature and creative writing, science, nature and sports. *Citizens' Forum*, a discussion program on public affairs, is now in its sixth year. Broadcasts usually originate from public meetings. The series is produced in co-operation with the Canadian Association for Adult Education which has organized about five hundred listening groups across the country. This Association, with the Canadian Federation of Agriculture, helps in the preparation of another CBC series, *National Farm Radio Forum*, on which farmers from all parts of Canada are able to exchange views and discuss their problems. Now in its ninth year, *Farm Radio Forum* is followed by more than 1,500 listening groups throughout rural Canada. Both these discussion programs have their counterparts on the CBC French network.

Two significant programs which have been inaugurated more recently are *Cross Section*, which deals in documentary style with economic and social issues and questions of special concern to business and labour, and *In Search of Ourselves*,

a series on human relations prepared in co-operation with the National Committee on Mental Hygiene. This program is used in discussion by several hundred listening groups organized by Home and School Associations.

In the autumn of 1948 a special series *In Search of Citizens* was arranged in co-operation with interested Federal and Provincial Government Departments to acquaint Canadians with some of the problems of newly arrived immigrants. Regular commentaries on national and international affairs are heard in *Capital Report*, *Weekend Review* and *United Nations Commentary*.

In order to present commentaries on the European scene, the CBC maintains an overseas bureau with headquarters at London, England. It also has an office and a resident correspondent at the United Nations headquarters, Lake Success, N.Y.

Special programs for women in both English and French offer practical information on household problems, citizenship, community organization, child psychology, and on national and international questions that have special appeal for women.

**Music and Drama.**—During the 1948-49 season the CBC formed two opera companies for the performance of light operas and four grand operas—*La Bohème*, *Orpheus*, *La Traviata*, and *Don Giovanni*—on the special *Wednesday Night* program. Other high-lights of the season were the broadcasting, in their entirety, of Bach's *St. Matthew Passion* and Handel's *Messiah*, and two programs of two and a half hours each, heard on successive Wednesday nights, entitled *A Layman's History of Music*. These programs traced the development of music from the origin of melody and rhythm to the music of the present day. Regularly scheduled symphonic concerts continued to be heard, and music appreciation was fostered by special music programs for children. Many young Canadian musicians were heard in recital periods.

Significant drama productions during the year included the two and a half hour feature *A Day in the Life of Samuel Johnson*, and productions of Ibsen's *Ghosts*, and *Hedda Gabler*; Sean O'Casey's *Juno and the Paycock*; Tolstoy's *The Power of Darkness*; Shakespeare's *Julius Caesar*, *Twelfth Night*, *Hamlet*, and *King Richard II*; Ansky's *The Dybbuk*; and many original radio plays. About 90 p.c. of CBC drama productions, both original plays and adaptations, are by Canadian writers.

#### Section 4.—Royal Commission on National Development in the Arts, Letters and Sciences

There has been an increasing awareness in recent years that the Canadian people should be given the opportunity to learn as much as possible about their country, its history and traditions, art, literature and culture, their national life and common achievements, and that it is in the national interest to give encouragement to institutions which, though not strictly educational, express national feeling, promote common understanding and add to the variety and richness of Canadian life.

The desire of the Government to meet this development has resulted in the appointment of a Royal Commission on National Development in the Arts, Letters and Science, with wide terms of reference, to explore this situation.

P.C. 1786 of Apr. 8, 1949, established a Royal Commission to examine and make recommendations upon:—

- (1) The principles upon which the policy of Canada should be based in the fields of radio and television broadcasting.
- (2) Such agencies and activities of the Government of Canada as the National Film Board, the National Gallery, the National Museum, the Public Archives and the care and custody of public records, the Library of Parliament; methods by which research is aided including grants for scholarships through various Federal Government agencies; the eventual character and scope of the National Library; the scope or activities of these agencies, the manner in which they should be conducted, financed and controlled, and other matters relevant thereto.
- (3) Methods by which the relations of Canada with the United Nations Educational, Scientific and Cultural Organization and with other organizations operating in this field should be conducted.
- (4) Relations of the Government of Canada and any of its agencies with various national voluntary bodies operating in the field with which this inquiry will be concerned.

Public hearings were held at Ottawa from Aug. 3 to Sept. 8, 1949, and briefs were heard relating to all matters included in the terms of reference from about thirty national organizations or representatives of government agencies.

From Oct. 11 to Nov. 5, 1949, the Commission's schedule called for hearings in Western Canada. The remainder of November was reserved for hearings at Toronto and Montreal; and from Jan. 10 to Jan. 29, 1950, sessions were arranged for Quebec City and the Maritime Provinces.

### Section 5.—Public Libraries

The statistical survey of the public libraries of Canada for 1946-48 shows record expenditures for public library service for 1947 amounting to \$3,931,000, as compared with \$2,890,000 for 1945 and \$2,041,000 for 1937. Expenditures for reading material advanced from \$584,000 in 1945 to \$812,000 in 1947 and the number of volumes available for circulation increased 475,000 to a peak of 6,431,000. Provincial grants increased 56 p.c. compared with 1945 largely due to legislation in Ontario which provided for grants based on salaries paid and book stock.

Book circulation dropped almost to the level of 1937, a feature common to the library service of other countries at the time, but also due in part to the fact that the library services of Nova Scotia, Manitoba, Saskatchewan and Alberta were undergoing considerable re-organization which delayed the normal progression of circulation statistics for Canada.

To counteract the decrease in recorded loans of reading material, the libraries reported progress in their auxiliary services such as the loans of films, musical records, and art reproductions. As a comparatively new public library service, almost 100 of the 680 public libraries reported films, on deposit or owned, available for loan to the public. Returns from 40 libraries reported 4,000 films available for loans (2,996 on deposit), 22,682 showings, and a total audience of 2,199,342 people.

There was an increase in the number of regional libraries and in specialized services for children. In Ontario, 12 county library co-operatives and 6 township libraries were organized, one additional in each group since 1945; Nova Scotia organized the Annapolis Valley library and was working on other groups as were the three Prairie Provinces, Manitoba, Saskatchewan and Alberta. Services for children and teen-agers in the cities recorded a circulation of 36 books per reader for

1947. There were eight special libraries for children only—one at Halifax and seven at Montreal—and 49 special departments for children and juveniles within large public libraries. The services included film showings, art classes, music appreciation classes, puppet shows and drama.

### 11.—Public Libraries, Exclusive of Regional Libraries, by Provinces, 1947

## Section 6.—Canada and the United Nations Educational, Scientific and Cultural Organization

The origin of the United Nations Educational, Scientific and Cultural Organization and its activities up to the First Session of the General Conference (held at Paris in November, 1946) are outlined at pp. 313-315 of the 1947 Year Book. The Second Session of the General Conference was held at Mexico City, Nov. 6 to Dec. 4, 1947, and the program adopted was described briefly at pp. 338-339 of the 1948-49 Year Book.

The Third Session of the General Conference was held at Beirut, Lebanon, Nov. 17 to Dec. 11, 1948. A report of the Canadian delegation (49 pp. mimeographed) is available from the Department of External Affairs.

## PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH

### Section 1.—The National Research Council\*

Organized research on a national basis in Canada dates from 1916 when, at the suggestion of the Government of Great Britain, the Canadian Government established the "Honorary Advisory Council for Scientific and Industrial Research" under a Committee of the Privy Council. Provision was thereby made for the planning and integration of research work and the organization of co-operative investigations; the post-graduate training of research workers; and the prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

The Council early recommended the establishment of national laboratories and a Special Committee of Parliament, appointed to study this recommendation, endorsed the proposal after having heard the opinions of many experts. Financial difficulties intervened, but in 1924 public opinion made it possible to have the Research Council Act passed by Parliament. Temporary laboratories were secured and research on the utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during the First World War, was re-established on a large scale, and has become a producer of materials that have found world-wide markets. As a result, in 1929-30, the Government provided funds for new laboratories.

The National Research Building on Sussex Street, Ottawa, was opened in 1932 and in 1939 construction of the aerodynamics building on a 130-acre site adjacent to the Ottawa Air Station was started. Later several other buildings were erected on this site, including separate laboratories for research on engines, gas and oil, hydraulics, explosives and structures, and wood-working and metal-working shops. Since then these facilities have been enlarged and extended and new buildings have been provided for engineering and for low-temperature studies.

A Prairie Regional Laboratory, constructed on the campus of the University of Saskatchewan, was opened in June, 1948. A Maritime Regional Laboratory is soon to be built on Dalhousie University campus at Halifax, N.S.

Administration of the Atomic Energy Project at Chalk River, Ont., was taken over by the National Research Council on Feb. 1, 1947, and operations are being continued in accordance with broad general policies fixed from time to time by the Atomic Energy Control Board.

Laboratories now in operation under the National Research Council include Research, Health and Engineering Divisions of the Atomic Energy Project at Chalk River; and at Ottawa, Applied Biology, Building Research, Pure and Applied Chemistry, Mechanical Engineering (aeronautics and hydraulics), Physics, and Radio and Electrical Engineering. Medical research is carried on by means of grants to accredited workers in the various medical schools and university hospitals. A Division of Information Services has a field staff of technical officers whose job is to assist the smaller industries across Canada in bringing their operating problems to the attention of the Council. With the extensive library facilities available to the Council, it is usually possible to provide the required information in a very short time.

\* Revised under the direction of C. J. Mackenzie, C.M.G., F.R.S., President, National Research Council, Ottawa.

In addition to its Technical Information Service, the National Research Council is of service to industry in two other main ways. First, it encourages scientists from industry to visit the laboratories of the Council and in turn sends its men to visit industrial laboratories. A free and constant flow of personnel and information is thus maintained between the Council and most industries that have laboratories. The aim is to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as sources of scientific information and assistance.

Secondly, the Council undertakes, under contract, research work for any firm which has a problem that cannot be solved by private consulting and testing laboratories, and also obtains assistance, in return, from many companies. The Council has long-standing and intimate contacts of this co-operative kind with many Canadian industries in different fields—refractories, oils, metals, chemicals and transport, to mention only a few examples.

Promotion of research training of scientific workers has been carried on by the National Research Council since its inception along three lines: (1) scholarships awarded annually to carefully selected university students who show an aptitude for research; (2) assisted research grants to heads of science departments in the universities for the employment of junior assistants and the purchase of special equipment for research purposes; (3) award of post-graduate and post-doctorate fellowships in the natural sciences and in medicine.

**Principal Activities, 1948-49.**—With a staff of more than 2,600 persons, many of whom have won wide recognition in their respective fields, the Council now occupies a very creditable place in the scientific world. In 1948, for the first time, the Council awarded 19 post-doctorate fellowships each tenable for one year in the Division of Chemistry. Holders of these fellowships include men trained in English and Scottish universities and institutions in Holland and Denmark. Heretofore, the trend in post-graduate research has always been from Canada to other countries, mostly the United States and Europe. It is a mark of progress that the flow of scientists is now moving in both directions.

At the Atomic Energy Project, the experimental NRX pile has been producing successfully the highest neutron flux density of any research pile in existence, and has afforded opportunities for carrying out investigations of a fundamental nature as well as permitting irradiation of nearly 600 different samples for the production of radioactive isotopes. The Isotopes Branch has distributed 34 different isotopes to 21 institutions for experimental work in pure and applied science. To stimulate the use of the products of the Chalk River pile, a conference on Industrial Uses of Radioactive Isotopes was held at Ottawa in December, 1948, which was attended by more than 100 representatives from Canadian industries.

In the Division of Applied Biology, many problems of industrial interest are being investigated, particularly the preservation of foodstuffs and the industrial utilization of wastes and surpluses. During 1948, more work of a fundamental nature was initiated to establish a reasonable balance between the various applied and fundamental research activities.

Construction of the Prairie Regional Laboratory at Saskatoon, Sask., was completed in 1948; five laboratories were equipped and partially staffed. Two crop-utilization projects, oil seeds and agricultural residues, are in progress and work is soon to be undertaken on proteins and carbohydrates. In the field of industrial

fermentations three laboratories are operating; bacteriology, mycology, and fermentation chemistry. One additional unit, assigned to the more specialized field of antibiotics and enzyme chemistry, is in prospect. Pilot-plant equipment for the evaluation of industrial fermentation processes has been designed and ordered and plans prepared for cold rooms, necessary in enzyme and microbiological studies.

The Division of Building Research, which started its work during 1948, was instituted by the Council in order to provide a research service to the construction industry of Canada. Attention has been concentrated on house construction. The Division is designing a special facility to be installed in the Prairie Regional Laboratory whereby complete wall sections (measuring up to 7 ft. by 8 ft.) can be tested under completely controlled conditions of temperature and humidity. A Building Code Conference, held Feb. 28 and Mar. 1, 1949, under the auspices of the Associate Committee on the National Building Code, was highly successful in bringing together inspectors, municipal officials, and other representatives of organizations concerned with the preparation, administration, or general use of municipal building codes.

A soil mechanics laboratory has been set up and work on snow and ice is proceeding in co-operation with other organizations interested in this field.

In the Pure Chemistry Branch, a variety of photochemical and other kinetic investigations have been made on ether, acetone, acetaldehyde, ethylene oxide and a number of hydrocarbons. Radioactive carbon is being used to label particular functional groups as desired in order to follow their course in some photochemical reactions. Measurements have been made of the adsorption of some simple gases on potassium chloride over a range of temperatures. In the section on thermodynamic properties of gases, the compressibility of pure helium has been measured with a high degree of accuracy in the temperature range 0°C. to 600°C. The mass spectrometer has been put into operation and is now being calibrated. Investigation of plants has been continued in search of new alkaloids and a few new natural bases have been discovered. Work has been continued on the study of the infra-red adsorption spectra of complex organic compounds, particularly of compounds of biological importance. The fibre section has continued the investigation of the acid dyeing of wool. A study of the various factors affecting the air permeability of fabrics has been initiated.

One of the functions of the Applied Chemistry Branch of the Division of Chemistry is to act in an advisory capacity to government departments in questions relating to the supply or the testing of chemicals. In addition the Branch has continued to carry on research on a number of projects in the fields of chemical engineering, textiles, corrosion, rubber, protective coatings, applied physical chemistry, industrial organic chemistry, and organic synthesis. These projects are directed mainly towards the application of new scientific knowledge in the chemical industrial field.

The Technical Information Service, which was set up to aid the development of manufacturing efficiency by answering technical questions for industry, deals with about 400 inquiries a month. Although most of the answers to these inquiries are prepared by the Council's staff, valuable assistance is provided by experts in several other organizations, especially the Forest Products Laboratories and the Bureau of Mines.

The research program of the Division of Medical Research is entirely extra-mural. Research problems are supported by grants-in-aid, and training is provided by the appointment of Research Fellows. Most of the work under the Division is done in Canadian Medical Schools. The Research Fellowship program of the Division, established in 1946, has filled an obvious need in the provision of research training for medical graduates.

The scope of the Division of Mechanical Engineering includes aeronautics and hydrodynamics as well as phases of mechanical engineering. The aeronautical laboratories provide the Canadian aviation industry, both constructors and operators, with research, development and testing facilities, and the laboratories also function as the research organization of the Royal Canadian Air Force. Provision is made for work in almost all fields of aeronautics, including aerodynamics, gas dynamics, power plants, structures, and fuels and lubricants.

The cold chambers of the recently opened low-temperature laboratory have been in almost continuous use on projects for the Department of National Defence and industry. Construction of the refrigerated wind-tunnel is nearing completion. In the hydraulics laboratory further work was done on the model of the Fraser River for the Department of Public Works. Arrangements have been made with the University of British Columbia for the construction of a larger model at the University and further tests. Other model work has included studies of spillways, log chutes and log diversion relative to power plants.

Work in the physics laboratories is both fundamental and applied in character. Pure science is represented by studies in spectroscopy, carried on by a group of specialists in this field. Cosmic rays, precision electrical standards and radio-activity also present problems in pure physics.

On the practical side several investigations are in progress. Studies on the thermostatic control of refrigerator cars have been continued. Research is proceeding on the thermal conductivity of metals at high temperatures. Progress has been made in studies on migration of moisture through wood; apparatus for measuring thermal conductivity of textiles in still air and in wind has been further developed; and the project on panel heating of houses has been continued.

A substantial volume of work passes through the metrology laboratory. This unit is responsible for the custody and periodical checking of Canada's national standards of measurement.

Aid has been given in the modification of equipment used for geophysical prospecting. Practical results have been obtained in colorimetry tests on railway fuseses, and a great amount of work has been done in assessing the performance of aerial camera lenses. A motion picture camera capable of taking photographs at 200,000 frames per second has been built. Numerous types of precision instruments are being designed and built for use in laboratory studies both in physics and in other fields of science.

The Radio and Electrical Engineering Division carries on fundamental research in radar, radiophysics and applications of radar techniques to peacetime problems, and does a great deal of work for the Armed Services. Electrical equipment needed by other laboratory divisions is also designed and built as required. The Division is co-operating with the Meteorological Service and other government departments. Mention may be made of the use of radar in studying meteors. Electromagnetic

radiation from the sun on microwave and metre wavelengths is also being studied. Marine radar equipment has been developed and many sets are now in use as aids to navigation.

## Section 2. — Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council, which is the central national organization for research, research is carried on by the Departments of Agriculture, Mines and Resources, Fisheries, the Board of Grain Commissioners and the Dominion Observatories. These bodies have trained permanent scientific staffs for investigation and research in their own fields such as soil problems, crops, breeding and testing of animals, processing and marketing, extractive and physical metallurgy, silvicultural and forest products, hydrography, ocean and mollusk fisheries, etc. The research and experimentation carried on by the Science Service is outlined in the Agriculture Chapter at pp. 406-409. The work of the Experimental Farms System is described at pp. 349-352 of the 1948-49 edition of the Year Book. Specialized work in scientific forest research is described in the Forestry Chapter at pp. 468-469.

The Board of Grain Commissioners employs a staff of seven chemists and 21 assistants in the main research laboratories for milling, baking, malting, etc., while the Dominion Observatories carry out research in the fields of solar physics, astrophysics, seismology, terrestrial magnetism, gravity and other studies.

Universities often show bold initiative in exploring the field of scientific research but with the limited facilities at their disposal the task of carrying their discoveries to a conclusion is not always easy. Government and industrial laboratories are often able to pick up and carry on where the universities leave off.

A number of research foundations have their own special fields of research. The Ontario Research Foundation at Toronto, Ont., established in 1928, is an independent non-profit-seeking scientific organization available to the public and to industry for assistance in matters of a technological character.

The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada.

The Rockefeller Foundation assists various agencies in Canada in the furtherance of scientific research in medical science, natural science, social science and public health.

A detailed account of scientific and industrial research in Canada is given at pp. 979-1012 of the 1940 Year Book. This has been revised to cover developments to 1947 and is available in reprint form from the Dominion Statistician.

# CHAPTER X.—NATIONAL ACCOUNTS AND RELATED ECONOMIC STATISTICS

## CONSPECTUS

SECTION 2. CANADA'S INTERNATIONAL INVESTMENT POSITION.....	390		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

## PART I.—NATIONAL ACCOUNTS\*

The national accounts which summarize the nation's economic transactions make possible the study of interrelationships in the economic system as a whole. They are particularly important to governments concerned with problems of full employment, taxation and prices and to business men concerned with programs of investment and marketing.

The national accounts provide a summary of production and consumption in terms of prices established in the market. The value of the nation's production may change either because of price changes or because of changes in the volume of output. When the resources of the economy are fully employed the volume of goods and services produced can usually increase but slowly from one year to the next since the increase is then dependent on the annual increment to resources of labour and capital or their more efficient utilization. Consequently a rapid rise in the value of output under these conditions is explained mainly by price increases. When there are unemployed resources in the country, a substantial increase in the value of production of goods and services may occur from one year to the next as these resources are brought into use, even though prices remain stable. Since the following tables are expressed in current dollars, year to year changes must be considered in relation to price changes over the period.

The tables presented here cover only part of the complete national accounts analysis. Tables 1 and 2 give the main aggregates of national income, gross national product and expenditure and their components. Tables are also included showing personal income and disposition of personal income; government revenue and expenditure; and source and disposition of private saving. Further information can be obtained by reference to National Accounts bulletins published by the Dominion Bureau of Statistics.†

*National Income.*—Net national income at factor cost or, more briefly, national income, measures the value of goods and services produced by the labour and capital of Canadian residents in a year, after provision has been made for depreciation of capital assets employed in production, and exclusive of indirect taxes less subsidies. For the economy as a whole this total equals the earnings of residents of Canada from the production of goods and services, that is, the sum of salaries and wages, profits, interest, net rent, and net income of agriculture and other unincorporated business.

\* Prepared by the Research and Development staff, Dominion Bureau of Statistics.

† Reference may be made to *National Accounts, Income and Expenditure 1941-1948* (revised September, 1949), and previous editions of the same publication for 1938-45, 1926-47 and 1939-47 for concepts, methods and sources as well as more complete detail.

*Gross National Product.*—Gross national product measures the value of goods and services produced, at the prices at which they are purchased in the market. Accordingly, to obtain the gross national product it is necessary to add to the national income provisions for depreciation and indirect taxes less subsidies.

*Gross National Expenditure.*—Gross national expenditure measures the same aggregate as gross national product, namely, the total production of goods and services at market prices. However, gross national product is measured in terms of costs, whereas gross national expenditure is obtained by adding together all sales and adjusting them for imports and changes in inventories. Four broad types of sales can be distinguished: sales to persons, to governments, to business for capital account (gross investment at home including changes in inventories), and to foreigners, (exports). The total of these sales includes imports of goods and services. Since the purpose is to measure only production of labour and capital of residents residents of Canada, imports of goods and services are deducted.

*Personal Income.*—Personal income is the sum of current receipts of income whether or not these receipts are earnings from production. Thus, it includes salaries and wages, net income of unincorporated enterprise, interest, dividends and net rentals of persons and transfer payments from governments, such as family allowances, unemployment insurance benefits and war service gratuities.

*Recent Developments.*—National income was 15 p.c. higher in 1948 than in 1947. Most of the increase was, undoubtedly, the result of higher prices since retail prices (as measured by the cost-of-living index) rose by 14 p.c. in the same period. Some changes in the proportion of different factor shares in the total national income are indicated. A greater share of the national income went to farmers, net income of agriculture increasing to 13.2 p.c. of the national income compared with 11.1 p.c. in 1947 and 10.7 p.c. in 1939. Other components, salaries and wages, investment income, and net income of non-agricultural unincorporated business were all slightly smaller in relation to the total, although larger in absolute terms. Corporation profits which are a large part of investment income did not share in the relative decline but were 16.7 p.c. of the total in both years.

Gross national expenditure indicates the manner in which the total production of goods and services is utilized. The shares of the production of goods and services absorbed by the main components: consumer expenditure, government expenditure, gross home investment and net foreign investment, were comparatively stable as between 1947 and 1948. Consumer expenditure and gross home investment show minor declines from 67.1 p.c. and 21.6 p.c. of gross national expenditure respectively in 1947 to 65.3 p.c. and 20.9 p.c. in 1948. The slight decline in gross home investment as a percentage of gross national expenditure between 1947 and 1948 was due entirely to a marked decline in the rate of inventory accumulation. Expenditure on housing and plant and equipment both showed substantial absolute and relative gains. Government expenditure on goods and services increased in 1948 to 26.2 p.c. of gross national expenditure compared with 26.1 p.c. in 1947. Net foreign investment increased from 0.1 p.c. in 1947 to 2.7 p.c. in 1948. Exports increased in absolute terms and absorbed the same proportion of gross national expenditure in 1948 as in 1947. Imports on the other hand, although approximately stable in absolute terms, declined relative to the total. This was largely the result of emergency restrictions on imports introduced in the fall of 1947 to correct the Canadian shortage of United States dollars.

Personal income rose by \$1,538,000,000 between 1947 and 1948. The rise of \$450,000,000 in the net income of farmers from \$1,210,000,000 in 1947 to \$1,660,000,000 in 1948 was particularly striking. Government transfer payments declined slightly the drop in veterans' payments being partly offset by increased pensions, family allowances, hospital grants and unemployment benefits. The increase of \$957,000,000 in personal expenditure on consumer goods and services between 1947 and 1948 was considerably less than the increase in personal income. Direct taxes were a smaller percentage of personal income in 1948 than in 1947 but increased by \$22,000,000 in absolute terms. Personal saving which had been declining steadily in post-war years increased sharply from 4.1 p.c. of personal income in 1947 to 8.3 p.c. of personal income in 1948.

The tables of government revenue and expenditure are designed to include only those transactions which have relevance for the national accounts, and consequently the surpluses or deficits shown here do not agree with those shown in the various public accounts. It has been necessary to adjust the conventional accounting statements of fiscal year revenue and expenditure to exclude purely bookkeeping transactions as well as the purchase and sale of existing capital assets. Extra-budgetary funds such as unemployment insurance, workmen's compensation and pension funds have been added, and surpluses or deficits of government enterprises are likewise included. In the federal accounts some of the more substantial adjustments are as follows: national defence recoverable expenditure is added, war refunds are allocated to prior years, corporate taxes are adjusted to an accrual basis, sales of war assets to business are eliminated, and the British Commonwealth Air Training Plan write-off is eliminated from expenditure. In addition, the federal figures have been adjusted to a calendar year basis by using the monthly figures published by the Comptroller of the Treasury. Government loans to foreign countries and accumulation of gold or foreign exchange are not included with government expenditure.

For purpose of analysis, expenditure by government may be divided into two main categories: expenditure for the purchase of goods and services; and transfer payments, such as family allowances, old age pensions, veterans benefits, and the greater part of interest on the public debt, none of which arises from the current production of goods and services. The first category represents the demands which governments place on the annual output of the nation. Transfer payments, on the other hand, may be considered essentially as transfer of income from one part of the community to another and simply add to the sums available for spending or saving by the recipient.

During 1948 government expenditure on goods and services increased to \$1,768,000,000 from the post-war low of \$1,551,000,000 in 1947. Transfer payments to persons declined by only 0.6 p.c.; subsidies fell off sharply by 58.8 p.c. following abandonment of subsidy programs associated with control of the domestic price level. Using definitions appropriate to the national accounts the surplus of revenue over expenditure was a record \$818,000,000 in 1948, most of this surplus being attributable to the Federal Government.

During 1948 gross home investment increased by \$286,000,000 or 9.7 p.c. Large increases of \$158,000,000 in housing and \$361,000,000 in plant and equipment were partially offset by a \$233,000,000 decline in the rate of inventory accumulation. Net foreign investment, the excess of exports over imports, rose sharply from \$17,000,000 in 1947 to \$419,000,000 in 1948. In both 1947 and 1948 the large government surpluses helped to bridge the gap between private saving and record levels of investment.

## PART II.—RELATED ECONOMIC STATISTICS

## Section 1.—Survey of Production\*

This Section deals with gross and net values of commodity production. Net production, in general, represents an estimate of the amount contributed to the national economy by the leading industrial groups engaged in commodity production. It is made up of the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in production.† For purposes of economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication included in the latter.

**Current Trends.**—The value of commodity production in Canada in 1947 was the highest ever attained in the history of the country. The gross value at \$15,074,000,000 was 23.4 p.c. higher than in the preceding year, when it stood at \$12,213,000,000 and 184 p.c. higher than in 1938. The increase in the value of production was practically continuous from 1938 to the year under review, the recession in 1945 having been the only interruption.

Since for most purposes the net value of production is more significant than the gross, the subsequent analysis is based mainly on that phase of the subject. Net production was valued at a record \$7,765,000,000 in 1947 against \$6,458,000,000 in 1946. This important gain was due largely to the rapid advance in prices during the period, although physical output also increased, as evidenced by a rise of about 10 p.c. in the index of the physical volume of industrial production.

The post-war release of pent-up demand for consumer goods in Canada and abroad and record investment in housing, plant and equipment, together with marked improvement in the labour situation and the availability of raw materials, made 1947 a banner year in the history of the Canadian economy as measured by the value of commodities produced. It is estimated that a further expansion in production was achieved in 1948. The index of industrial production rose from 175.5 in 1947 to 181.5 in 1948, and the general index of wholesale prices advanced nearly 19 p.c. in the same comparison. In addition, the gross income of farm production increased from \$2,130,000,000 in 1947 to \$2,691,000,000 in 1948, indicating a substantial rise in the value of agricultural output.

\* Prepared in the Business Statistics Section, Research and Development Division, Dominion Bureau of Statistics.

† A description of the method used in computing gross and net production figures is given in the *Survey of Production*, issued by the Dominion Bureau of Statistics.

**Leading Branches of Production.**—With the exception of trapping, each of the nine industrial groups shown in Table 1 reached an all-time high in 1947. High building activity and record prices for construction materials resulted in a 47 p.c. increase in the net value of construction over 1946, the most outstanding increase of all the groups. Higher prices and greater physical output also caused forestry and mining to attain their highest positions in history in terms of net value. The former rose more than 34 p.c. over 1946 and the latter, after a four-year recession, nearly 31 p.c. Relatively minor increases were recorded for agriculture, fisheries, electric power and custom and repair. Trapping declined 46 p.c. to its lowest point since 1941. Total manufactures surpassed even the wartime peak in 1944, advancing nearly 24 p.c. over 1946 to a record \$4,292,000,000.

Table 1 classifies industry into primary and secondary production, but naturally many stages of manufacturing are closely connected with primary resources. Fish-curing and -packing plants, for instance, are operated in close relationship to the fishing fleets, sawmills with forest operations and smelters and refineries with metal mining. The gross and net values of production of such processing industries are given separately in Table 2, which indicates the degree of duplication between primary industries and manufactures eliminated in Table 1.

### 1.—Gross and Net Values of Production, by Industries, 1942-47

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process.

**Provincial Distribution of Production.**—Only two provinces failed to establish all-time highs in net value of production in 1947. Prince Edward Island receded slightly from its 1946 peak of \$22,144,000 and predominantly agricultural Saskatchewan, despite a rise of more than 17 p.c. over 1946, failed to better its record of \$528,817,000 established in 1944.

The increase in net production in Quebec over 1946 was nearly 17 p.c.; as the gain in the Canadian total was approximately 20 p.c., the relative importance of this Province was less in 1947 than in the preceding year. Ontario, with a gain of 24 p.c. in 1947 gained ground in this comparison. Despite advances in Nova Scotia and New Brunswick of 6 p.c. and 17 p.c., respectively, these two Maritime Provinces, together with Prince Edward Island, lost in relative importance.

The three Prairie Provinces also suffered in this connection. Manitoba and Alberta, although recording gains over 1946 to establish new maxima, failed to approach the advance in the Canadian total.

The only other province to gain in relative importance in 1947 besides Ontario was British Columbia. Production in this Province rose 32 p.c. over 1946 to establish a new record of \$769,392,000.

<sup>1</sup> Based on estimated population figures as given at p. 155.

**Per Capita Production.**—The total of net production per capita in 1947 recorded a new maximum of \$617 which surpassed the previous record of \$563 in 1944 by nearly 10 p.c.

Due to its pre-eminent position in industrial development, Ontario at \$759 was the leader on a per capita basis. The same outstanding position was characteristic of 1938 and 1944. The per capita return of British Columbia at \$737 was in second place in 1947. The same order existed in the pre-war year but Saskatchewan displaced the Pacific Province in 1944. With a per capita production of \$602, Alberta held third place in 1947, the same as in 1938; it had dropped to fifth place in 1944. Quebec maintained the fourth position in each of the three years. The per capita production of Saskatchewan varied greatly from time to time, depending on the farm output; the standing was fifth in 1947, second in 1944 and eighth in 1938. The production per person in Manitoba at \$495 was sixth in 1947. The Province moved down one place from 1938 but held the same order as in 1944.

New Brunswick, Nova Scotia and Prince Edward Island occupied seventh, eighth and ninth places, respectively, in 1947. The latter showed no change since the pre-war year. Nova Scotia receded from sixth place in 1938 to seventh in 1944 and further to eighth in 1946. New Brunswick advanced from eighth place in 1944 to seventh in 1946.

The highest percentage increase in per capita production in 1947 over 1946 was recorded by British Columbia with a gain of nearly 27 p.c. Ontario was next with an increase of almost 22 p.c., followed by Saskatchewan and New Brunswick with advances of 16 p.c. and 15 p.c., respectively. Prince Edward Island was the only province recording a decline in this comparison. Only the latter and Saskatchewan failed to establish new maxima in per capita production in 1947.

<sup>1</sup> Duplication between agriculture and forestry, as well as duplication under manufactures (see pp. 385-386).

<sup>2</sup> None reported.

**Leading Branches of Production in Each Province.—Maritime Provinces.—**

It is readily apparent that farming is the predominant source of income in Prince Edward Island, accounting for nearly 61 p.c. of the net value of production for that Province in 1947. The increases in value of construction and manufactures over 1946 were not large enough to offset the relatively sharp drop in fisheries which fell to \$2,610,000 from \$4,156,000 resulting in a decline in the total net value. Despite decreases in agriculture, fisheries, trapping and mining, the recorded gains in forestry, construction and manufactures advanced the total value of production in Nova Scotia to a new high in 1947. Similarly, sharp advances in forestry, construction and manufactures produced a new maximum net value in New Brunswick. As a consequence, these three industries advanced in relative importance over 1946 in the three Maritime Provinces.

*Quebec.*—The production of manufactures, excluding the duplication of processing industries, amounted to almost 52 p.c. of the provincial total in 1947; agriculture produced 11 p.c. indicating the marked disparity between the two industries. Forestry is now second in relative importance accounting for more than 17 p.c. of the total. Agriculture, fisheries and trapping recorded declines in 1947 from the preceding year but these were more than offset by important gains in the other industries.

*Ontario.*—The outstanding position of this Province in the field of manufacturing is readily evident. The share of manufactures, excluding processing industries, was almost 61 p.c. of the total in 1947. All industries recorded advances over 1946 except

fisheries and trapping which are also the least in relative importance. Construction gained by nearly 50 p.c., followed by forestry and mining which showed increases of 34 p.c. and 32 p.c., respectively, over 1946. Total manufactures rose nearly 29 p.c.

*Prairie Provinces.*—All industries, except trapping in Manitoba and Saskatchewan and fisheries and trapping in Alberta, showed increases over 1946 in the three Prairie Provinces. The relative importance of agriculture in Manitoba, Saskatchewan and Alberta was 42 p.c., 75 p.c. and 58 p.c., respectively. The dominant position of this industry in Saskatchewan accounts for the marked fluctuations in output of that Province. In all three provinces, manufactures was second in importance, the total for Manitoba having been the highest. As a result of important discoveries of oil in Alberta, the mining industry of that Province will assume greater relative importance in the future.

*British Columbia.*—Trapping and electric power were the only industries that registered declines in 1947 from 1946. These were overshadowed by sharp increases in other industries which contributed to the largest gain over 1946 for the Province as compared to the rest of Canada. Mining and forestry led in this connection with advances of 67 p.c. and 63 p.c., respectively, in 1947. Construction rose more than 43 p.c. while fisheries and manufactures followed with increases of about 40 p.c. and 33 p.c. Manufacturing, forestry and mining, in that order, are the leading branches of industry.

*Yukon and Northwest Territories.*—Mining and trapping accounted for nearly 80 p.c. of the total net value of production in Yukon and the Northwest Territories in 1947. Trapping, as in eight of the nine provinces, fell sharply, while mining registered a gain of 77 p.c. over 1946 which is mainly responsible for the increase of nearly 5 p.c. in the total production.

## Section 2.—Canada's International Investment Position\*

A large balance of Canadian indebtedness to other countries has always been characteristic of Canada's international investment position. Much of the development of Canada has been financed by investments of capital from other countries, particularly in earlier decades. This balance of indebtedness has been reduced from the levels immediately before the recent War which in turn were lower than the earlier peak period around 1930. Net indebtedness to other countries in 1947 was about \$3,900,000,000 compared with more than \$6,000,000,000 in 1930.

*British and Foreign Investments in Canada.*—The relative importance of British and United States capital invested in Canada has greatly changed in recent decades. British capital constituted the largest part of the external capital invested in Canada before the First World War. United States investments underwent a rapid development during and after that War. Their expansion throughout the decade of the 1920's was rapid. By 1926, the first year for which official estimates are available, United States investments in Canada had a value of \$3,196,000,000 compared with British investments of \$2,636,000,000. But during the 1930's some reductions occurred in the amount of external capital invested in Canada.

A further growth in United States investments in Canada took place during the Second World War. By the end of the War these investments had reached a new peak, while British investments in Canada were sharply reduced by repatriations

\* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review of Canada's international investment position appears in the "Canadian Balance of International Payments, 1926-1948" and details on direct investments in "United States Direct Investments in Canada," both reports published by the Dominion Bureau of Statistics, 1949.

of securities. The relative importance in this more recent period of the United States capital inflow in relation to domestic capital formation was less than in earlier periods of capital inflow. Much the larger portion of Canadian developments and activities during the recent War were financed from Canadian sources. As a result of the divergent trends in British and United States investments, total non-resident investments in Canada increased only moderately between 1939 and 1945. In 1946 a further increase to a total of \$7,178,000,000 occurred, chiefly because of the continued expansion of United States investments in Canada. In 1947 there was a slight change in the total to \$7,181,000,000 because redemptions mainly offset new direct investments and reinvestments of earnings. By that date United States investments had reached a new peak of \$5,207,000,000 while British investments amounted to \$1,631,000,000.

The relative position of investments of external capital in relation to total investments of capital in Canada has changed materially in recent years. Non-resident investment now constitutes a smaller part of total investments in Canada than was the case before the recent War. It is difficult to express this relationship in terms of any simple ratio, however, because of the variety of types of investment which must be compared. Important changes have also taken place in the relative position of different types of investment.

Non-resident holdings of Canadian bonds constitute a much smaller proportion of the outstanding funded debt of Canadian governments and corporations than was the case before the recent War. The external holdings of Canadian bonds represented only about 13 p.c. of the total Canadian funded debt at the end of 1947 compared with about one-third of the approximate \$10,000,000,000 of bonds outstanding in 1939. The outstanding changes bringing about this transition have been the great rise during the recent War in the funded debt of the Federal Government, which was largely financed in Canada, and some reduction in the total of Canadian bonds held outside Canada which, in 1939, was \$3,508,000,000 compared with about \$2,853,000,000 in 1947. The reduction in the amount held outside Canada is due to wartime repatriations of Canadian bonds from the United Kingdom. Holdings in the United States and other countries have increased moderately in total since 1939. Non-resident holdings of Government issues, exclusive of railway bonds, were 17 p.c. of the total outstanding in 1939 and in 1947 were about 8 p.c. This change has also been partly due to a reduction in the amount held in the United Kingdom, as well as to the rise in total of internal issues.

Non-resident ownership of Canadian industry, mines, railways, and public utilities is estimated in 1946 to have been about 35 p.c. of total capital invested, a percentage not much different from the corresponding ratio at the beginning of the War.

The ratio of non-resident ownership in Canadian manufacturing companies was somewhat greater than in the case of the broader group of investments referred to, being estimated at about 44 p.c. in 1946. The percentage of different groups of Canadian industry owned abroad varied considerably. This ratio was greatest in the non-ferrous metal industry, being 72 p.c. compared with 25 p.c. in the textile industry. In other groups of industry non-resident ownership was also high reaching 58 p.c. in the chemical industry in 1946. In still other groups the ratio was between one-third and one-half, including vegetable products, animal products, wood and paper products, iron and its products and non-metallic minerals. Furthermore, in some subdivisions of these industries non-resident ownership and control were predominant even though only the minor parts of the groups, when taken as a whole,

were owned abroad. Other important industrial subdivisions are mainly Canadian owned and controlled, e.g., the primary iron and steel and cotton textile industries.

Non-resident ownership of railways and other utilities is large, being 43 p.c. in 1946. The mining and smelting field has also been developed to an important extent by external capital, the ratio of ownership being 36 p.c. Some major units in this field are also non-resident controlled. In financial institutions non-resident ownership is substantial but non-resident control is largely limited to branches of foreign insurance companies, as Canadian banks, trust companies, and most Canadian insurance companies are mainly Canadian controlled.

Direct investments by United States concerns in Canada constitute a particularly important part of the total United States investments of \$5,207,000,000. These investments in branches, subsidiaries and other companies in Canada controlled in the United States had a value of about \$2,544,000,000 in 1947. Being subject to varying degrees of control and active management by the United States owners these direct investments in more than 2,000 concerns constitute a special group of businesses in Canada which have played a significant part in the industrial development of the country.

The other major group of United States investments in Canada is largely made up of portfolios of minority holdings of public issues of the bonds and stocks of Canadian governments and corporations. Holdings of high-grade Canadian bonds by insurance companies and other institutional investors in the United States constitute an important part of the portfolio investments.

Portfolio investments have been the most typical form of British investments in Canada. Most of the repatriations of recent years occurred in this group, the direct investments remaining relatively unchanged. While the latter are now more important proportionately than formerly they continue to be only a minor part of the total, being valued at \$357,000,000 in 1947 or about 22 p.c. of the total British investments of \$1,631,000,000.

**Canadian Assets Abroad.**—Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and liquid reserves in foreign currencies, has risen from \$1,876,000,000 in 1939 to \$3,728,000,000 at the end of 1947. The principal factor in this increase has been the extension by the Federal Government of loans and export credits to the United Kingdom and other countries. At the end of 1948, the total of Canadian Government credits outstanding was \$1,878,000,000. Included in this total are about \$304,000,000 outstanding on the 1942 loan to the United Kingdom, \$1,015,000,000 drawn on the 1946 loan to the United Kingdom, \$528,000,000 of post-war export credits and advances, and \$31,000,000 of other credits outstanding. In addition, at the end of 1948, official liquid reserves aggregated about \$998,000,000, including gold and official United States dollar balances. While these reserves, at that date, were still higher than at the end of 1939 they were considerably less than they were in 1945 and 1946. In addition, Canada had subscribed in 1946 and 1947 to the capital of the International Bank and the International Monetary Fund. By the end of 1947 subscriptions made by Canada to these institutions amounted to \$65,000,000 and \$300,000,000, respectively. A small part of the subscription to the Bank was in the form of convertible exchange and \$75,000,000 of the subscription to the Fund was in the form of gold. The remainder of both subscriptions was made in the form of demand notes of the Federal Government or in Canadian funds.

Besides the officially owned assets referred to above there were the privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939 these privately owned assets constituted

most of the total value of Canadian assets abroad, whereas, since the end of the recent War they have amounted to only a minor part of the total chiefly because of the sharp rise in officially owned assets. Total privately owned portfolio investments abroad have declined in value since 1939 because of the liquidations of Canadian holdings of United States securities. Portfolio holdings of foreign securities owned in Canada have been reduced from \$719,000,000 at the end of 1939 to \$579,000,000 at the end of 1947. This decline is less than the total sales of these securities by private investors during the period, as there was a considerable increase in the book value of holdings of United States stocks. Appreciable gains have occurred in the value of Canadian direct investments in businesses outside Canada which had a value of \$822,000,000 at the end of 1947 compared with \$671,000,000 at the end of 1939.

### 7.—Canadian Assets Abroad, 1930, 1939 and 1945-47

NOTE.—Excluding investments of insurance companies.

<b>Totals.....</b>	<b>822</b>	<b>426</b>	<b>153</b>	<b>579</b>	<b>1,401</b>

The privately owned Canadian investments abroad are chiefly in the United States, the total value of investments in that country at the end of 1947 being \$897,000,000. At the same time investments in other foreign countries, chiefly in Latin America, were \$285,000,000, while investments in the United Kingdom were \$116,000,000, and in other Commonwealth countries \$103,000,000. These figures of investments exclude the investments abroad of Canadian insurance companies and banks, as well as the official assets referred to above, and certain small amounts of miscellaneous investments that are difficult to evaluate.

### Section 3.—Corporation Profits and Income to Shareholders\*

Estimates of corporation profits cover all corporations included in the statistics of national income. Figures for 1944-47 are based on the reports "Taxation Statistics" published by the Taxation Division, Department of National Revenue, that cover practically all taxable corporations. These data required only minor changes to make them conform with the definitions used for national income estimates. For the years prior to 1944, the estimates of corporate profits are based on data on tax collections and tax rates supplied by the Department of National Revenue.

Because of the importance of the rate of taxation in determining the income available for dividend and surplus, a brief description of the changes during the years 1938-49 is given here. The corporation income tax which was 15 p.c. in 1938 and 1939 was raised to 18 p.c. in 1940 and remained unchanged until Jan. 1, 1947, when it was increased to 30 p.c. Effective Jan. 1, 1949, the rate for the first \$10,000 of profits is 10 p.c. and for all profits in excess of \$10,000 it is 33 p.c. From Jan. 1, 1940, to Dec. 31, 1947, corporations were also subject to a tax on excess profits, details of which are as follows:—†

<i>Calendar Year</i>	<i>Excess Profits Tax on Corporations</i>
1940.....	12 p.c. of total profits or 75 p.c. of excess profits, whichever is greater.
1941.....	22 p.c. of total profits or 75 p.c. of excess profits, whichever is greater.
1942.....	First six months—same tax rate as 1941.
1942.....	Second six months—12 p.c. of total profits <i>plus</i> either 10 p.c. of total profits or 100 p.c. of excess profits, whichever is greater.
1943.....	12 p.c. of total profits <i>plus</i> either 10 p.c. of total profits or 100 p.c. of excess profits, whichever is greater.
1944.....	Unchanged from 1943.
1945.....	Unchanged from 1943.
1946.....	22 p.c. of total profits <i>plus</i> 20 p.c. of excess profits; beginning this year "excess profits" are defined as profits in excess of 116½ p.c. of standard profits.
1947.....	15 p.c. of excess profits.
1948.....	No tax payable.

Corporation profits, before taxes and dividends, reached a wartime peak in 1942, declined in 1943 and 1944, and then rose to all-time highs of \$1,828,000,000 in 1947 and \$2,103,000,000 in 1948. From 1939 to 1948 the increase was 240 p.c. Because of the sharp increase in the rate of taxation after 1940, however, income after taxes showed a more moderate increase of 169 p.c. between 1939 and 1948. Taxes rose sharply from 18 p.c. of profits in 1939 to 40 p.c. in 1940, and remained between 40 p.c. and 50 p.c. of profits until 1948, when the percentage dropped to 35. These figures of taxes levied do not include the refundable portion of the excess profits tax.

Dividends declared to stockholders remained fairly constant from 1939 to 1946, but increased fairly sharply in 1947 and 1948 to reach a level of \$533,000,000 in the latter year as compared with the 1939 figure of \$287,000,000. It should be

\* Prepared in the National Income Section, Research and Development Division, Dominion Bureau of Statistics.

† Refundable Portion: From July 1, 1942, to Dec. 31, 1945, those companies taxable at the 100 p.c. rate on excess profits were entitled to a refund of a portion of the taxes paid. The refundable portion was defined as 20 p.c. of all profits in excess of 116½ p.c. of standard profits.

noted that the figure for dividends paid out does not include dividends paid to Canadian corporations since intercorporate dividends cancel out for the corporate sector as a whole.

Undistributed profits, that is, profits after taxes and dividends, reached a peak of \$827,000,000 in 1948, as compared with \$219,000,000 in 1939. This, together with \$544,000,000 in depreciation charges gives a total of \$1,371,000,000 available for replacement and expansion of plant and equipment, and for building up inventories. Investment figures are not available for corporations, but data on Canadian gross home investment indicate that capital investment reached record highs in 1947 and 1948 with a large part of this expansion being financed by corporation earnings.

### 9.—Profits, Taxes and Dividends of Canadian Corporations, 1939-48

(Millions of Dollars)

NOTE.—Corporate profits before taxes include corporate taxable income, depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts, and conversion to a calendar year basis.

Item	1939	1940	1941	1942	1943	1944	1945	1946	1947	1948 <sup>1</sup>
Net profits of corporations <sup>2</sup> .....	618	814	1,124	1,317	1,302	1,221	1,226	1,450	1,828	2,103

<sup>1</sup> Subject to revision.

<sup>2</sup> National income estimate. See Table 10 for adjustment for taxable profits.

**Analysis by Industries.**—Most industries showed little change in net profits from 1944 to 1945 but there was a 15 p.c. increase in total profits before taxes from 1945 to 1946, and a 27 p.c. increase from 1946 to 1947. In both 1946 and 1947 the pulp and paper industry (including printing and publishing) showed the largest absolute increase in profits. Other industrial groups whose profits increased considerably in 1947 over their 1946 levels were: forestry, other metal mining, vegetable food products, wood and wood products, primary iron and steel, machinery, automobiles, and wholesale and retail trade. The gold-mining industry, the profits of which have been declining steadily since 1944, was one of the few groups to show a decrease in profits.

Net income after taxes shows much the same pattern as net income before taxes but, because of the drop in the 1947 tax rate, 1947 net income after taxes was 53 p.c. above that for 1946, as compared with a 27 p.c. increase before taxes.

## 10.—Corporation Profits, Before and After Taxes, by Industries, 1944-47

NOTE.—Figures are for the company fiscal years ended in the calendar years 1944 to 1947. The source of information is "Taxation Statistics" published annually by the Taxation Division, Department of National Revenue, Ottawa.

<sup>1</sup> Estimated refundable excess profits taxes of \$68,600,000 in 1944, \$67,500,000 in 1945 and \$17,800,000 in 1946 were not included in taxes deducted.

<sup>2</sup> Total profits of all corporations, as presented in Table 9, differ from the total of all corporations as shown here since, for national income purposes, charitable donations and depletion charges are added back to profits and adjustments are made for renegotiation of war contracts and conversion to a calendar-year basis.

**Section 4.—Estimates of National Wealth**

No official estimate of national wealth has been made since that of 1933. Latterly great emphasis has been placed on developing up-to-date series of national income and time has not permitted extensive work on estimates of national wealth. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture, including stock raising and horticulture, is the most important of the primary industries of the Canadian people, employing, according to the Census of 1941, 25·2\* p.c. of the total gainfully occupied population and 30·5\* p.c. of the gainfully occupied males. In addition, agriculture provides the raw materials for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see pp. 16-17 of this volume.

An introductory outline of the historical background of Canadian agriculture is given at pp. 187-190 of the 1939 Year Book.† The present Chapter treats of current governmental activities and includes comprehensive statistics of agriculture, such as: farm income, values of agricultural production and farm capital, field crops, farm live stock and poultry, dairying, fruit, special crops, prices and miscellaneous statistics. World statistics of agriculture, formerly compiled from the publications of the International Institute of Agriculture, were not available during the War but statistics of grain production for world countries will be found at pp. 455-458.

## Section 1.—The 1948-49 National Agricultural Program and Policy‡

The financial strength and expansion in Canadian agriculture, experienced at the beginning of 1948, continued throughout the year. In the early months of 1949 some farm prices declined slightly and there was an indication that some minor farm products were not flowing as freely to international markets as previously.

\* Including persons on Active Service normally employed in agriculture.

† See list of reprints under "Agriculture", at the front of this edition.

‡ Prepared under the direction of J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

During 1948, net and gross farm income had both reached an all-time high point; farm operating expenses continued their upward climb and prices paid and received by farmers showed increases.

During the fiscal year 1948-49, the activities of the Agricultural Prices Support Board were increased.

An important piece of legislation was the Agricultural Products Marketing Act. This Act, passed in April, 1949, provides for the marketing of agricultural products in interprovincial and export trade. The Act states that:—

“Whereas it is desirable to improve the methods and practices of marketing agricultural products of Canada; and whereas the legislatures of several of the provinces have enacted legislation respecting the marketing of agricultural products locally within the province; and whereas it is desirable to co-operate with the provinces and to enact a measure respecting the marketing of agricultural products in interprovincial and export trade . . . . The Governor in Council may by order grant authority to any board or agency authorized under the law of any province to exercise powers of regulation in relation to the marketing of any agricultural product locally within the province, to regulate the marketing of such agricultural product outside the province in interprovincial and export trade and for such purposes to exercise all or any powers like the powers exercisable by such board or agency in relation to the marketing of such agricultural product locally within the province.”

The soil conservation program of the Federal Government was expanded in 1948-49. The current program covers large rehabilitation schemes in British Columbia and the Prairie Provinces (Prairie Farm Rehabilitation Act) and in the Maritimes.

The Maritime Marshlands Rehabilitation Act was passed in May, 1948. Under an arrangement to take effect in 1949, the Federal Government will assume full responsibility for all engineering requirements and the construction and reconstruction of the main protective works. The marsh owners of the Provinces of Nova Scotia and New Brunswick will be responsible for the drainage of canals and ditches behind the main works, and organization of the marsh associations for better farm operation and practices.

It is estimated that there are approximately 100,000 acres that can be reclaimed.

**Production Programs.**—The annual Dominion-Provincial Conference held Dec. 6 to Dec. 8, 1948, was chiefly concerned with market outlets for the 1949 crop. International exchange problems continued to hamper economic recovery and to impede a return to multilateral trade. On the whole, the general objective was a maintenance of the current level of farm output.

**Farm Income.**—Farm cash income from the sale of farm products (including supplementary payments) established an all-time high record in 1948 of \$2,470,611,000, 25 p.c. above the 1947 figure of \$1,973,853,000. This marked increase in cash income was, in part, due to higher prices for farm products and, in part, to the payment on wheat participation certificates and oats and barley equalization fees.

**Post-War Subsidy and Price Policy.**—The extension of the Transitional Measures Act for another year to Mar. 31, 1950, continues the Government's power to maintain existing price controls on agricultural and other commodities, although all domestic farm-products were decontrolled by July, 1949.

Along with removal of price control most subsidies had been discontinued by 1948. The payment of three “wartime” subsidies has continued: freight assistance on western feed grain shipped into the eastern provinces and British

Columbia; production and transportation assistance on lime for agricultural purposes and quality premiums on hogs. Newfoundland became eligible for these forms of assistance in the spring of 1949.

Assistance in 1948 took the form of price support for some agricultural commodities. The Agricultural Prices Support Act, 1944, was amended in 1949, its powers being extended to Mar. 31, 1950. Under this Act, the Agricultural Prices Support Board has authority to support the price of any agricultural commodity except wheat. Owing to good production and restricted export outlets the Board supported 1948 crops of the following commodities:

*Potatoes.*—In Prince Edward Island and designated counties of New Brunswick the Board paid \$1.15 per 100 lb. for Canada No. 1 grade in the bin on the farm.

*Apples.*—Nova Scotia apples sold fresh were supported at \$3.90 per bbl. and for processing into dried apples or concentrated juice at \$2.50 per bbl. For British Columbia apples remaining unsold, producers are guaranteed \$2.00 per box up to a maximum of 250,000 boxes.

*Dried Beans.*—The Board paid \$3.75 per bu. for Ontario dried white beans, grades Canada No. 1 and No. 2 delivered to the bean warehouses up to July 31, 1949. The sum of \$200,000 was allotted to meet the deficiency between the support price and the average price realized by farmers in marketing their product. In addition, the Board purchased and shipped to Palestine for relief purposes approximately 38,000 bu. at \$3.75, which, including shipping costs, will total a further \$200,000.

*Honey.*—The Board was authorized to purchase up to 5,000,000 lb. in car-lot quantities, at 14 cents per lb. for White No. 1 grade pasteurized, or 13 cents per lb. if unpasteurized, with appropriate differentials for lower grades, less the export freight rate to Montreal.

*Dried Skim Milk.*—The Board can spend up to \$1,000,000 from May 21, 1949, for the purchase of dried skim milk at 9.5 cents per lb. for roller and 10.75 cents per lb. for spray, f.o.b. country points.

*Butter.*—Because of a marked decline in domestic prices of butter, the Board, on Apr. 1, 1949, was authorized to buy No. 1 creamery butter basis 58 cents per lb. Montreal.

*SO<sub>2</sub> Fruits.*—The Department of Agriculture provided assistance in disposing of surplus British Columbia sulphur dioxide raspberry pulp.

**Export Contracts.**—To enable the Federal Government to fulfil its obligations under the food agreements and also to export food supplies to distressed countries, Parliament, under the Agricultural Products Act, 1947, authorized the Minister of Agriculture to sell or export agricultural products, other than wheat, and establish commodity boards vested with the necessary regulatory powers. This Act is on an annual basis but may be continued in force for further 12 month periods with the approval of Parliament. In 1949 the Act was extended to Mar. 31, 1950.

Contracts for 1949 cover fewer commodities and smaller quantities than in 1948, owing to the United Kingdom dollar position. At the beginning of 1948 contracts covered wheat, bacon, beef, mutton, lamb, cheese and eggs. The wheat, mutton and lamb contracts were fulfilled. The beef contract was cancelled about the middle of 1948 and on Aug. 16, the restriction on shipment of live cattle and beef to the United States was removed. The bacon contract was increased, but shipments did not meet the original lower figure. The egg contract was reduced by mutual agreement. The cheese contract was not met.

Contracts for 1949 were as follows:—

*Bacon.*—The contract for the calendar year covers 160,000,000 lb. grade A Wiltshire sides at \$36 per 100 lb. free-along-side Canadian seaboard. This price is the same as in the 1948 agreement.

*Cheese.*—The 1949 contract runs from Apr. 1 to Dec. 31, 1949, and calls for 50,000,000 lb. at 30 cents per lb. first grade free-on-board factory. Both quantity and price remain unchanged from the previous contract.

*Eggs.*—This contract is for 46,000,000 doz. eggs to be shipped between Feb. 1 and Dec. 31, 1949, at 52.5 cents per doz. for grade A large storage eggs at Montreal. This price represents a drop from the previous contract price.

*Wheat.*—Exports of wheat are administered by the Canadian Wheat Board. The four-year wheat contract covers the 1946 to 1949 crops inclusive. In each of the last two years the minimum quantity specified is 140,000,000 bu. From the 1948 commitment, 450,000 long tons of flour were to be shipped; from the 1949 quantity, 400,000 long tons, which is 100,000 long tons above the minimum amount provided for in the agreement. The price for No. 1 Manitoba Northern in store Fort William—Port Arthur, Vancouver or Churchill is \$2 per bu., plus five cents carrying charge for both the 1948 and 1949 crops.

*Fibre Flaxseed.*—The Federal Government has had agreements with the Government of Northern Ireland for quantities of Canada No. 1 grade fibre flaxseed from the 1947, 1948 and 1949 crops. The first agreement covered 26,000 bu., each of the last two, 10,000 bu. The price under the 1947 and 1948 contracts was \$8.50 per bu. free-on-board British steamer Canadian seaboard; under the 1949 agreement it was reduced to \$8.00 per bu.

*Other Products.*—The Minister of Trade and Commerce on May 9, 1949, announced that the United Kingdom agreed to make a token purchase of apples, and a small quantity of sulphur dioxide fruit pulp now held by the Federal Government.

## Section 2.—Government in Relation to Agriculture

It is provided in Sect. 95 of the British North America Act that “in each province the legislature may make laws in relation to agriculture in the province”; it is also declared “that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture—shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada”. As a result of this provision, there exists at the present time a Department of Agriculture, with a Minister of Agriculture at its head, in the Federal Government and in each of the provinces except Newfoundland, where agricultural affairs are dealt with by the Agricultural Division of the Department of Natural Resources.

### Subsection 1.—Canadian Relationship with FAO\*

The Fourth Session of the Conference of the Food and Agriculture Organization of the United Nations, held at Washington, D.C., Nov. 15-29, 1948, reviewed the world food situation, considered the technical work of FAO and gave careful attention to financial and administrative matters having to do with the Organization. Admission of Saudi Arabia to membership increased the number of member nations to 58.

\* Details regarding the organization of the Food and Agriculture Organization as well as the first, second and third Conferences are given in previous Year Books beginning with the 1946 edition.

Among the main developments in FAO in 1948 was the organization of divisions having to do with rural welfare and commodity distribution together with a further strengthening of the regional officers.

As a member of the Council of FAO as well as one of the principal food exporters of the world, Canada has continued to maintain a close relationship with FAO. Canada's representative acted as Chairman of the Finance Committee through the regime of the Executive Committee when FAO was being organized and continued in this capacity under Canada's membership in the Council of FAO until the Washington Conference in 1948. Canada has been a member of the International Emergency Food Committee since its establishment, a Canadian representative having been elected Chairman for 1948-49. Membership in the Working Party on International Commodity Arrangements was accorded Canada at the Washington Conference in 1948. The chairmanship of this Working Party has also been assigned to the Canadian representative.

Liaison with FAO Headquarters on non-policy matters is maintained through the Canadian Interdepartmental FAO Committee composed of representatives of those departments of the Federal Government that are particularly concerned with the work of FAO. In addition to functioning in an advisory capacity to the Government, this Committee assists in the collection of information required by FAO in its work and also serves as a means of disseminating information coming from FAO.

Canada has also been a source of technical assistance for FAO. In addition to providing representatives on the various technical advisory committees established by FAO, technical assistance has been supplied to missions and conferences in connection with grain production and marketing, the preservation of stored products, agricultural engineering and various problems in the fisheries industry. The results of research work carried on in Canada in connection with the control of rinderpest have already aided in the establishment of a program for the control of this dread disease in the Far East. Samples of corn and other seeds have also been provided for testing by other member nations.

### Subsection 2.—The Federal Government\*

#### Farm Credit

The Federal Government has set up several agencies to handle the matter of farm credit; the Canadian Farm Loan Board is empowered to make long-term loans to farmers† and the chartered banks, under the Farm Improvement Loans Act, to provide intermediate and short-term credit.

**The Canadian Farm Loan Board.**‡—This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934 and c. 16, Statutes of 1935) and, as an agency of the Crown in the right of Canada, administers a system of long-term mortgage credit for farmers throughout the country. The Board commenced its work in 1929 and since 1935 has carried on lending operations in all provinces.

\* Except as otherwise indicated this material was prepared under the direction of J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

† In addition to the credit supplied by the Canadian Farm Loan Board, and in order to meet the demand for long-term loans on easier terms of repayment and on a higher ratio in relation to farm values than that available from the Canadian Farm Loan Board and to facilitate refinancing indebtedness, the Province of Quebec established the Quebec Farm Credit Bureau which commenced operations in March, 1937.

‡ Revised by W. A. Reeve, Secretary, Canadian Farm Loan Board, Ottawa.

The Board lends money to farmers to pay debts, purchase live stock and farm equipment, assist in the purchase of farm land, make farm improvements and for any other purpose considered as improving the value of the land for agricultural purposes.

Loans are made on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands and not in excess of \$5,000; such loans are repayable on an amortized plan over periods up to twenty-five years.

Further advances by way of second mortgage may be made to first mortgage borrowers who require additional funds. The amount of such additional advances is not to exceed 50 p.c. of the first mortgage loan, nor the aggregate of first and second mortgage loans to exceed two-thirds of the appraised value of the farm land mortgaged nor, in any event, an aggregate of \$6,000.

The interest rate on loans made on or after Apr. 2, 1945, is  $4\frac{1}{2}$  p.c. on first mortgage and 5 p.c. on second mortgage. The interest rate on loans made prior to Apr. 2, 1945, is 5 p.c. on first mortgage and 6 p.c. on second mortgage.

Particulars of the capital requirements of the Board and other details appear at p. 185 of the 1940 Year Book.

From the commencement of operations in 1929 to Mar. 31, 1948, the Board made 29,093 first mortgage and 9,461 second mortgage loans for a total amount of \$60,728,957 disbursed. Of this amount, \$37,069,120 has been repaid. At Mar. 31, 1948, the principal assets of the Board amounted to \$23,038,948 made up as follows: 14,790 first mortgage loans, \$21,932,657; 1,442 second mortgage loans, \$658,832; 306 sale agreements, \$402,632; and 20 parcels of real estate, \$44,827.

The average amount lent annually during the first ten years of operations was \$3,860,000. The volume of loans approved dropped from \$4,348,950 in 1940 to \$1,215,450 in 1943 but, since then, has increased steadily to \$3,460,550 in 1948. The trend in recent years is toward decreased borrowing to pay debts and increased borrowing to purchase land and farming equipment.

### 1.—Applications for Farm Loans Received, Loans Approved and Loans Disbursed, Years Ended Mar. 31, 1940-48

NOTE.—Figures for 1930-39 are given at p. 186 of the 1940 Year Book.

**Farm Improvement Loans Act.\***—The Farm Improvement Loans Act, 1944, c. 41, is designed to provide short-term and intermediate-term credit to farmers. Under its provisions, the Federal Government authorizes the chartered banks of Canada over a three-year period to make loans up to \$250,000,000 under a 10 p.c. Government guarantee against loss. The Act was extended another three years by an amendment passed at the 1948 session of Parliament. The maximum of an individual loan is \$3,000, the interest rate is 5 p.c. simple interest and the repayment periods are from one to ten years, depending upon the amount borrowed and the purpose for which the loan is obtained. Loans under the Act are restricted to farmers.

There are two broad aims behind this legislation, the first of which is the improvement and development of farms. Loans are made to enable a farmer to equip his farm with modern, labour-saving equipment, more and better live stock, and to make such other improvements necessary to maximum farm production. The second is the improvement of living conditions on farms. These loans enable the farmer to provide his home with electrification, refrigeration, heating systems, water systems, and all those things that make for comfort and convenience in living and do much to eliminate drudgery for the farm housewife.

There are seven classes of Farm Improvement Loans: (1) purchase of agricultural implements; (2) purchase of live stock; (3) purchase of agricultural equipment or installation of a farm electrical system; (4) alteration or improvement of a farm electrical system; (5) fencing or drainage; (6) construction, repair or alteration of, or addition to, farm buildings; (7) general improvement or development of the farm.

\* Prepared by D. M. McRae, Supervisor, Farm Improvement Loans, Department of Finance, Ottawa.

Up to Dec. 31, 1948 (which period covers the first forty-six months of operation of this Act), 69,818 loans were made for a total of \$60,754,259.93. During this period of operations under the Act there have been no claims for losses. Particulars of loans by provinces are:—

### Research and Experimentation

In its efforts to aid the farmer in the solution of his problems, the Department of Agriculture conducts, on a broad scale, scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the microbiology of soils and foods, the breeding and testing of new varieties of plants and animals, investigations of crop production and cultural methods and many other matters. The two main divisions of the Department that carry on such work are Science Service and Experimental Farms Service.

**Science Service.**—The work of Science Service is directed toward the solution of practical problems of agriculture through the application of scientific investigation. The work is carried on in co-operation with other agencies within and without the Department, not only at the central laboratories at Ottawa, but at branch laboratories all across the country.

Many studies are being carried on in the field of animal pathology. Among the more important are a comprehensive investigation of the antigenicity of tuberculin and a fundamental investigation of the reactivity of fowl to various invading agents, with a view to perfecting diagnostic procedures. Bang's disease and mastitis of cattle are being investigated, while with poultry major attention is focused on pullorum disease and coccidiosis.

The research work of the Division of Bacteriology and Dairy Research is devoted to problems of milk production and the manufacture of dairy products, food processing and preservation, soil fertility, and to other varied problems of agricultural production bearing on the science of microbiology.

Dairy research includes studies in improved methods for clean milk production and the evaluation of milk quality. Projects in cheese investigation deal with better control of the manufacturing process, and the cause and remedy of defects of flavour and texture in Cheddar cheese. Methods for improving the keeping quality of butter are also under study.

Studies in food microbiology are directed towards improvement in quality of Canadian fruit and vegetables preserved by different methods, with special attention to frozen-pack products. Improvement in production and in control methods for dried-egg products are under study.

Fundamental studies of soil micro-organisms are being conducted as a basis for application to practical problems of soil fertility and crop health. Research is also conducted on the inoculation of seed and soil by nitrogen-fixing bacteria; microbiological methods for evaluating soil fertility; and the relation of soil micro-organisms to soil-borne plant diseases. Other research projects deal with such diverse problems as foulbrood diseases of bees, the development of microbiological methods for vitamin assay, and the detection of new anti-biotics which may have important applications in agriculture.

Weeds constitute one of the more important problems with which the farmer must contend. In the botanical laboratories, research is in progress on the occurrence and distribution of weeds throughout Canada. Life histories of weeds are studied together with methods of control of certain species. Physiological studies on the effects of herbicides are being carried on.

The Dominion Arboretum and Botanic Garden grows an extensive collection of trees and shrubs that is of much interest to horticulturists, botanists and the general public. A plant identification service is provided and research conducted on the classification and distribution of the native and introduced plants of Canada.

In an effort to reduce the losses from seed-borne diseases of crop plants, seed-testing techniques are being investigated with a view to determining the presence of pathogenic organisms in or on the seed. Various commercial disinfectants and seed-treating machines are under test to determine their value in the control of seed-borne diseases.

Diseases of cereal and forage crops are under constant study with the object of evolving effective measures and developing resistant varieties which will produce satisfactory crops in the presence of disease organisms. Similar investigations are conducted with horticultural crops with major attention directed to crop protection and disease control rather than development of resistance. In the case of potatoes, however, breeding for disease resistance is being carried out in co-operation with the Experimental Farms Service.

In the chemical laboratories of Science Service, research projects are in progress on animal nutrition, food and plant chemistry, soils, fertilizers, and vitamin and physiological chemistry. A study of factors affecting the digestibility of feeds and an evaluation of feeding stuffs on the basis of digestibility, together with research on the biological value of proteins and non-protein nitrogen in which stable isotopic tracers are employed, will provide useful information for the scientific feeding of different classes of live stock. Vitamin studies include the mode of action of vitamins A and D, the utilization of precursors and the effect of other dietary factors on vitamin action, together with a critical evaluation of both chemical and biological methods of vitamin assay. Studies in progress demonstrate the usefulness and the dangers of hormonal stimulation and of endocrine depressors for dairy cattle and poultry. Of interest also to the stockman is the chemical and biological diagnosis of pregnancy and the tattooing of live stock for identification purposes.

Research in soil chemistry includes a study of the colloid fractions of soils in relation to soil types, soil fertility and phosphate fixation; a study of the composition of soil organic matter and its maintenance in cultivated soils; an investigation of the mineralogical composition of Canadian soils; the adaptation of chemical methods for the determination of fertilizer requirements of soils, and studies of the minor element content of soils in relation to physiological disorders of plants and animals. Soil fertility investigations are conducted in the field and greenhouse

in connection with fertilizer trials on soil types, the effect of soil amendments on soil reaction and crop growth, the effect of crop rotations on the nitrogen and organic matter content of prairie soils, the production of canning and orchard crops, and the reclamation of saline soils resulting from flooding by sea water.

Investigations under way in the field of entomology embrace studies of insects affecting man and animals, forest, field, garden and orchard crops, and materials in transit or storage. Specific projects relate to the studies of harmful and beneficial insects, appraisal of their damage, and methods for their control. The methods of control under study include management practices, cultural measures, chemicals, and the production and dissemination of parasites and diseases that attack noxious insects.

Studies on insects attacking man and animals include a wide range of household pests, cattle warbles, ticks, and lice; the preparation and testing of repellents for protection from biting flies; and control of mosquitoes and houseflies over extensive areas. Considerable attention is being given to the newer insecticides and practical methods for their application.

Forest insect control activities embrace the nation-wide forest insect survey, begun in 1936, and intensified in recent years in an effort to devise a reliable means of forecasting impending outbreaks. Particular attention is given to such widespread destructive pests as the spruce budworm and sawflies attacking conifers, the hemlock looper and bark beetles, the bronze birch borer and the vectors of Dutch elm disease. Control investigations centre around long-term forest management projects, the use of parasites and diseases, and the exploration of the possibilities of chemical control.

Field-crop and garden insect investigations include studies on grasshoppers, the wheat-stem sawfly, wireworms, cutworms, white grubs, the European corn borer, root maggots, potato aphids, and nematodes. The abundance and distribution of these pests are measured annually by extensive field surveys which provide a basis for planning control campaigns. Insecticides are widely employed in these investigations. Where possible, however, modification of cultural practices are utilized, especially in the control of insects injurious to field crops.

Of the orchard pests, codling moth, European red mite, eye-spotted budmoth, apple maggot, oriental fruit moth, oyster-shell scale and pear psylla are among the subjects of major study. Emphasis is placed on the use of recently developed insecticides, including their combination with fungicides, and on the effect of spray programs upon the whole biotic complex of the orchard. Insect control by parasites and diseases and by orchard management is receiving increased attention.

Research on stored-product insects embraces such pests as the rust-red grain beetle, the Indian meal moth, mites, and spider beetles. Practical controls have been developed utilizing fumigants, abrasives, mechanical methods, proper storage construction, and plant management.

Special consideration is given at the Dominion Parasite Laboratory, Belleville, Ont., to the importation and production of insect parasites of injurious species for distribution in forests, fields, gardens, orchards, and greenhouses. Parasites are employed in Canada against thirty important insect pests.

A national collection of insects is maintained. The specialists engaged in this enterprise provide an identification service in addition to performing formal studies in taxonomy and biology of insects.

Activities designed to prevent the introduction into Canada of foreign insects and plant diseases are centred in the Division of Plant Protection. In addition, this Division is responsible for the examination of plants and plant products being exported to countries requiring that such material be free of plant pests and diseases. The supervision of the production of seed potatoes throughout Canada in accordance with the regulations in effect; the supervision of surveys and control of newly introduced destructive plant pests and diseases; and the supervision of fumigation experiments to destroy insect life in plants and plant products at varying temperatures with various lethal fumigants are all functions of the Division. The effects of fumigants on suitability of products for human consumption or for seed are also under study.

### **The Dominion Experimental Farms**

At pp. 349-352 of the 1948-49 edition of the Year Book an outline is given of the organization and the accomplishments of the Dominion Experimental Farms. No change in that outline has been made and in order to save space the reader is referred to that edition for this information.

### **Subsection 3.—Provincial Departments of Agriculture\***

Each of the provinces except Newfoundland, under Sect. 95 of the British North America Act, has a Department of Agriculture which directs general agricultural policies, administers provincial legislation affecting agriculture, and provides extensive services to assist rural people within the province. A brief treatment of these provincial departments follows.

**Newfoundland.**—Government agricultural services in Newfoundland, since the establishment of Commission Government, have been operated by the Agricultural Division of the Department of Natural Resources. The Agricultural Division maintains an extension service and encourages agricultural development by the payment of bonuses for the purchase of pure-bred sires and for the clearing of new land, assistance with agricultural exhibitions, the payment of subsidies on agricultural limestone, and the rendering of a soil survey service. Practical farm training is given to young men at the Government Demonstration Farm.

The chief crops in Newfoundland are hay, potatoes, turnips, cabbage, carrots, beets, other vegetables and small fruits.

**Prince Edward Island.**—The Department of Agriculture is presided over by a Minister, assisted by a Deputy Minister, a Dairy Inspector, a Pathologist and Veterinarian, a Soil Assistant, two County Representatives, a Superintendent of Women's Institutes and an Assistant.

**Nova Scotia.**—Provincial agricultural policies in Nova Scotia are administered by the Department of Agriculture and Marketing, with the Minister's Office and those of the Deputy Minister, the Director of Marketing, and the Superintendent of Agricultural Services located at Halifax. The Department is composed of several Branches, each headed by a Director. The Branches include: Agricultural Engineering Services; Animal and Poultry Services; Chemistry, Soils and Fertilizer Services; Dairy Services; Extension Services; Field Crops Services; Horticultural and Biological Services; Immigration and Land Settlement; and Marketing Services. In

\* The material in this Subsection was provided by the Departments of Agriculture of the various provinces.

addition, the Nova Scotia Agricultural College which is operated by this Department is also considered as a separate Branch and is headed by a Principal. With the exception of the agricultural representatives who are located in the 18 county offices, all technical officials are located at the Nova Scotia Agricultural College, Truro.

**New Brunswick.**—Provincial Government policy concerning agriculture in New Brunswick is directed by the Department of Agriculture. This Department has as its head the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following Services: extension, live stock, dairy, veterinary, poultry, horticulture, field husbandry, soils and crops, plant protection, potato production and marketing, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, and apiculture.

**Quebec.**—The Department of Agriculture of Quebec is divided into the following branches: agricultural education, rural economics, extension, animal husbandry, horticulture, field husbandry, information and research, handicrafts and home economics, health of animals and rural engineering. Each branch is divided into sections dealing with particular problems. There are also many other special organizations such as the Farm Credit Bureau, the Research Council, the Rural Electrification Bureau, and the Dairy Industry Commission. The Provincial Entomologist and a Provincial Botanist are included on the staff of the Department.

To encourage better farming, an Agricultural Merit Competition for junior and senior farmers is held each year; County Farm Improvement Competitions are also held. Co-operation is widespread in rural Quebec where there are 645 agricultural co-operatives with 62,474 members and 89 agricultural societies with more than 26,000 members, together with 114 clubs for young farmers with 2,356 members and 866 clubs for farm women (Cercles de Fermières) with a total membership of 49,000.

Agricultural instruction is given in 3 Colleges of Agriculture leading to the B.S.A. degree, in 17 secondary Schools of Agriculture and in 6 Agricultural Orphanages.

**Ontario.**—The Ontario Department of Agriculture maintains administrative, educational, extension and financial assistance services to agriculture in Ontario. These services are carried on through 12 branches and 6 institutions: (1) the Live Stock Branch promotes live-stock improvement policies, licenses and examines stallions and gives support to pure-bred live-stock associations; (2) the Crops, Seeds and Weeds Branch assists in the development of good cultural practices, the use of improved strains of seed, the promotion of improved pastures and the eradication of weeds; (3) the Dairy Branch provides an inspection, instruction and supervision service for all creameries and cheese factories; (4) the Farm Economics Branch carries on cost studies of agricultural production in co-operation with agricultural organizations; (5) the Fruit Branch enforces fruit and vegetable regulations and provides an information service to growers; (6) the Co-operation and Markets Branch administers the Farm Products Control Act and the Credit Unions Act, and supervises co-operatives under the Co-operative Marketing Loans Act; (7) the Milk Control Board, under the Milk Control Act, regulates and supervises the marketing of fluid milk; the Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions; (8) the Northern Ontario Branch gives assistance to farmers

and settlers in northern Ontario in connection with land clearing and breaking; (9) the Agricultural Representative Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and has direction over junior farmer activities; (10) the Women's Institute Branch gives leadership and direction to farm women's organized activities; (11) the Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop-reporting service and gathers and disseminates data on crops, live stock and dairy products; (12) the Ontario Farm Service Force is organized to secure and provide help for farmers during their busy seasons. The Department is responsible for the financing and administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm at Ridgetown and the Demonstration Farm at New Liskeard.

**Manitoba.**—The Department of Agriculture of Manitoba serves through the following branches: agricultural extension; live stock; dairy; agricultural publications and statistics; weeds administration; farm labour; debt adjustment; and Provincial Veterinary Laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, junior live stock, boys' and girls' clubs and women's work, with specialists devoting their attention to these subjects. Meetings, field days, and short courses are held throughout the Province. There are 23 agricultural representative offices in Manitoba, each representative serving from 1 to 5 municipalities.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese- and butter-making, issues licences to makers of dairy products and to cream graders, furnishes plans and specifications in connection with the establishment of new creameries and cheese factories, etc.

The Agricultural Publications and Statistics Branch publishes and distributes, annually, approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 15 municipal weed-control units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent perennial weeds, supervises weed demonstrations, investigates weed problems, conducts weed surveys and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of this laboratory being available to veterinaries and live-stock owners.

**Saskatchewan.**—The Department of Agriculture in the Province of Saskatchewan maintains the following services: (1) Administration, which supervises the administrative activities of the Department, including personnel, policies and expenditures under legislative appropriation; (2) Agricultural Representative Service, which is the extension branch. Under the Agricultural Act, the Province is divided into Agricultural Conservation and Improvement Districts where qualified men carry on a program of agricultural improvement, featuring stability in agriculture, by soil conservation and improved live stock, grain and forage production. An Agricultural Co-operative Extension program functions in this Province with the Federal Government and the University of Saskatchewan; (3) the Apiary Branch, which registers beekeepers, inspects apiaries and promotes better management practices; (4) the Conservation and Development Branch, which promotes the

organization of activities to save, conserve or develop the soil and water resources of the Province (irrigation, drainage, reclamation) and assists, in collaboration with the Federal Government, in the installation and administration of works in province-wide project programs. This Branch operates irrigation and dry-land winter-feed farms, licenses water users and the sale of farm implements in Saskatchewan; (5) the Dairy Branch, which licenses and inspects dairy manufacturing plants and frozen food locker plants, licenses cream graders and milk and cream testers, and promotes herd improvement through cow-testing centres and organized Herd Improvement Associations; (6) the Field Crops Branch, which promotes good cropping, tillage and soil conservation practices, encourages the use of alfalfa and grass mixtures for hay production, the improvement of native meadows and farm pastures, the maintenance of fodder and feed and seed grain reserves, administers emergency policies in fodder and feed grain, encourages control measures for insect and weed pests and organizes provincial campaigns for insect and weed control, encourages the use and distribution of good quality seed of recommended varieties and operates a seed-cleaning plant; (7) the Lands Branch, which administers lands in the settled part of Saskatchewan owned by the Province which are used for agricultural or pasturage purposes, classifies Crown land according to the use for which it is suited and disposes of such land under long-term lease or reservation for inclusion in a private unit or a land utilization project; (8) the Live Stock Branch, which encourages the use of suitable animals for breeding purposes by establishment of pure-bred sire areas, gives assistance in purchase and distribution of stallions, bulls, boars and rams, examines and licenses stallions, arranges for exhibits of live stock, registers brands, bonds and licenses live-stock dealers and agents, wool-warehouse operators, wool collectors and buyers, promotes warble fly and other live-stock insect control and advises on live-stock feeding and management; (9) the Poultry Branch, which maintains flock-culling and turkey-grading and -banding services, administers an approved hatchery policy, licenses wholesalers and first receivers of poultry products, hatcheries and hatchery agents, bonds produce dealers and poultry buyers, and promotes flock improvement; (10) the Statistics Branch, which, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers data regarding crops and live stock, including production, marketing and income; (11) the Veterinary Branch, which investigates conditions with a view to safeguarding the health of live stock and poultry and co-operates with Federal officials and practising veterinarians in disease control.

**Alberta.**—To serve the people of Alberta, the Department of Agriculture is divided into a number of branches, each concerned with a particular phase of the industry.

The Field Crops Branch deals with all matters pertaining to the utilization of the soil and production of crops. There have been set up, in the Province, Agricultural Service Boards on a municipal basis. These Boards carry on certain local programs in co-operation with the Department.

The Live Stock Branch aids in maintaining the quality of Alberta herds and flocks through policies designed to assist farmers in securing pure-bred herd sires. The live-stock industry is also given assistance by the services of an artificial insemination laboratory established at the School of Agriculture at Olds. The work of the Branch includes the inspection of stallions and the administration of Acts relating to stock inspection, brands, domestic animals, and the sale of horned cattle.

The Dairy Branch conducts chemical and bacteriological analyses and administers all matters pertaining to the dairy industry. Prescribed standards in construction and sanitation practices, enforced through licensing and inspection, are required of all dairy manufacturing, milk distributing and frozen food locker plants.

Growth of the poultry industry during and since the War has greatly increased the work of the Poultry Branch. This Branch carries on programs to improve poultry husbandry, and through a flock approval policy the control of pullorum disease is being accomplished. It also maintains an up-to-date demonstration and breeding plant at Oliver.

The Veterinary Services Branch was recently reorganized, and now comprises the former office of the Provincial Veterinarian and the Veterinary Laboratory. The new Branch is doing much to help producers understand disease problems and their control.

The Apiculture Branch administers the Bee Diseases Act, which requires the registration of all beekeepers and the maintenance of an inspection service. The Branch also carries on a considerable amount of general educational work.

The Agricultural Extension Service operates through 35 offices, in which there are located 39 District Agriculturists and 15 District Home Economists. The District Agriculturists work with farmers, assisting them with their many problems and carrying to them the various Departmental policies designed to improve the standard of agricultural practices throughout the Province. The District Home Economists provide a complementary service for farm women, aiding them in matters pertaining to foods and nutrition, sewing and clothing, home administration problems, etc.

Two schools of agriculture, located at Olds and Vermilion, provide 400 students each year with a practical education in agriculture and home economics. The course is of two years duration. During the month of July, the Schools are in constant use for various short courses for farm men and women and young people.

The Alberta Junior Farm and Home Clubs educate farm young people in the practical phases of farming and homemaking, and train them in the essentials of good citizenship. In 1948 there were 327 junior clubs, with a total membership of about 5,452.

The Department issues bulletins dealing with agricultural and home economics topics. It assembles statistical data which are required by many organizations within the Province.

**British Columbia.**—The Department of Agriculture consists of four main divisions: (1) the Administrative Division is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture, supervision of extension programs, collection of agricultural statistics, compilation of reports and publications, preparation of material for agricultural exhibitions, supervision of farmers' and women's institutes; and markets extension; (2) the Animal Industry Division supervises live-stock work including: promotion and improvement of animal production, fur farms, brand inspection, inspection of beef grading, control of contagious diseases of animals, eradication of insect pests detrimental to live stock, and field extension connected with animal nutritional work. This Division consists of general live-stock, veterinary, dairy, and poultry branches; (3) the Plant Industry Division includes: horticulture, field crop, plant pathology, entomology and apiculture branches; fruit, vegetable and seed production and surveys dealing with orchards, small fruits, flowering bulbs and greenhouse areas

are supervised; suppression of insect pests and plant disease inspection with control of noxious weeds and general promotion of crop production; (4) the Agricultural Development and Extension Division includes field extension work through the district agriculturists service, clearing agricultural lands for production, agricultural engineering, farm labour supply, and junior club projects.

Extension Division officials of the Department are located in 25 agricultural centres of the Province.

#### **Subsection 4.—Provincial Agricultural Colleges and Schools**

A treatment of this subject will be found at pp. 203-213 of the 1943-44 Year Book.

### **Section 3.—Statistics of Agriculture\***

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the decennial Census of Canada and each quinquennial Census of the Prairie Provinces. The more important data from the 1941 Census are given at pp. 250-254 of the 1946 Year Book; see pp. 390-396 of the 1948-49 edition for recent data on the Quinquennial Census of 1946. The Bureau also collects and publishes both primary and secondary statistics of agriculture including statistics of the production and distribution of agricultural commodities on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling and sugar industries and cold-storage holdings.

In the collection of annual and monthly statistics the Federal Department of Agriculture, the Provincial Departments of Agriculture, and such agencies as the Board of Grain Commissioners and the Canadian Wheat Board co-operate with the Bureau. Many thousands of farmers throughout Canada also voluntarily send in reports.

#### **Subsection 1.—Farm Income**

**Cash Income from the Sale of Farm Products.**—The estimates of farm cash income in this subsection are based on reports of marketings and prices received by farmers for principal farm products and are subject to revision. The estimates include the amounts paid on account of wheat participation certificates, oats, barley and flax adjusting and equalization payments and those Federal and Provincial Government payments which farmers receive as subsidies to prices. Farmers' cash income from the sale of farm products totalling \$2,449,865,000 in 1948 broke all previous record returns. Compared with the revised and previous all-time high of \$1,962,276,000 established in 1947, the 1948 figure represents a gain of \$487,589,000 or about 25 p.c. When supplementary payments are included, cash income in 1948 amounted to \$2,470,611,000 as against \$1,973,853,000 a year earlier.

The substantial gain in farm cash income in 1948 can be attributed largely to rising prices and the large sums of money distributed by the Canadian Wheat Board and western grain companies in the form of grain equalization and participation payments. During 1948 these payments, totalling \$178,590,000, equalled approximately one-third of the gain in the cash income over 1947.

High levels of domestic purchasing power as a result of full employment and high wages, together with a strong world-wide demand for short supplies of producer and consumer goods, were important factors affecting the general level of agricultural prices

\* Revised in the Agriculture Division, Dominion Bureau of Statistics, Ottawa.

which averaged almost 20 p.c. higher than in 1947. Early in 1948 it was announced that the United Kingdom had agreed to pay Canada higher prices for purchases of bacon, beef, eggs and cheese. Prices of poultry meat were also strengthened during the year as a result of the lowering of the United States tariff on Jan. 1, 1948, and the subsequent substantial shipments southward. On Apr. 1, 1948, the initial price to prairie wheat producers for No. 1 Northern at the Lakehead was advanced from \$1.35 to \$1.55 per bu. At the same time the Canadian Wheat Board prepared to disburse adjusting payments which made this 20-cent increase retro-active to Aug. 1, 1945. Further strength was injected into livestock prices with the lifting of export controls in August, 1948, which since September, 1942, had embargoed Canadian shipments into the United States of beef cattle and calves and beef and calf products.

Payments made under the provisions of the Prairie Farm Assistance Act, are not included in the totals in Table 3 for "Cash Income from Farm Products" but are included in the grand totals in the year in which payment is made under the heading "Supplementary payments".

### CASH INCOME FROM THE SALE OF FARM PRODUCTS

† Payments under the Wheat Acreage Reduction Act, the Prairie Farm Assistance and the Prairie Farm Income Act.

### 3.—Cash Income from the Sale of Farm Products, by Sources, 1947 and 1948

NOTE.—Figures for years prior to 1947 will be found in corresponding tables in previous editions of the Year Book.

<sup>1</sup> Subject to revision.

<sup>2</sup> Includes in total only the adjustment payments made by grain companies on oats and barley delivered by western producers during the period Aug. 1 to Oct. 21, 1947.

**Net Farm Income.**—Preliminary estimates in 1948 indicate that the net income of Canadian farm operators from farming operations totalled \$1,693,315,000, the highest net income figure recorded since the publication of comparable statistics from 1938. Revised net farm income figures for 1946 and 1947 are \$1,161,395,000 and \$1,234,909,000, respectively. Net farm income rose to an unprecedented level in 1948 and also established an all-time record for farm cash income from the sale of farm products. Increases were also shown in the value of home consumed farm produce. While the decrease in the value of the year-end change of farm-held live-stock inventories more than offset some increase in the value of year-end changes of farm-held grain inventories in 1948, it was insufficient to offset the gains in cash income and income in kind so that gross income set a record.

During 1948 farm operating expenses continued to rise and increased to \$1,083,556,000 in 1948, a gain of \$115,184,000 or nearly 12 p.c. over those of 1947. Gains were registered for nearly all expense items, the most significant of which occurred in the case of live-stock feeds which increased by approximately \$45,000,000 or about 19 p.c. compared with the previous year.

#### 5.—Net Income of Farm Operators from Farming Operations, 1947 and 1948<sup>1</sup>

Item	1947	1948

<b>Totals.....</b>	<b>1,161,395</b>	<b>1,234,909</b>	<b>1,693,315<sup>2</sup></b>

<sup>1</sup> Includes estimated rental value of farm homes and supplementary payments made under the provisions of the Prairie Farm Assistance Act and small belated payments made under the provisions of the Prairie Farm Income Scheme and the Wheat Acreage Reduction Program.

<sup>2</sup> Total includes some coarse grain adjustment payments not included in provincial totals.

### Subsection 2.—Value of Agricultural Production and of Farm Capital

Publication of the series formerly known as "Gross and Net Values of Agricultural Production" has been discontinued. These series contained duplications and, as a result, were not comparable with value of production estimates for other industries. Work is now under way on new series which will replace those previously published.

**Value of Farm Capital.**—The items included in the term "farm capital" as used in Table 7 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. The value of lands and buildings for intercensal years is based on the value of occupied farm lands reported annually by crop correspondents; annual values of farm implements and machinery are estimated on the basis of sales reported each year.

#### 7.—Current Value of Farm Capital, by Provinces, 1946 and 1947

NOTE.—Figures for years prior to 1946 will be found in corresponding tables in previous editions of the Year Book.

Province	1946*				1947

<sup>1</sup> Includes poultry and animals on fur farms.

**Average Values of Farm Lands.**—The estimated average value of occupied farm land in Canada for 1948 is reported at \$39 per acre. This represents an increase of 11 p.c. over the average value indicated in 1947 and an increase of 56 p.c. over the 1939 average. The total average is determined by weighting the provincial averages by the area of occupied farm land in each province according to the latest census figures available. The upward trend in farm land values from pre-war levels reflects, at least in part, the relative changes which have occurred in the price levels of farm products and of the things which farmers buy. This is illustrated by the fact that the Bureau's index of farm prices of agricultural products for 1948 was 152.5 p.c. above the 1935-39 level, while for the same year the index of prices of commodities and services used by farmers had advanced 83.3 p.c. from the 1935-39 base-period level.

<sup>1</sup> Includes unimproved lands and buildings.**Subsection 3.—Index Numbers of Farm Prices and Production**

In August, 1948, the index numbers of farm prices of agricultural products established an all-time high of 263·9 (1935-39=100). Since that time the movement of this index has been generally downward and in December it stood at 259·7. The annual average for the year, 252·5, was the highest on record. Table 9 shows the trend over the period 1939-48.

**9.—Average Index Numbers of Farm Prices of Agricultural Products, by Provinces, 1939-46, and by Months, 1947 and 1948**

(1935-39=100)

NOTE.—A description of this index, its coverage and the methods used will be found in the "Quarterly Bulletin of Agricultural Statistics" for October-December, 1946.

The Dominion Bureau of Statistics in 1949 issued for the first time the index numbers of physical volume of agricultural production. In keeping with other Bureau indexes the base period for the construction of this index is the five-year period 1935 to 1939 inclusive. The index is constructed in such a manner that it represents a measure of "net farm production". This is achieved by removing duplication, e.g., when feed grains credited to field crops production also appear in the various forms of live stock and live-stock products.

The high point of the index, 164.2, was reached in 1942. In 1948 it stood at 125.2 as against 115.8 in 1947.

#### 10.—Index Numbers of Physical Volume of Agricultural Production in Canada, by Provinces, 1935-48

(1935-39=100)

NOTE.—For a description of this index, methods and coverage, see Dominion Bureau of Statistics "Quarterly Bulletin of Agricultural Statistics" for July-September, 1949.

#### Subsection 4.—Acreages, Yields and Values of Field Crops

The post-war world wheat shortage was relieved somewhat during 1948. In Western Canada wheat farmers were assured of a minimum price of \$1.55 per bushel, basis No. 1 Northern in store Fort William-Port Arthur, in addition to payments accruing from the five-year pool operated by the Canadian Wheat Board. Despite adverse weather during the spring seeding season, the acreage seeded to wheat was 24,100,000 acres in 1948 which was only slightly below the 1947 level of 24,300,000 acres. Fortunately, growing conditions following the very late spring proved favourable and fairly satisfactory crops were harvested in Western Canada. Production in 1948 of all major field crops was well above that of 1947.

The acreage seeded to oats in 1948 was slightly above that of 1947 but the barley acreage at 6,500,000 was nearly 1,000,000 acres below the 1947 seedings of this crop. Reflecting the world-wide shortage of bread grains which prevailed up to harvest time in 1948, the price for rye had risen to high levels with the result that Canadian rye growers almost doubled their seedings in the spring of 1948. The acreage devoted to flaxseed also was increased, reaching a near-record total of nearly 2,000,000 acres.

Canada's 1948 wheat production amounted to 393,300,000 bu. as compared with 341,800,000 bu. in 1947. Production of oats increased from 278,700,000 bu. in 1947 to 358,800,000 bu. in 1948, an increase of almost 29 p.c. The decrease in total acreage in barley was offset by a much higher yield in 1948, production amounting to 155,000,000 bu. as against 141,400,000 in 1947. The 1948 rye crop totalled 25,300,000 bu. while the production of flax amounted to 17,400,000 bu.

\* Sufficient information on which to base the different types of farming areas in Newfoundland is present lacking.

The gross farm value of all major field crops produced in 1948 on Canadian farms amounted to \$1,673,800,000, an all-time record for the series which was begun 41 years ago. The gross farm value of Canadian field crops in 1948 was approximately 9 p.c. higher than the 1947 value of \$1,531,000,000.

The values per unit assigned to each 1948 crop in Table 12 of this Subsection represent average prices from Aug. 1, 1948 to Jan. 31, 1949. Total values of crops in this table are gross values and do not represent cash income received from sales.

### 11.—Acreages and Values of Field Crops, by Provinces, 1941-42 and 1944-48

NOTE.—Some of the figures in this table, particularly the values, have been revised since the publication of the 1948-49 Year Book.

### 12.—Acreages, Yields and Values of Principal Field Crops Grown in Canada

NOTE.—Comparative figures for Canada as a whole for earlier years are given in the corresponding tables of previous editions of the Year Book. For a record of certain figures of acreage, production and value, see Statistical Summary of the Progress of Canada at the beginning of this volume. For the majority of crops, the long-time average covers the years 1908-40. Figures for 1948 are preliminary and therefore subject to revision.

<sup>1</sup> Subject to revision.

**Stocks of Grain in Canada.**—Table 14 shows the stocks of Canadian grain on hand on July 31, for the years 1939-49, in both Canada and the United States as well as the amounts held on farms at that date. Farm stocks are given for Canada and the Prairie Provinces separately, while an additional column indicates the amounts held in country elevators in the Prairie Provinces.

## 14.—Carryover of Canadian Grain as at July 31, 1939-49

NOTE.—Figures for years prior to 1939 will be found in corresponding tables in previous editions of the Year Book.

Swine.....	1,366,083	1,207,619	1,733,850	2,353,828	3,634,778	3,404,730	4,774,828	6,174,309

<sup>1</sup> Cows in milk or in calf.

<sup>2</sup> Cows and heifers, two years old or over, kept mainly for milk purposes.

Live stock on farms as obtained from the census data cannot be separated from the total numbers except for the past three census years. Table 16 gives the numbers of live stock on farms for those years.

## 16.—Live Stock on Farms, Censuses of 1921, 1931 and 1941

Item	1921	1931	1941
	No.	No.	No.
Horses.....	3,451,752	3,113,909	2,788,795
All cattle.....	8,369,489	7,973,031	8,517,007

Other cattle.....	5,146,845	4,450,030	4,890,982
Sheep.....	3,200,467	3,627,116	2,839,948
Swine.....	3,324,291	4,699,831	6,081,389

<sup>1</sup> Cows in milk or in calf.

<sup>2</sup> Cows and heifers, two years old or over, kept mainly for milk purposes.

Annual estimates, based on census data, are compiled for numbers of animals on farms. The indexes in Table 17 are the estimates of live stock for the respective years expressed as percentages of the numbers on farms during the period 1935 to 1939. Table 18 gives the estimates by provinces for 1944-48 and Table 19 the average values per head of farm live stock in the same years.

## 17.—Index Numbers of Animals on Farms, 1940-48

(Average 1935-39=100)

NOTE.—Comparable figures for 1906-36 are given at pp. 211-212 of the 1945 Year Book and for 1937-39 at p. 365 of the 1948-49 edition.

Year	Horses	Milk Cows	Other Cattle	All Cattle	Sheep and Lambs	Swine
1940.....	98.1	96.5	95.8	96.1	93.6	152.4
1941.....	98.4	95.9	99.1	97.7	92.1	154.4
1942.....	99.4	97.4	106.6	102.6	103.7	180.9
1943.....	98.0	100.4	118.9	110.9	112.2	206.9
1944.....	96.6	103.9	130.0	118.7	120.9	196.5
1945.....	91.2	105.8	137.0	123.4	117.5	153.0
1946.....	77.7	98.2	120.6	110.9	95.4	124.7
1947.....	71.7	97.8	122.0	111.5	87.8	139.0
1948.....	67.2	97.9	116.9	108.6	73.0	113.3

The reduction in the number of horses has been going on steadily for a number of years with the trend towards greater mechanization in agricultural production. The total number of horses on farms in Canada was under 2,000,000 in 1948, the lowest number since 1906. The number of cattle decreased by 3 p.c. from the 1947 total but there was practically no change in the number of milk cows, the increases in Quebec, Ontario and Alberta offsetting the decreases in the other provinces. Substantial decreases took place in numbers of swine and sheep. The peak number for swine was reached in 1943 and except for a moderate recovery in 1947 the decrease has been continuous. Favourable marketing conditions during the first six months of 1948 led to a considerable liquidation of swine and the estimated numbers on farms at June 1, 1948 was 19 p.c. below the 1947 figure. The number of sheep has declined steadily since 1944 despite relatively favourable prices for both lamb and wool.

### 18.—Numbers of Farm Live Stock, by Provinces, June 1, 1944-48

NOTE.—Figures for years prior to 1944 will be found in the corresponding tables in previous editions of the Year Book.

Under the Meat and Canned Goods Act, establishments such as abattoirs and meat-packing plants that prepare meat products for export are subject to inspection. Local wholesale butchering and such slaughterings as are carried out by retail butchers and by farmers for their own use are not included in Table 20. Actually, the growth of the slaughtering and meat-packing industry has been accompanied by a concentration of the major part of the production into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products. These figures, therefore, are fairly inclusive. The industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XVII. It normally ranks among the three largest manufacturing industries in Canada in gross values of production but it owes its importance to the value of raw products obtained from the farmer and rancher rather than to the value added by the manufacturing process.

**Wool.**—Total wool production in Canada in 1948 amounted to 11,915,000 lb. as compared with an estimate of 14,090,000 lb. for 1947. The very significant decline in wool production in 1948 reflected the continued decrease in sheep numbers. Shorn wool production again decreased in every province. With fewer sheep available for slaughter, production of pulled wool also decreased by 422,000 lb.

Domestic disappearance of wool in 1948 was 102,167,000 lb. as compared with 88,882,000 lb. in 1947. As data on stocks are not available, the estimates of domestic disappearance are subject to error to the extent that changes in stocks actually took place. Wool imports during 1948 increased by about 15,000,000 lb. over the previous year.

The farm value of shorn wool and farm cash income from the sales of wool rose steadily from 1939 to 1944. Since 1945, however, the rapid decline in the number of sheep has resulted in less income from wool despite a gradual rise in farm prices. The average farm price of wool for Canada increased from 28.2 cents per lb. in 1947 to 28.9 cents per lb. in 1948.

**21.—Estimated Production, Exports, Imports and Apparent Consumption of Wool, 1941-48**

**NOTE.**—All estimates are on a 'greasy' basis. Comparable statistics of production for the years 1920-29 are given at p. 219 of the 1939 Year Book, for 1930-36 at p. 214 of the 1945 edition and for 1937-40 at p. 368 of the 1948-49 edition.

## Subsection 6.—Poultry and Eggs

The number of poultry on farms in Canada on June 1, 1948, was less than at the corresponding date in 1947 but the value per head increased in the case of turkeys, geese and ducks. The value per head of hens and chickens did not change although the total value declined more than 8 p.c. The decrease in birds was common to all kinds of farm poultry, the drop being 18 p.c. Cost of feed, without a sufficiently commensurate increase in egg prices, was the reason given by many producers for reducing their flocks.

The decline in hens and chickens brought down the total egg production 5 p.c. from the high production of 1947, but the average value per dozen for all grades and all purposes was 44 cents as compared with 36 cents in 1947, and the reduced quantity in 1948 had a greater value than the total 1947 value. The average number of layers throughout 1948 was less by 2,242,000 birds, but the production per average hen was 4 eggs higher.

Poultry-meat production of all poultry in 1948 was 17 p.c. less than in 1947. Fowl and chicken meat was 82 p.c. of the 1947 figures, turkey meat 90 p.c., goose meat 87 p.c. and duck meat 99 p.c.

## Subsection 7.—Dairying

**Production and Utilization of Milk.**—While total milk production has not varied significantly since 1940 there has been considerable increase in population and in consumer spending power which has resulted in slight shifts in the milk utilization pattern. Total estimated production in 1948 was 16,645,141,000 lb., a decline of almost 600,000,000 lb. from 1947 and of nearly 875,000,000 lb. from 1943. However, the quantity used for factory production in 1948 was 12 p.c. less than in 1943 and fluid trade requirements increased 8 p.c. While cheese production fell off markedly and creamery butter decreased slightly in 1948 from the previous year, there was a considerable increase in the production of concentrated milk products.

**Farm Value of Milk Production.**—Gross farm value of milk production at \$484,942,000 in 1948 increased 20 p.c. over 1947 and was approximately 63 p.c. greater than in 1943. The upward trend of prices for dairy products was reflected in a steady advance in farm values of milk production since 1939. The gross value in 1948 was more than three times the average gross value of annual production during the five-year period 1935-39.

## 25.—Production and Utilization of Milk in Canada, 1943-48, and by Provinces, 1946-48

NOTE.—Figures for the years 1921-41 are given at p. 6 of the report "Dairying Statistics of Canada, 1947"; for the year 1942 at p. 237 of the 1946 Year Book.

1948	41,235	230,408	146,915	45,293	21,091	484,942

**Butter Production.**—The total butter production in 1948 amounted to 347,274,000 lb. This was an increase of 27,000 lb. over 1947, but a decrease of 21,226,000 lb. as compared with the high point of 368,500,000 lb. in 1941. The production of creamery butter in 1948 amounted to 284,431,000 lb., representing a decline of 6,521,000 lb. from 1947. This was more than offset by an increase in the estimated dairy-butter make.

1948	284,431,000	62,843,000	347,274,000	88,781,000	730,000	89,511,000

<sup>1</sup> Factory made cheese includes cheddar and other cheese made from whole milk. The latter, which amounted to 2,879,000 lb. in 1947 and 2,083,000 lb. in 1948, was produced in Quebec, Ontario, Manitoba, Saskatchewan and Alberta.

**Cheese Production.**—The demand for cheese during the War gave this commodity an important position relative to other dairy products. The 1942 output of 208,250,000 lb. was the highest since the turn of the century. However, with the increasing demand for other dairy products this position could not be maintained, and there has been a continuous decline since 1945. In 1948 the total production of 89,511,000 lb. was 36,060,000 lb. less than that of 1947. The 1948 output of cheddar cheese was 86,698,000 lb. and, combined with 2,083,000 lb. of factory cheese other than cheddar, amounted to a total factory production of 88,781,000 lb. The estimated production of farm-made cheese is approximately 730,000 lb. per year.

**Concentrated Milk Products.**—The data in Table 28 show the wide range of products being manufactured in concentrated milk plants and creameries equipped with powder manufacturing facilities. For purposes of classification these products are divided into whole-milk products and milk by-products. The former reached a total production of 309,196,000 lb. in 1948, an increase of approximately 49,500,000 lb. over the previous year. Production of evaporated milk, the most important member of this group, reached a total of 251,331,000 lb. in 1948, an increase of approximately 39,500,000 lb. as compared with the previous year and 67,000,000 lb. as compared with 1944. The 87,572,000 lb. of milk by-products produced in 1948 represented a gain of approximately 9,000,000 lb. over the previous year and 41,500,000 lb. over 1944. The upward movement has been continuous since 1943.

#### 28.—Production of Concentrated Milk Products, 1944-48

<sup>1</sup> Includes lactose.

**Ice Cream.**—The Canadian output of ice cream in 1948 was approximately 25,000,000 gal., an increase of 1,714,000 gal. over the previous year. Compared

with 1939, the 1948 output showed an increase of approximately 16,000,000 gal. On a per capita basis the 1948 disappearance of ice cream amounted to 1.95 gal. or 27.90 lb. expressed as milk.

### 29.—Production of Ice Cream, by Provinces, 1944-48

NOTE.—Figures for years prior to 1944 will be found in corresponding tables in previous editions of the Year Book.

**Domestic Disappearance.**—The estimated consumption of milk and cream shown in Table 30 on a milk basis amounted to 4,255,366,000 pt. in 1948. This represented a reduction of over 210,000,000 pt. from 1947 but an increase of over 401,000,000 pt. from 1942. On a per capita basis the average daily consumption was 0.90 pt. in 1948 as compared with 0.92 pt. in 1942 and a high point of 1.02 pt. in 1945 and 1946 when subsidies were in effect.

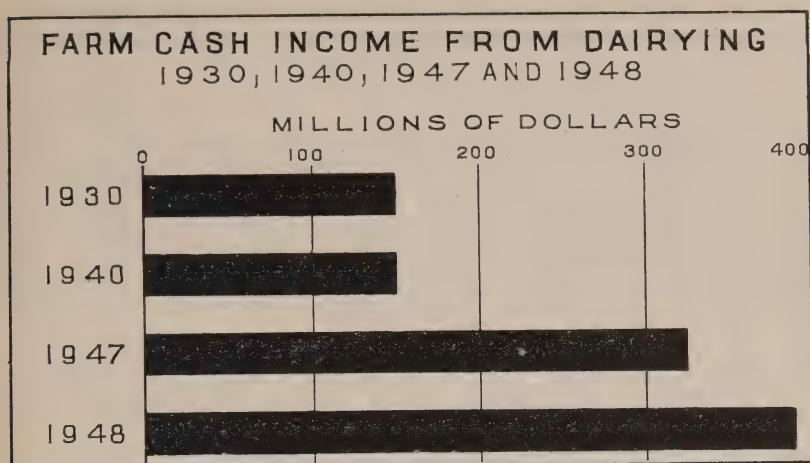

The domestic disappearance of butter in 1948 (including creamery, dairy and whey butter) amounted to approximately 369,000,000 lb. as compared with 352,000,000 lb. in 1947 and 337,000,000 lb. in 1943. On a per capita basis, the figures for the corresponding years were 28.61 lb., 27.96 lb. and 29.25 lb.

The domestic disappearance of cheese (including all varieties of factory cheese and farm-made cheese) was approximately 47,000,000 lb. in 1948, an average of 3.63 lb. per capita. This represented a considerable decline from the previous year when the disappearance was approximately 66,000,000 lb. or 5.25 lb. per capita.

The domestic disappearance of concentrated whole-milk products increased substantially, moving up to 17.63 lb. per capita in 1948 as compared with 16.50 lb. in the previous year; while milk by-products fell to 4.05 lb. per capita in 1948 from 4.58 lb. per capita in 1947.

Domestic disappearance of dairy products in terms of milk represented the equivalent of approximately 1,205 lb. per capita in comparison with 1,235 lb. in the previous year.

<sup>1</sup> Includes malted milk, cream powder, 1943-48, and sub-standard products of a variable fat content, 1944-48, items which do not appear separately in this table. <sup>2</sup> Includes milk by-products items not separately listed, namely, condensed buttermilk, powdered buttermilk, sugar of milk and casein, 1943-48. <sup>3</sup> Ice cream in terms of milk is included in the total for all products.

## Subsection 8.—Horticulture

A survey of the floriculture and nursery stock industry was conducted annually until 1943 when, as a wartime measure, it was discontinued.

**Fruit Production.**—The production of fruit in Canada on a commercial scale is confined to well defined areas in five provinces. In Nova Scotia production is mainly centred in the counties of the Annapolis Valley and to a lesser extent in Hants County; in New Brunswick, it is centred in the counties of the St. John River Valley and Westmorland County. The fruit districts in Quebec include the Montreal area, North Shore area, the Eastern Townships and Quebec City district; in Ontario, all the counties adjacent to the St. Lawrence River and Great Lakes as far as Georgian Bay—the most famous sections being in the Niagara district; and in British Columbia the four well defined fruit areas are the Okanagan Valley, Fraser Valley, the Kootenay and Arrow Lakes section and Vancouver Island.

These areas yield large quantities of plums, peaches, apricots, cherries, strawberries, raspberries and other small fruits. A short article is given below on the production of grapes; this will be followed in succeeding editions of the Year Book by short synopses of other fruits.

**Grapes.**—Grapes were among the first fruits to be cultivated in Canada. Early records of French settlers in the city of Quebec show that grapes were found growing wild in abundance and that attempts were made to cultivate them. The first records of the area devoted to grapes in Canada are to be found in Census Volume I, 1891. In that year there were 5,951 acres of vineyard of which 4,956 acres or 83 p.c. were located in Ontario. In those days Essex County had the greatest area with 1,062 acres followed by Lincoln with 968 acres, Wentworth with 881 acres and Welland with 548 acres. The area in British Columbia amounted to only 30 acres. By 1941 the Canadian acreage had expanded to 17,489 acres, 73 p.c. of which were located in Ontario. Lincoln is now the most important grape-growing county with 11,593 acres followed by Wentworth and Welland Counties. The area in British Columbia also has expanded and now amounts to 562 acres.

The bulk of the grape crop is consumed by the wineries. In 1947, the latest year for which information is available, the wineries used 48,327,000 lb. out of a total crop of 73,803,000 lb. The chief wine varieties are Concord and Niagara

although such varieties as Delaware, President, Lomanto, Duchess and Catawba are also used for this purpose. The older vineyards are planted to the *labrusca* type or fox grapes while the newer plantations are made up of hybrid varieties which are crosses between the *labrusca* and the *vinifera* or European type of grape.

Table 32 shows the estimated commercial quantity and value of fruit grown in Canada.

**32.—Estimated Commercial Production and Shipping-Point Values of Fruit, 1945-47, with Five-Year Averages, 1940-44**

Kind of Fruit and Year	Quantity	Weight	Value	Average Value per Unit of Quantity

#### Subsection 9.—Special Agricultural Crops

**Maple Sugar and Syrup.**—Production of maple sugar and maple syrup is confined to the provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships area of Quebec which is famous both in Canada and the United States as the centre of the maple industry. Usually most of the exports, which go chiefly to the United States, are in the form of sugar but during the 1947-48 season syrup shipments reached an all time high of 403,000 gal. Sugar shipments that season were equivalent to 463,000 gal. of syrup. During 1948-49 exports of syrup remained at the comparatively high level of 368,000 gal. Sugar exports, on the other hand, increased substantially to 5,826,000 lb. The exports of sugar, expressed in terms of syrup, equalled 583,000 gal.

<sup>1</sup> To nearest thousand.

Most of the syrup sold in Canada is marketed direct to the consumer by the producers in one-gallon cans but a considerable amount of both sugar and syrup is sold each year to processing firms. These firms melt the sugar and blend it with syrup to produce a uniform grade of syrup which is then sold in bottles.

**Sugar Beets and Beetroot Sugar.**—Sugar beets are grown in Quebec, Ontario, Manitoba and Alberta, six sugar-beet factories being located in these provinces. In Quebec, sugar beets have been grown only since 1942 and production centres around St. Hilaire, south of Montreal in the Eastern Townships. The area harvested in Quebec in 1947 was 1,600 acres although the plant at St. Hilaire has a capacity to handle production from 10,000 acres. In Ontario, sugar-beet factories are located at Wallaceburg and Chatham. The acreage in Ontario declined steadily from 38,169 in 1940 to only 9,287 in 1943. Since that year, however, the acreage has again expanded and in 1947, 18,600 acres were cropped, though production still remained well below the capacity of the two plants and only the Chatham factory processed beets in 1947. Sugar-beet production in Manitoba also declined during 1941-44. In 1940, the area harvested was 15,682 acres while in 1947 the area amounted to only 9,000 acres. The sugar-beet plant in Manitoba is located at Fort Garry. Sugar-beet production in Alberta is carried on in the neighbourhood of Raymond and Picture Butte. This area has seen a steady increase during the last six years with the acreage in 1947 amounting to 29,300 acres.

### 35.—Acreages, Yields and Values of Sugar Beets, and Quantities and Values of Refined Beetroot Sugar Produced, 1939-47

NOTE.—Figures for years prior to 1939 will be found in corresponding tables in previous editions of the Year Book.

**Fibre-Flax.**—Fibre-flax is grown chiefly in Quebec and Ontario with smaller areas located in Alberta and British Columbia. In 1948 the producers in Quebec almost doubled their acreage but in the other provinces the acreage continued to show the downward trend that has been evident for the last few years. Uncertainty of markets and competition from other countries, where production costs are not

as high, have discouraged many growers who are now turning to more profitable enterprises. A recent development has been the sale of flax straw of oil varieties to firms in the United States where it is manufactured into cigarette paper.

### 36.—Acreages, Yields and Values of Flaxseed, Fibre and Tow, 1939-48

NOTE.—Figures for the years 1915-30 will be found at p. 284 of the 1934-35 Year Book, and for 1931-38 at p. 224 of the 1942 edition.

<sup>1</sup> Includes turbine tow.

<sup>2</sup> Includes estimated production from 8,040 acres carried over from previous processing year.

**Tobacco.**—The tobacco acreage expanded rapidly during the years 1943 to 1947 under the influence of an almost unlimited domestic and overseas demand. The high point was reached in 1947 when 125,267 acres were harvested. Traditionally the United Kingdom is Canada's largest export market but, since the imposition of import restrictions by the United Kingdom, this market has been very uncertain. The currency controls were somewhat relaxed to permit the importation of 12,500,000 lb. of Canadian tobacco during the 1947-48 season and during the 1948-49 season \$7,000,000 of British funds were made available for tobacco purchases in Canada. Additional payments were made to growers in Ontario and British Columbia for grading and tying as follows: 1½ cents per lb. for flue-cured tobacco in Ontario in 1943; 1½ cents per lb. for flue-cured and burley in Ontario from 1944 to 1947, inclusive, and on dark for 1946 and 1947; and 2 cents per lb. on flue-cured, burley and dark tobacco in Ontario and on flue-cured in British Columbia for 1948.

### 37.—Acreages, Production and Values of the Commercial Crop of Leaf Tobacco, 1944-48

NOTE.—Figures for years prior to 1944 will be found in corresponding tables in previous editions of the Year Book.

**Apiculture.**—Honey production in Eastern Canada returned to more normal levels in 1947 after two years of unusually small crops. Farm prices reached an all-time high with the average for the crop amounting to 25 cents per lb. The pre-war export market for Canadian honey was the United Kingdom but since the War very little has moved in that direction. During the period of the sugar shortage, exports of honey were forbidden and the domestic market readily absorbed the crop. During the 1947-48 season when a surplus developed and shipments might have again been resumed, the United Kingdom government put exchange controls into effect which amounted to a virtual embargo against Canadian honey. In addition, prices being offered by importers were much lower than Canadian growers would accept, so that even with all restrictions removed shipments would not have been made.

**40.—Beekeepers and Colonies, Production and Values of Honey and Beeswax, 1939-47**

NOTE.—Figures for years prior to 1939 will be found in corresponding tables in previous editions of the Year Book.

### Subsection 11.—Census Statistics of Agriculture in the Prairie Provinces, 1921-46

Statistics illustrating the major changes that have taken place in agriculture in the Prairie Provinces for the quinquennial years 1921-46 will be found at pp. 390-396 of the 1948-49 edition of the Year Book.

### Subsection 12.—Statistics of the Newfoundland Census of Agriculture, 1945

The latest Census of Newfoundland and the Coast of Labrador was taken in 1945. This Census covered both population and agriculture. Tabulations, at the request of Newfoundland, were carried out at the Dominion Bureau of Statistics. Some data on these subjects have already been published in census bulletins and as further tabulations are made, additional information will be made available.

The Census of Agriculture ascertained the number of those cultivating land by census districts by size of holding and area of improved land. Information was gathered by census districts on the condition of land and the area, production, value and sales of crops. Enumeration was also made of farm machinery and equipment, horses, ponies, swine, sheep, goats, cattle, animal products, dogs and poultry.

Agriculture is not of first importance in Newfoundland but plays a part in the economy supplementary to fishing and logging. Less than 0.5 p.c. of the total land surface is devoted to agriculture and only 35,574 persons cultivated land compared with 39,539 in the Census of 1935.

The following statement gives final figures on agriculture in Newfoundland and the Coast of Labrador.

#### TENURE AND UTILIZATION OF CULTIVATED LAND IN NEWFOUNDLAND, CENSUS OF AGRICULTURE, 1945

<i>Size of Holdings—</i>	<i>No.</i>	<i>Utilization of Occupied Land—</i>	<i>acres</i>
Under 1 acre.....	15,909	Improved.....	62,642
1-4 acres.....	14,523	Grain.....	186

11-50 ".....	1,700	Potatoes.....	12,149
Over 50 ".....	336	Turnips.....	1,616
Total Holdings.....	35,574	Cabbage.....	1,548
		Other vegetables.....	216
		Fruit.....	63
<i>Number of Holdings by Area of</i>		Unimproved.....	74,633
<i>Improved Land—</i>		Pasture.....	14,280
Less than 1 acre.....	17,379	Woodland.....	60,353
1-4 acres.....	15,489	TOTAL AREA OF OCCUPIED LAND.....	137,275
5-10 ".....	2,201		
11-50 ".....	498		
Over 50 ".....	7		

#### NUMBER AND VALUE OF LIVE STOCK AND POULTRY IN NEWFOUNDLAND, CENSUS OF AGRICULTURE, 1945

	<i>No.</i>		<i>No.</i>
Horses.....	9,795	Cattle.....	22,944
Ponies.....	4,954		
Swine.....	11,443	TOTAL, LIVE STOCK...	146,533
Sheep.....	85,802	Hens and chickens.....	346,428
Goats.....	11,595		
TOTAL VALUE, LIVE STOCK AND POULTRY...\$8,359,753			

**Quantity and Value of Farm Products.**—Estimates were made at the time of the 1945 Census enumeration of the production and values of crops, live stock and animal products in 1944 calculated on average prices prevailing in 1945. The total value of 54,450 tons of hay, produced in 1944, was \$2,613,600, of 1,509,994 bu. of potatoes, \$2,113,992 and of 279,279 bu. of turnips and other root crops \$429,778 while 3,874 bu. of oats, wheat and barley harvested were valued at \$5,812. There were on farms, in 1944, 22,944 cattle valued at \$2,431,350, and 85,802 sheep at \$2,288,307. The estimated value of the 3,877,818 gal. of milk produced during the year, including goats' milk, was \$3,296,143 and the value of 456,926 lb. of butter produced, excluding that made by manufacturers, was \$251,309. Egg production amounted to 1,574,401 doz. valued at \$1,495,681.

### Subsection 13.—Agricultural Irrigation

A short article is given at pp. 375-379 of the 1947 Year Book on agricultural irrigation on the Canadian Prairies from its beginnings when early ranchers undertook to grow winter feed by diverting water from the smaller streams to irrigate meadow lands, to the new phase in irrigation development whereby the Federal Government, under the Prairie Farm Rehabilitation Act, 1935, undertook to construct large irrigation works on the Prairies and to provide assistance for individual projects, conduct surveys and prepare plans for various irrigation possibilities.

**Irrigation in the Prairie Provinces.**—Table 44 shows the larger irrigation developments in Alberta\*. In addition there are some 650 private individual projects authorized to irrigate an area of 75,370 acres. Table 45 shows the principal Prairie Farm Rehabilitation Act irrigation projects in Manitoba and Saskatchewan and Table 46 the irrigable and irrigated areas in British Columbia under the control of public and private organizations.

\* Prepared by B. Russell, Director of Water Resources, Department of Water Resources, Alberta.

**Irrigation in British Columbia.\***—The first right to the use of water for agricultural purposes in this Province was granted three months after the passing of an Act by the Imperial Government establishing the Crown Colony of British Columbia, in 1858.

Irrigation was used in these early years mainly for raising hay in valley bottom lands where it was easy to divert water out of the streams. By the end of the century, water was being conveyed to the benches and higher lands, especially where the climate and the benchlands were suitable for commercial fruit growing.

Companies were formed; large holdings were purchased and subdivided; and irrigation systems to supply them with water were constructed, largely with earth ditches and wooden flumes. Most of these irrigation systems have since been taken over and are operated by improvement districts, under the Water Act, or by municipalities. To-day, the large irrigation systems of the Province are good examples of hydraulic structures. Owing to the generally rugged topography, irrigation engineering has been faced in this Province with many difficult problems; agricultural development having of necessity to follow the rather narrow valleys does not lend itself to simple and cheap irrigation systems.

Due to the wide variations in climate and soil types found throughout the Province, three methods of irrigation are in use: (1) sprinkling, practised in fairly humid areas, where precipitation is moderate but insufficient during the growing

\* Prepared by J. E. Lane, Deputy Comptroller of Water Rights, Department of Lands and Forests, Victoria, B.C.

period; (2) delivery by ditch or flume, with distribution over the ground by furrows, used in general for fruit and vegetable crops; and (3) irrigation by flooding, common on hay meadows in stock-raising areas.

Most of the irrigation is by gravity supply, but pumping from lakes and rivers is also practised. Pumping is costly and only warrantable in favoured areas for the growth of high-priced specialty crops.

Estimates of irrigable and irrigated land are given in Table 46. About 85,000 acres are under water licence and capable of being irrigated; nearly 100,000 acres are irrigated by individual effort, the majority being hay and grain for stock-ranches and for field crops. In addition about 200,000 acres more could be brought under irrigation, but at a cost greater than that of existing works.

## Subsection 14.—International Agricultural Statistics

The following tables are based on statistics published by the Office of Foreign Agricultural Relations, United States Department of Agriculture, and give, by leading countries of the world, the acreages and production of wheat for the harvests of 1947 and 1948, oats, barley and corn for 1948, with averages for the years 1935-39.

North America was the world's leading producer of wheat, in both 1947 and 1948, with about 30 p.c. and 27 p.c., respectively, of the total world production. The United States alone produced nearly 24 p.c. of the total in 1947 and 20 p.c. in 1948. Although a large exporter of wheat, Canada produced only 5.9 p.c. and 6.1 p.c. of the world's total in the same two years.

In 1948 the Union of Soviet Socialist Republics was the second largest producing country with 16 p.c. of total world production. China, which held first place in Asia, was third in world production of wheat in the same year with 14 p.c. of total production.

Acreages sown to wheat in 1948 showed a slight increase of 4 p.c. over those of the previous year and total production increased by 625,500,000 bu.

The North American Continent also led in world production of oats and corn in 1948 with the United States producing 35 p.c. of total oats and 61 p.c. of corn. Asia was the leading continent for world barley production with 26 p.c. of the total, China contributing 14 p.c. The Union of Soviet Socialist Republics and the United States followed closely with 13.4 p.c. and 13.2 p.c., respectively.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic Ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic and soil conditions cause marked differences in the character of the forests in different parts of the country, whereby more or less well-defined forest regions may be recognized.

### Section 1.—Forest Regions

At pp. 184-188 of the 1941 edition of the Year Book the forest regions of Canada are separately described, together with the dominant and associated tree species common to each.

### Section 2.—Important Tree Species

In Canada there are more than 170 tree species of which 35 are conifers, commonly called "softwoods". While the number of deciduous or "hardwood" species is large, only about a dozen of these are of much commercial importance in the lumber trade, and about 80 p.c. of the volume of merchantable timber is made up of softwoods.

A short description of the individual tree species is given at pp. 384-387 of the 1947 Year Book. For more detailed information on Canadian trees refer to the Dominion Forest Service Bulletin No. 61, *Native Trees of Canada*,† published by the Department of Mines and Resources.

### Section 3.—Forest Resources

The forested area of Canada (exclusive of Newfoundland) is estimated at 1,290,960 sq. miles, or 37 p.c. of the total land area. In comparison, only 16 p.c. of the land area is considered to be of present or potential value for agriculture, and only 7 p.c. is now classed as "improved and pasture". The forested area within the boundaries of the nine provinces totals 1,167,960 sq. miles, or 58 p.c. of the provincial land area. About 478,000 sq. miles of the existing forests are classed as "unproductive". These unproductive forests are made up of small trees which cannot be expected to reach merchantable size because they are growing on poorly

\* Sections of this Chapter that deal with forestry and forest administration have been prepared by the Economics Division, Dominion Forest Service, Department of Mines and Resources. Sections dealing with forest utilization and forest industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† Obtainable from the King's Printer, Ottawa. Price \$1.50.

drained lands, or at high altitudes, or are subject to other adverse site conditions. They perform valuable functions, however. They help to protect watersheds and conserve water supplies; they provide fuel and building materials to natives and travellers in remote areas; and they are the habitat of valuable fur-bearing and game animals.

The productive forests covering more than 813,000 sq. miles are considered capable of producing continuous crops of timber suitable for domestic and industrial purposes. A considerable proportion of these forests is not yet accessible for commercial operations, but constitutes a valuable reserve for the future. About 435,000 sq. miles of productive forests are considered to be economically accessible at the present time. One-half of the productive forest area bears trees large enough for use as sawlogs, pulpwood or fuelwood, and the other half is occupied by young growth of various ages, kinds and degrees of stocking.

### CLASSIFIED FORESTED LANDS

NOT INCLUDING NEWFOUNDLAND WHERE DATA ARE NOT YET AVAILABLE

#### TOTAL FORESTED AND NON-FORESTED LANDS

MILES

#### ALIENATED AND UNALIENATED FOREST LANDS, BY PROVINCES

Forest Lands in P.E.I. amount to only 610 sq. miles, 608 of which is alienated

The total stand of timber of merchantable size is estimated to be 311,201,000,000 cu. ft., of which 191,347,000,000 cu. ft. is accessible. These cubic volumes are volumes of wood that can actually be used. Expressed in commercial terms, the accessible timber is made up of 250,250,000,000 bd. ft. of logs in trees large enough to produce sawlogs and 1,684,710,000 cords of smaller material suitable for pulpwood, fuelwood, posts, mining timbers, etc.

**Resources of Newfoundland.**—The entrance of Newfoundland into Confederation on Mar. 31, 1949, resulted in an appreciable increase to Canada's forested area. It is estimated that more than 16,000 sq. miles of the Island of Newfoundland is covered with forest, of which approximately 76 p.c. is privately owned. In Labrador, an area of about 112,000 sq. miles, no estimate of the forest resources is as yet available. Some of the forests have been leased, but the greater part of these are still controlled by the Crown.

The establishment of two large pulp and paper mills in recent years has emphasized the increasing importance of Newfoundland's forests as a source of income. Total forest production in 1946 was 121,819,000 cu. ft., which included 62,000,000 ft. b.m. of sawn lumber. Newsprint production in 1948 was 382,248 tons, of which 98 p.c. was exported.

The Province of Newfoundland, like the other provinces, administers its own resources. The Dominion Forest Service, on the invitation of the Newfoundland Provincial Government, has already delegated officers to advise on matters pertaining to the protection and development of Newfoundland's forests. This involves an up-to-date inventory of the forest resources, the protection of the forests from fire, and the organization of a program of economic and silvicultural research aiming towards an adequate and continuous supply of forest products.

## Section 4.—Forest Depletion and Increment

The purpose of this Section is to present a general account of depletion and increment. Details of the scientific control of those influences that account for wastage, viz., forest fires and insect pests, are dealt with in the section on Forest Administration at pp. 465-466 and 469. A special article on Noxious Forest Insects and Their Control appears at pp. 389-400 of the 1947 Year Book.

**Depletion.**—The average annual rate of depletion of reserves of merchantable timber during the ten years 1937-46, by cause, is given in Table 2. Of the total depletion, 76 p.c. was utilized and 24 p.c. was destroyed by fire, insects and disease. The utilization of 2,510,556,000 cu. ft. comprised 38 p.c. as logs and bolts, 29 p.c. as pulpwood, 29 p.c. as fuelwood, and the remaining 4 p.c. as miscellaneous products. Approximately 7 p.c. of the utilization was exported in unmanufactured form.

One factor that indirectly affects forest depletion is the more efficient utilization of timber that has been cut. There is little doubt that in the past too high a percentage of the sawn logs has been discarded. Changes of great significance are taking place in the uses of wood that permit of the utilization of sizes and qualities that are unmerchantable as sawn lumber. The development of the cellulose industry in the manufacture of rayon, cellophane and numerous other products, is rapidly extending the use of wood. Plastic-wood products, fibre board and laminated wood will undoubtedly provide an increasing demand for the so-called inferior classes of wood so that more complete utilization of the forest resources through the elimination of much of the waste that now occurs can be expected. (See Sect. 6, Forest Utilization, pp. 470-479.)

2.—Average Annual Forest Depletion During the Period 1937-46

Item	Usable Wood	Percentages of—

<b>Annual Depletion.....</b>	<b>3,303,139</b>	<b>...</b>	<b>100.0</b>

**Increment.**—Practically all the depletion or drain on the forest is concentrated in the 435,000 sq. miles of productive forest classed as accessible, and replacement of normal depletion by this area alone requires an average annual growth rate of about 12 cu. ft. per acre. Complete estimates of the rates at which

the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions, and the complex character of the forests themselves, place great difficulties in the way of estimating growth. Numerous studies have been made by the Dominion Forest Service which indicate, beyond reasonable doubt, that over considerable tracts annual growth exceeds 25, 30 or even 40 cu. ft. per acre per annum; however, there are other areas classed as productive on which the growth is much less.

Natural reproduction of forest tree species in Canada is fortunately prolific except in a few localities. After an area has been cutover or burned, young growth usually appears within a short time. Thus the re-establishment of some sort of forest growth is a less difficult problem than it is in many other countries. There is, however, no guarantee that the species reproduced will be of the kinds desired by industry. Most of the wood used in Canada is softwood and, in general, softwood reproduction is fairly good; but there are considerable areas in which a combination of overcutting and repeated fires have resulted, not in the permanent destruction of the forest, but in the replacement of valuable stands by new ones of inferior type.

Many stands of 'second growth' that have come up after cutting or fire are now reaching merchantable size and are beginning to attract attention. Anticipating the need for practical guidance in the management of these accessible young forests, the Dominion Forest Service is devoting the major efforts of various forest experiment stations to the improvement of the quality and the acceleration of the growth of young stands that nature has established. Operators, too, are showing more interest in putting their operations on a self-sustaining basis and working plans are being developed with this in view.

There is no room for doubt that the introduction of better methods of forest management, including the provision of more adequate forest protection, can make the forests of Canada more productive than they have ever been. It is true that stocks of very large trees, whose growth required upwards of 300 years, are disappearing and will not be replaced; but, though the forest industries of the future must use smaller logs than did those of the past, good forest management can make possible a considerable expansion of those industries when market conditions warrant.

The potential capacity of many forest soils to produce more usable wood in a given period than they have ever done in the past is already being demonstrated on such areas as the Dominion Forest Experiment Station at Petawawa, Ont., and on some of the better-managed farm woodlots.

## **Section 5.—Forest Administration**

### **Subsection 1.—Administration of Federal and Provincial Timber-Lands**

The forest resources of Canada as a whole are owned and administered by the provinces. The Federal Government, however, is responsible for the administration of those of the National Parks, Forest Experiment Stations, and Yukon and the Northwest Territories.

The general policy of the Federal Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system, the State retains ownership of the land and control of cutting operations. Revenue is received in the form of Crown dues or stumpage (either in lump sums or in payments made as the timber is cut); ground rents and fire-protection taxes are collected annually. Both ground rent and Crown dues may be adjusted at the discretion of the Governments.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 71 p.c. of the forest land is privately owned; nearly one-half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. is under private ownership. The percentages of privately owned forest land in the other provinces are as follows: Quebec, 7 p.c.; Ontario, 6 p.c.; Manitoba, 13 p.c.; Saskatchewan, 12 p.c.; Alberta, 8 p.c.; and British Columbia, 3 p.c.

### 3.—Forest Reserves in Canada, by Provinces, 1948

NOTE.—Areas of National and Provincial Parks (which are also forest reserves) are not included in this table, but may be found at pp. 22-31.

Province	Dominion Forest Experiment Stations	Provincial Forest Reserves	Total
	sq. miles	sq. miles	sq. miles

<b>Totals.....</b>	<b>202.11</b>	<b>91,653.56</b>	<b>91,855.67</b>

<sup>1</sup> Under National Park reservation and therefore not included in total.

**Forest Lands under Federal Control.**—The forests under Federal control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, and the Bureau of Northwest Territories and Yukon Affairs administers the timber in those areas. The Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

**Recent Advances in Forest Management Programs.**—During recent years an increasing interest has been shown by governments and industry alike in programs to stimulate production and at the same time perpetuate Canada's forest resources. The Ontario Forest Management Act requires timber operators on Crown Lands to submit forest inventories of their cutting areas, and to prepare management plans covering operations for a stated period (see p. 464). Continuity of tenure, which is essential to the successful operation of a sustained-yield program, is assured by an amendment to the Crown Timber Act that permits the Minister to enter into long-term timber concession agreements concerning all species of timber. The same amendment establishes a Forest Development Fund of \$2,500,000 for the building of forest roads and bridges intended for the more economical harvesting of forest products.

Saskatchewan has demonstrated the necessity for conservation of its forest resources by curtailing the annual cut to an amount approximating 5 p.c. of the estimated stand of merchantable spruce saw-timber in each particular district.

In British Columbia the granting of forest management licences under authority of the 1947 amendment to the Forest Act will, undoubtedly, lead to a great improvement in forestry practice in that Province. One company has recognized the need for long-term planning by the establishment of an experimental demonstration forest to study the problems involved in thinning, selective cutting and reforestation in stands of immature timber.

The Provinces of Nova Scotia, New Brunswick and Ontario have each appointed an Advisory Committee composed of representatives of the Provincial Government, the forest industries, and other organizations interested in the welfare of the forests, so that all forest problems might be discussed and a concerted effort made to solve them for the benefit of all.

Another aspect of forest management that is being favourably regarded is that of building up more accurate inventory records of forest resources as dealt with below.

**National Forest Inventories.**—Following the War many of the provincial forest services have been particularly active in their programs of forest inventory. The Department of Lands and Forests of Ontario has made great strides in its five-year plan of forest inventory covering a strip of country which comprises about 125,000 sq. miles of the forested lands of the Province. The plan includes the taking of air photographs with the particular purpose of building up inventory records, the preparation of a basic map, and finally the production of forest inventory maps from air photographs supported by field sampling.

The use of air photographs for forestry purposes is a comparatively new field in which progress has been made both in research and practice (see p. 468). The Dominion Forest Service has been continuing its work in the development of special techniques for the use of air photographs and, at the same time, has carried on the forest mapping of federally administered lands and other territories of direct concern to Canada. Mention may be made, for example, of the forest inventory maps which are being prepared from air photographs in the case of the Eastern Rockies Forest Conservation Area, where fire protection is of paramount importance. Data are being collected on the ground to support the interpretation of the photographs and the development of instrumental aids is being continued.

**Timber Control.**—Federal timber control established during the war years is still being maintained in 1949. Its function is to regulate the volume of exports in order to ensure that a sufficient quantity of lumber is available to take care of domestic requirements. An outline of the controls applied to meet the dislocation in the lumber industry during the war years is given at pp. 277-280 of the 1946 Year Book.

**Forestry and FAO.**—Canada has undertaken to co-operate in the forestry work of the Food and Agriculture Organization of the United Nations. The functions of the Organization as they concern forestry are outlined at pp. 264-265 of the 1946 Year Book.

**Forest Lands under Provincial Control.**—With the exception of relatively small areas owned by the Federal Government, the Crown lands and the timber on them are administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Land suitable only for forest is set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis. Information regarding forest administration in the individual provinces is given at pp. 234-236 of the 1942 Year Book.

**Royal Commissions on Forestry.**—The Provinces of British Columbia, Saskatchewan and Ontario appointed Royal Commissions to study all phases of the forestry situation in their respective provinces in 1944, 1945 and 1946. The recommendations of these Commissions are described briefly at pp. 410-411 of the 1948-49 Year Book.

Although Royal Commissions to study this problem have not been considered necessary in the other provinces, forestry problems are receiving close attention from governments and from industry, and steps are being taken to improve and strengthen administrative and protective services.

### Subsection 2.—Forest-Fire Protection

The Federal Government is responsible for fire-protection measures in the forests under its administration—chiefly those of Yukon and the Northwest Territories, the National Parks, Indian Lands, and Dominion Forest Experiment Stations. Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire-protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being distributed or covered by special taxes on timber-lands.

In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the Province of Quebec is the organization of a number of co-operative protective associations among lessees of timber-limits. These associations have their own staffs, which co-operate with those of the Board of Transport Commissioners and the Provincial Government. The latter contributes money grants, and also pays for the protection of vacant Crown lands lying within the area of the associations' activities. In the Province of Newfoundland, responsibility for the protection of most licensed timber-lands is vested in the lessees. In addition, the Newfoundland Forest Protection Association, maintained jointly by the government and industry, carries out certain important fire-control functions.

In the matter of forest-fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Transport Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed ex-officio officers of the Board of Transport Commissioners and co-operate with the fire-ranging staffs which the railway companies are required to employ under the Dominion Railway Act.

In many districts in Canada, radio-equipped aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, seaplanes or flying boats can be used for detection, and for the transportation of fire-fighters and their equipment to fires in remote areas. In Western Canada, equipment and supplies are sometimes dropped by parachute to isolated fire crews; in one province parachutists are now employed to fight fires which are difficult of access by other means.

In the more settled areas with better transportation facilities, fire detection is carried out by means of lookout towers fitted with telephone or radio for reporting fires. Field staffs and equipment are maintained at strategic points ready to deal with fires when they are reported. These staffs, when not engaged on fire control duties, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other necessary improvements.

Portable gasoline pumps, which usually weigh between 60 and 100 lb. each, and linen hose are important equipment. These pumps can be carried to a fire by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack and can provide

hose pressures up to 200 lb. per square inch, depending upon the elevation above and distance from the water supply. Hose lines over a mile in length are frequently used. Small hand-pumps supplied by 5-gallon portable containers are also used effectively in many cases. Tractors equipped with bulldozers or ploughs are commonly used for fire-line construction. In some regions, trucks, fitted with water tanks and power pumps are employed for the control of fires adjacent to roads.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush-burning, and seasons during which permits are required for setting out fires and for travel in the forests during dangerous dry periods, have been of enormous value as preventive measures. Education of the public as to the need for care with fire is, however, the basic method of reducing the large number of fires which occur each year as a result of man's negligence.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest-fire danger. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing fire danger at any given time but, by the aid of weather forecasts, to anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop. Increased attention is being devoted to the scientific planning of fire-control operations so as to achieve adequate protection at minimum cost.

The various governmental forest authorities conduct forest conservation publicity work independently and in co-operation with the Canadian Forestry Association. Since its beginning in 1900, that Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of Canada. Special efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of forests, the devastation caused by fire and the means of preventing such destruction.

**Forest-Fire Statistics.**—Records of forest-fire losses in Canada are now available for the fire seasons of both 1947 and 1948. The 1947 season was an unusually favourable one, except in the Maritime Provinces where severe drought conditions prevailed during the late summer and autumn. In 1948, on the other hand, measurable damage combined with fire-fighting cost was the second highest in 20 years, being exceeded only by that of 1941. Exceptionally dry weather over wide areas in the Great Lakes region and in Central Canada during the early summer and autumn months contributed to the bulk of the losses sustained.

Summary statistics of fire losses are given in Tables 4 and 5. It should be noted that estimates of damage to timber are based on prevailing stumpage rates only, and take no account of other potential losses to the wood-using industries. Moreover, the estimated values destroyed make no provision for damage to soil and site quality, stream-flow regulation, wild life, or recreational and similar values, none of which can be reliably appraised in terms of dollars. Damage to property, such as buildings, logs and equipment is, however, included.

More detailed statistics of forest-fire losses may be obtained from the Dominion Forest Service, Department of Mines and Resources, Ottawa.

## Subsection 3.—Scientific Forest Research

The great forestry problem is the management of Crown forests, first under provisional and later under more intensive working plans, so as to ensure a sustained yield. Forest research activities in this direction are now assuming great importance. The Dominion Forest Service of the Department of Mines and Resources operates five forest experiment stations with a total area of 227 sq. miles.\* Here investigations of the underlying principles governing the growth of forests and improvement in the rate of increment are made and practical methods of management tested.

About 1,000 technically trained foresters are employed by the Federal Government, by provincial forest services or by pulp, paper, and lumber companies. A number of foresters are actively engaged in commercial logging operations and, in addition to administrative work, these men carry on forest surveys either for the estimation of timber-stands and making of maps, or to determine natural growth and reproduction conditions and factors.

Through the use of air photographs taken largely by the Royal Canadian Air Force and base maps prepared by the mapping organizations of the Departments of Mines and Resources and National Defence, the Dominion Forest Service has taken a leading part in the development of methods for the interpretation of air photographs for forestry purposes, (see p. 464). Provincial forest services and timber holding companies are accelerating their use of air photographs. It is now possible not only to delineate the different forest types, but also to obtain from air photographs information that facilitates the preparation of quantitative timber estimates, and greatly reduces the amount of groundwork required. Aerial photographs drawn to scales suitable for mapping purposes covering upwards of 2,600,000 sq. miles are now available in the National Air Photographic Library of the Department of Mines and Resources, and about 140,000 sq. miles of forest have been mapped and classified from the photographs. Still greater use of air photographs for forestry purposes is expected in future.

Specialized work in silvicultural research and problems connected with forest utilization are carried on by the Forest Service of the Department of Mines and Resources. On the other hand, the Department of Agriculture conducts specialized research work in the fields of forest pathology and forest entomology. Details of the programs of work under each heading follow.

\* See Table 3, p. 463.

**Silvicultural Research.**—Research in the field of silviculture is centred in five Dominion Forest Experimental Stations located in New Brunswick, Quebec, Ontario, Manitoba and Alberta, but supplementary studies are conducted in other areas in co-operation with the Provincial Governments and with industry. The purpose of this work is to keep all forest lands in continuous production and to obtain the highest possible volume of timber of good quality within a shorter period of time than is permitted by the unaided operations of nature, and at a cost that is economically feasible. Problems of regeneration, methods of cutting and tree breeding—by selection and developments of superior strains for artificial propagation—are dealt with.

**Forest Products Research.**—Research in this field is carried out by Forest Products Laboratories operating at Ottawa and Vancouver, and work covers lumber seasoning, timber mechanics, timber physics, timber pathology, wood preservation, wood chemistry and wood utilization.

Pulp and paper research is carried on at the Pulp and Paper Research Institute of Canada at Montreal and is organized under a co-operative agreement among the Federal Government, the Canadian Pulp and Paper Association and McGill University. The program of work includes woodlands research and refers to investigations in the Division of Industrial and Cellulose Chemistry of McGill University.

More detailed information on forest products research may be found at pp. 994-995 of the 1940 Year Book.

**Forest Entomology.**—The study of forest insect problems in Canada is entrusted to the Forest Insect Investigations Unit of the Division of Entomology, Science Service, Department of Agriculture. Seven main laboratories are maintained and in addition four sub-laboratories and a number of temporary field stations and camps.

A more detailed analysis of the activities of the Forest Insect Investigations Unit is given in a special article entitled "Noxious Forest Insects and Their Control" which appears at pp. 389-400 of the 1947 Year Book.

**Forest Insects Control Board.**—The Forest Insects Control Board operates under the Department of Mines and Resources and is composed of ten members representing Federal and provincial governments and the pulp and paper industry. Its purpose is to secure additional funds where necessary, and to supplement the functions of the existing Federal and provincial government agencies in order to co-ordinate all efforts into one program aiming towards the solution of the forest insect problem in Canada.

**Secondary Wood and Paper-Using Industries.**—In addition to the primary forest industries, there are a number of important industries that use the primary forest product as raw material for further manufacture. These include industries that produce commodities made almost entirely of wood or wood-pulp and also those that take paper—a secondary product—as their raw material and fabricate it into still more highly processed forms.

The veneer and plywood industry has enjoyed phenomenal growth during the past decade. Production has more than trebled since 1939, and the use of plywood is expanding as its properties are becoming more widely known.

A detailed description of the wood-using, paper-using, and veneer and plywoods industries will be found at pp. 427-430 of the 1948-49 Year Book.

## Section 6.—Forest Utilization

Forest utilization is concerned with the broad group of industries that include the hewing down of timber in the forest and the transforming of it into the many utilitarian shapes and forms required by modern standards of living. Thus they provide the raw material for sawmills, pulp and paper mills and for the still wider range of secondary industries that take the products of these basic industries and convert them into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture and all the vast range of industries that use wood in any form in their processes. The Manufactures Chapter cannot do more than treat these industries in their relationship to all industry, but the purpose here is to relate them to the primary resources of the forest. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of Canada's export trade and thereby provide the exchange necessary to pay for a large share of the imports that have to be purchased from other countries, particularly the United States.

### Subsection 1.—Woods Operations

In connection with operations in the woods, it should be borne in mind that the forests not only provide the raw materials for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants, but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, that go to swell the total.

It has been estimated that operations in the woods in Canada in 1947 gave employment during the logging season amounting to 43,574,000 man days, and distributed \$340,000,000 in wages and salaries.

### 6.—Values of Woods Operations, by Products, 1942-47

Product	1942	1943	1944	1945	1946	1947

<sup>1</sup> In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the rest of Canada 200. Other factors: pulpwood 85, firewood 80, hewn railway ties 5, poles and piling 15, fence posts 1.2 and wood for distillation 80. A change in computing the converting factor was introduced in 1944-45 and is described at p. 265 of the 1946 Year Book.

### 8.—Equivalent Volumes of Solid Wood Cut and Values of Products of Woods Operations, by Provinces, 1945-47

### Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood that reported in 1947 was 6,481, as compared with 6,001 in 1946. Employees numbered 55,426 and wages and salaries amounted to \$83,360,452. The logs, bolts and other materials and supplies of the industry were valued at \$208,543,819, the gross value of production was \$402,133,298 and net value \$190,514,978.

Lumber production in Canada reached its maximum in 1947 at almost 5,877,901,000 ft. b.m. Average values were fairly uniform up to 1916, but increased rapidly from 1917 to 1920, only to decline gradually during the following years to the lowest level for the entire period, which was reached in 1932. With the exception of 1938, increases took place each year from 1933 to 1947.

#### 9.—Quantities and Values of Lumber and All Sawmill Products, by Provinces, 1946 and 1947

Province or Territory	Lumber Production				Total Values <sup>1</sup>

**Lumber Exports.**—For exports of planks, boards and square timber see Table 14, Chapter XXII.

### Subsection 3.—The Pulp and Paper Industry

The rapid development of this industry in Canada is traced briefly at p. 265 of the 1940 Year Book. Summary statistics for the combined pulp and paper industries are given at pp. 478-479 of this volume.

There are three classes of mills in the industry. These, in 1947, numbered 29 making pulp only, 27 making paper only and 59 combined pulp and paper mills.

The industry in Canada includes three forms of industrial activity, operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. Less than one-fifth of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large proportion of such exports is cut from private lands.

### 12.—Production, Consumption, Exports and Imports of Pulpwood, 1939-47

NOTE.—Figures for earlier years will be found in the corresponding tables of previous Year Books.

Year	Apparent Total Production of Pulpwood in Canada			Canadian Pulpwood Used in Canadian Pulp-Mills		Canadian Pulpwood Exported Unmanufactured		Imported Pulpwood Used in Canada	
	Quantity <sup>1</sup>	Total Value	Average Value per Cord	Quantity <sup>1</sup>	P.C. of Total Production	Quantity <sup>1</sup>	P.C. of Total Production	Quantity <sup>1</sup>	P.C. of Total Consumption

<sup>1</sup> All quantities are given in terms of rough or unpeeled wood.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills

usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are also a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. ft. of solid wood, and one cord of peeled pulpwood 95 cu. ft.

**Pulp Production.**—Of the total 1947 pulp production 72 p.c. was made in combined pulp- and paper-mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. About 59 p.c. was groundwood pulp and over 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 7,253,671 tons of pulp produced in 1947 entailed the use of 9,551,050 cords of rough pulpwood valued at \$203,738,527 and the equivalent of 117,041 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butt cores, etc.) valued at \$2,525,960. The total value of materials used in the manufacture of pulp was \$231,668,229.

Since 1913 Canada has led the world in the export of newsprint. In 1938 the quantity of newsprint exported by the principal newsprint-producing countries was 3,806,737 short tons, of which Canada contributed nearly 64 p.c.

**World Newsprint Statistics.**—During the war years world figures of newsprint production and exports were not obtainable. However, production figures for the leading producing countries have again become available from the Newsprint Association of Canada and are given for 1947 in Table 20. The 1939 figures are included for comparative purposes. Figures for post-war exports of newsprint from those countries are still unavailable.

<sup>1</sup> Slightly lower than Bureau of Statistics figures given in Table 17 because of the exclusion of certain paper not classed as newsprint by the Association.

**Statistics of the Combined Pulp and Paper Industries.\***—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are

\* See Chapter XVII and the Index for further particulars regarding the pulp and paper and paper-converting industries.

frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper-mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 115 mills in operation in 1947. The employees numbered 49,946 and their salaries and wages amounted to \$129,477,995. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total of materials and supplies used in the industry as a whole can be considered as amounting to \$295,444,332 in 1947, \$223,448,338 in 1946 and \$170,369,499 in 1945; the gross value of production as \$706,971,628 in 1947, \$527,814,916 in 1946 and \$398,804,515 in 1945; and net value of production, \$356,084,900 in 1947, \$258,164,578 in 1946 and \$180,401,885 in 1945.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. During the war years certain other industries rose temporarily to higher positions, but the pulp and paper industry has now resumed its former place. In 1947 it was first in net value of production, in gross value of production and in salaries and wages paid, and second in employment. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, generally speaking, pulp and paper are Canada's main commodities; usually greater than wheat and far greater than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.\* The United States market absorbs, annually, practically all pulpwood exports and over 80 p.c. of the pulp and the paper shipments of Canada. About one-half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

#### **Subsection 4.—The Veneer and Plywood Industries**

At pp. 427-428 of the 1948-49 Year Book a short summary is given on this subject.

#### **Subsection 5.—The Wood-Using Industries**

Information regarding these industries is given at p. 429 of the 1948-49 Year Book.

#### **Subsection 6.—The Paper-Using Industries**

A brief résumé of the paper-using industries is given at pp. 429-430 of the 1948-49 Year Book.

\* For reasons given in Section 1, Part I of Chapter XXII, gold is excluded from Canadian trade statistics.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

### Section 1.—History of the Fur Trade

A historical outline tracing the development of the fur trade is published at pp. 281-282 of the 1946 Year Book. See also list of Special Articles under Fur Trade at the front of this volume.

### Section 2.—The Fur Industry

#### Subsection 1.—Wildlife

The fur resources of Canada are among its most valuable wildlife assets. With the increase in human population and the advance of settlement, the principal trapping of fur animals has moved farther northward. Although the raising of fur-bearers on farms has undergone marked development, wildlife still produces the greater proportion of Canadian furs.

Many animals, including some of the most valuable fur-bearers, are subject to marked fluctuations in numbers during successive years. In some species, the periods of abundance and of scarcity recur with sufficient regularity to be called cycles and these cycles influence the number of pelts taken annually.

The conservation of fur-bearing animals has long been a responsibility of Federal and provincial authorities and is receiving increasing attention each year. It requires careful management of wild fur-bearers that is analogous in many ways to management of domestic animals, though the means of control are different. Scientific studies reveal much detailed information about the principal factors that cause fur-bearers to increase or to decrease and these factors are then manipulated in various ways with a view to ensuring a high, steady annual production. The principal factors are food, space, shelter, weather and enemies, including diseases, parasites and predators. At times a rising demand for furs, accompanied by higher prices, has brought about a tendency toward trapping too high a proportion of the available stock, which tendency must be met by increased restrictions. Great changes in the supply of food and shelter available to fur-bearers in large areas have resulted at times from forest fires, floods and drought but, if the damage is not too deep, skilful management practices can restore production in these areas more rapidly than was possible a few decades ago.

In northern Canada, where trappers are widely scattered over vast areas, control of the take of fur-bearers by prohibition, close seasons and enforcement of trapping regulations presents difficulties not encountered in other areas. Through

increased staffs of game officials, better education of the trappers in conservation practices, and more complete information concerning the areas involved, the effectiveness of regulations for the conservation of wildlife shows a continuous improvement.

Conditions for the production of certain fur-bearers, especially beaver and muskrat, are readily improved through rehabilitation of the marshes and water areas that constitute their homes.

All provinces and territories now have trapping regulations and individual trappers are licensed. Some provinces register trap lines, others register trapping areas. These steps provide an incentive toward conservation measures on the part of the individual trapper who, in his own interest, will protect his area against poaching and will guard against 'over-trapping' or other unwise procedures that might wipe out local populations of fur-bearers on which his livelihood depends.

### Subsection 2.—Fur Farming\*

In the early days of the fur trade, it was the practice in Canada for trappers to keep foxes alive until the fur was prime, and from this custom has arisen the modern fur-farming industry. The earliest authentic record of raising foxes in captivity comes from Prince Edward Island, where about 65 years ago a number of foxes were raised on a farm near Tignish. After 1890, a period of rising prices for furs encouraged fox-farming and the industry grew rapidly. The beauty of the fur of the silver fox and the consequent high prices realized from the sale of the pelts, caused attention to be directed chiefly to this breed, which is a colour phase of the common red fox established through selective breeding carried on by the pioneer fox farmers. While experiments were being carried on in Prince Edward Island, attempts at raising foxes in captivity were also being made in other provinces; the records show that foxes were successfully bred in Quebec in 1898, in Ontario in 1905 and in Nova Scotia in 1906. The profitableness of fur farming became widely known in 1910 when prices obtained for the first silver-fox pelts sold at auction in London, England, were published. An average of \$1,339 per pelt was received on the sale of 25, one alone bringing the sum of \$2,627. A boom followed but this collapsed in 1914 and it was some time before the industry regained stability. Fur farming is now carried on in all provinces. An experimental fox ranch is operated by the Federal Government at Summerside, P.E.I., where problems of breeding, feeding, housing and general care are studied.

Although the fox was the first fur-bearing animal to be raised in captivity, many other kinds are now being bred—mink, raccoon, skunk, marten, fisher and rabbit. Mink are the most numerous and the most valuable of such farm-raised animals. From 1920 to 1939 there was a rapid expansion of fur farming in Canada and during that period there was a marked change in the type of furs that were most acceptable to the market. Black fox was popular 25 years ago. A few years later the highest prices were being paid for quarter and half silvers and during recent years the full silver and new types have been setting the upper price limit. The development of new colour phases in foxes and mink has proved an incentive to the fur-farming industry. New-type fox such as platinum, platinum-silver, pearl-platinum and white-marked are meeting a ready market as are the new-type mink including silver-sable, platinum, silverblu, snow-white and a number of other colour phases. In recent years chinchilla farming has been increasing and an

\* Revised in the Agriculture Division, Dominion Bureau of Statistics.

association, the National Chinchilla Breeders of Canada, has been formed. Chinchillas are now registrable under Live Stock Registrations of the Federal Department of Agriculture.

The first recorded account of fox farming in Newfoundland appeared in the minutes of the Game and Inland Fisheries Board which stated that between July, 1913, and November, 1915, there were over 1,000 applications for export of live foxes and 750 permits were granted. At that time the law prohibited the export of live foxes except where they were raised in captivity. In October, 1915, there were 315 ranches with 2,600 foxes, most of which were wild animals taken from burrows in the spring. In 1947 there were six fox farms with 180 females and 80 mink farms with 2,000 females. Mink ranching began with importations from Canada in 1936. Fur farmers and exporters are licensed and it is necessary to obtain a licence to export live fur-bearing animals. Since 1936 the Newfoundland Government has conducted a fur-farm training school at St. John's where experimental work on feeding has been carried on.

### Section 3.—Statistics of Fur Production\*

**Total Fur Production Statistics.**—Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw-fur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements, based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In Prince Edward Island, the statistics are based on returns supplied directly to the Dominion Bureau of Statistics by fur traders who deal in furs produced in the Province.

<sup>1</sup> Approximate.

Ontario leads the provinces in value of fur production, accounting for 25 p.c. of the total in the 1947-48 season. The numbers of pelts taken in both Alberta and Manitoba were higher than in Ontario, but in these provinces muskrat and squirrel, which are lower-priced furs, made up the major portion of the total while in Ontario the more valuable mink, beaver and fox pelts brought the total value to a much higher level.

\* Revised in the Agriculture Division, Dominion Bureau of Statistics.

The average price of most kinds of pelts taken in 1947-48 was a little lower than in 1946-47. All types of fox pelts, with the exception of blue fox, decreased, silver fox dropping from \$17.21 per pelt to \$10.33 and new-type fox from \$28.62 to \$18.20. Standard mink was also down from \$19.61 to \$16.77 and mutation mink from \$27.48 to \$20.01. On the other hand, the average value of beaver pelts was \$29.46 in 1946-47 as compared with \$32.36 in the later year, muskrat rose from \$1.94 to \$2.67 and squirrel from 44 cents to 62 cents.

**Fur Farm Statistics.**—There was a reduction in the number of fur farms in 1947, there being 6,147 as compared with 6,797 in 1946. The decline was in fox farms though the number of mink farms increased by 5 p.c. The demand for short-haired furs continued, but that for long-haired furs was not as high as in pre-war years. Despite the decline in total number of farms the value of land and buildings used for fur animals increased 7 p.c. over the 1946 value, but the capital value of the live animals decreased 14 p.c.

## Section 4.—Marketing and Foreign Trade

The first Canadian fur auction sale was held at Montreal in 1920 and since then that city has been the leading Canadian fur mart. To-day, auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. At Regina the Saskatchewan Government maintains a Fur Marketing Service to assist the producers in that Province.

**Grading.**—In 1939 the Federal Department of Agriculture introduced the grading of furs. One of the Department's main objectives in grading is to secure uniformity so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts, and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

**Exports and Imports.**—Prior to the Second World War Canada marketed her fur pelts mainly in the United Kingdom but, since that market was practically dormant during the war years, the fur trade was carried on for the most part with the United States. A definite revival of trade with the United Kingdom was shown in 1946, 1947 and 1948.

The Canadian fur trade, both exports and imports, is chiefly in undressed furs, the value of dressed and manufactured furs going out of Canada or coming in making up a comparatively small proportion of the total. A good part of the exports consists, of course, of those furs which Canada produces in greatest abundance, mink being the most valuable, followed by beaver, muskrat and fox. On the other hand, such furs as Persian lamb, certain types of muskrat, rabbit and squirrel, opossum and raccoon, which are not produced to any extent in Canada, make up the major portion of the imports.

Total exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1945-48 in Part I, Section 3 of the Foreign Trade Chapter, Tables 13 and 14.

### Section 5.—The Fur-Processing Industry\*

The rather general term "fur processing" includes both the fur-dressing and -dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts, on a custom basis, while the latter is a manufacturing industry that actually makes up fur goods such as coats, scarves and gloves.

Separate statistics of the fur-dressing and -dyeing industry were first obtained in 1917, when 12 establishments with 512 employees reported receipts of \$1,071,805. No analysis by type of the various skins treated was obtained before 1924, when eight establishments reported a revenue of \$1,120,895, the cost of dyes, chemicals and other materials used amounted to \$162,013 and salaries and wages of \$561,233 were paid to 539 employees. Of the 3,473,909 skins treated in that year, muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c. By 1947 the number of skins treated had increased to 10,652,179, rabbit accounting for 44 p.c., muskrat for 31 p.c. and squirrel for 8 p.c. Other types of skins treated fluctuated very widely over the past quarter-century, the numbers being affected not only by climatic conditions under which trapping is carried on but also by the development of fur farming and, above all, by the vagaries of fashion. Principal statistics of the fur-dressing industry for the years 1945, 1946 and 1947 are given in Table 8.

\* Prepared in the Animal Products Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

## 8.—Principal Statistics of the Fur-Dressing Industry, 1915-47

Amount received for treatment of furs.....\$	3,740,854	5,010,539	4,530,478

Statistics for the fur-goods industry, on a comparable basis, are available from 1921, when 219 establishments reported a gross value of production of \$13,639,609, employees numbering 2,682 who received \$3,037,605 in salaries and wages. Cost of materials used in the manufacturing process totalled \$8,118,833. Principal statistics for the industry for the years 1945, 1946 and 1947 are given in Table 9.

## 9.—Principal Statistics of the Fur-Goods Industry, 1945-47

Item	1945	1946	1947
Establishments.....No.	571	593	616
Employees on Salary—			
Male.....No.	1,112	1,162	1,193

Value of products.....\$	51,032,829	57,737,516	57,541,628

Changes in living habits and standards that have taken place in the past quarter-century are reflected in the type of goods produced by the fur-goods industry. For example, in 1921 there were 31,604 ladies' fur coats and jackets produced whereas in 1947 the industry turned out 213,711 garments of this type. On the other hand there were 4,655 men's fur coats and 1,037 men's fur-lined coats manufactured in 1921 but only 2,102 such coats in 1947. In 1921 horse-drawn sleighs were still reasonably plentiful and 4,461 fur robes were produced but by 1947 production had dropped to 58.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The waters off Canada's coasts comprise some of the most important fishing grounds of the globe. Those off the Atlantic coast have been continuously exploited by many nations for more than 400 years (see p. 348 of the 1934-35 Year Book). Though Canada's oldest industry is carried on in inland waters as well as on both the Pacific and Atlantic coasts, it does not loom very large in the economic life of the nation as a whole, for only about 1 p.c. of the gross national income comes from the marketed products of the fisheries. However, the industry is of the greatest importance to many of the communities along Canada's many thousands of miles of coastline. It provides 130,000 people with full or seasonal employment either in fishing (105,000) or in fish processing (25,000). The Canadian industry ranks among the first ten fishing industries of the world, and Canada with over two-thirds of its catch being sold in foreign markets is one of the world's largest fish exporters.

## Section 1.—The Canadian Fishing Grounds\*

Canada's fishing grounds fall naturally into three main divisions: Atlantic, Pacific and Inland, each with its own special characteristics.

**Atlantic Fisheries.**—The accession of Newfoundland has given back to the Atlantic fisheries of Canada their traditional pre-eminence which was in danger of being lost to the younger fishing industry of the Pacific. The fisheries of Newfoundland, Nova Scotia, New Brunswick, Prince Edward Island and Quebec together account for more than one-half the marketed value of all Canadian fish.

The most valuable Atlantic catch is that of cod, taken by the fishermen of all the five provinces, with Newfoundland and Nova Scotia predominating. Other "groundfish", so called because they feed at the sea bottom, are often taken with the cod. They include haddock, pollock, hake, cusk, rosefish and catfish. Other inhabitants of deep waters caught by Atlantic fishermen are the flat-fish: halibut, plaice, yellowtail, witch, flounder and skate. Lobsters, which come second in value among Atlantic fishery products are mainly caught in the three Maritime Provinces but are also found in the waters of Quebec and Newfoundland. Other types of shellfish are clams and quahaugs, of which New Brunswick and Nova Scotia both produce considerable quantities, oysters (chiefly from New Brunswick and Prince Edward Island) and scallops from Nova Scotia. Mussels, winkles and

\* Revised by the Department of Fisheries, Ottawa.

crabs are marketed on a smaller scale. Of the fish species occurring in schools ("pelagic" fish) and those entering the river estuaries, the herring are the most important. Immature herring landed in southwestern New Brunswick and marketed under the name of 'sardines' are of particular value. Other pelagic fish are the ubiquitous mackerel, smelts which are caught in large numbers off New Brunswick and elsewhere, Atlantic salmon, swordfish and many others. Altogether, more than 30 different kinds of fish, shellfish and marine mammals such as seals and whales, are commercially taken by Canada's Atlantic fishermen. In addition, other marine products such as Irish moss and other sea-grasses are harvested.

There is a fairly clear distinction to be made between two branches of the Atlantic fisheries. The shore fishery, which is the more important, is carried on in waters within 12 or 15 miles of land, while the deep-sea fishery is worked on the 'banks' farther away. Individual fishermen fishing near their homes from small row-boats, sailboats, or motor-boats, produce the bulk of the landings of the shore fisheries. The Labrador Coast fishing is of a special type, being conducted mainly by Newfoundland fishermen who voyage there for the summer. Handlines, and trawl lines with individually baited hooks, are the gear chiefly used in the shore fisheries to catch such fish as cod, haddock and halibut, but in Newfoundland the greater portion of the inshore cod catch is accounted for by cod-traps. Mackerel and herring are captured with seines, trap-nets and gill-nets; lobsters are trapped in "pots"; while smelts are mostly caught in winter in box-nets and bag-nets through holes in the ice. Oysters are gathered from their beds by special rakes or tongs, scallops are landed by drags or dredges.

The traditional deep-sea fishing vessel is the schooner from 70 to 125 tons and beyond in size, nowadays propelled by an engine as well as by sails. It carries 12 to 24 fishermen who, once the fishing grounds are reached, fish in pairs from small boats called "dories", using trawl lines. A comparatively small number of steam trawlers of 250 to 300 tons and many smaller vessels called "daggers" working out of Newfoundland and Nova Scotia ports catch fish in a large bag-like net or "trawl" dragged along the bottom of the sea.

The Atlantic fisherman working, as he does, on his own or as a sharesman, living often in a small community remote from the larger markets and using not very elaborate equipment and traditional methods, has depended on the greatly fluctuating fortunes of weather, fish runs and market conditions for his livelihood. There is now a trend, encouraged by Federal and Provincial Governments and by the co-operative movement, towards improving equipment, fishing methods, and the marketing facilities of the fisheries.

A considerable proportion of the production of the Atlantic fisheries—mainly cod and related species—is traditionally salted and dried, in some places by modern methods, largely for export to the West Indies, South America and the Mediterranean countries. However, modern developments in refrigeration and transport have enabled the fisheries to dispose of an even larger part of the catch of almost all kinds of fish in the fresh or frozen state, mostly on the Canadian and United States markets. Much of this fish is sold as fresh or smoked filets, ready for cooking. A substantial proportion of some species such as lobster, sardines, mackerel, haddock and other ground fish ('chicken haddie'), and tuna are canned and a smaller quantity of Atlantic fish is pickled. Liver and other vitamin oils are extracted from some species. Fertilizer and other non-food products are also manufactured as by-products. Herring provides the bulk of the bait for hand and trawl lines.

**Pacific Fisheries.**—The fisheries of British Columbia, Canada's Pacific Coast Province, are dominated by salmon, which accounts for over one-half the total value. Herring, together with anchovies and the erratic pilchard, contribute between one-fifth and one-quarter, and halibut with other flat-fish (soles, flounders) about one-tenth of the marketed value of the British Columbia catch. Grayfish, soup-fin and other sharks are rich sources of vitamin oil and as such commercially important. Ling and black cod (not related to the true cod) are worth mentioning, and clams, crabs and oysters also provide a small source of income to fishermen. Tuna fishing, a more recent venture, holds fair promise of becoming one of the Coast's more important pursuits. A variety of other aquatic species, ranging from shrimps to whales, are among the catches of the British Columbia fishermen.

Almost all fishing in British Columbia waters is carried on within sight of land, and there are no very large fishing vessels; but even small boats, usually highly powered and equipped with modern mechanical gear, navigational aids and radio, travel long distances up and down the coast following the seasonal movements of the fish and taking advantage of open seasons in widely scattered areas.

Among the typical craft and gear used are the purse-seine boats, owned or chartered by processing companies and operated by a crew of seven or eight who receive a share of the proceeds of the catch. These boats are important in the salmon fishery and account for the bulk of the herring and pilchard catch. The purse-seine net is from 800 to 1,200 ft. in length, and is run off the boat in a circle around the fish and then drawn together under water, purse fashion.

Another important method of salmon fishing is that of using drift gill-nets which are set floating vertically in the water. Small quantities of herring and pilchard are also taken by this method and similar gear is used in the shark fishery.

Hook and line methods of fishing are found in many branches of the Pacific Coast fisheries. Trollers catch salmon and tuna. Lines set along the sea bottom are the chief halibut fishing gear and are also used to catch other ground-fish and, to some extent, sharks. Handlines are used by men fishing from small boats for ling-cod, rockfish, shark, etc. Small trawl nets, pulled along the sea bottom by power boats or druggers, bring in most of the soles and gray cod and a variety of other fish.

Mobility, modern equipment and efficient marketing facilities characterize the Pacific fisheries which show a high degree of organization both among the fishermen and among the processing companies.

The greater part of the Pacific salmon catch is canned. The product enjoys a world-wide reputation for quality and is exported to many countries. Fresh and frozen salmon, halibut and many other species, including shellfish, are supplied to Canadian and United States markets. Herring is turned largely into fish meal and oil, as are the waste materials produced in the canning and filleting of other types of fish. The extraction of vitamin oils from livers and viscera is another important and growing branch of the industry.

**Inland Fisheries.**—Apart from being a great sport-fishing area, the inland waters of Canada, which comprise more than one-half the fresh water of the globe, also support important commercial fisheries, particularly in Ontario, the Prairie Provinces and as far north as Great Slave Lake in the Northwest Territories. Quebec, New Brunswick and Yukon have commercial inland fisheries on a smaller scale.

\*The "Offshore Fishing" represents the catch by steam trawlers and vessels of 40 tons or over fishing on offshore grounds

Note: Saskatchewan, Alberta, Yukon and the Northwest Territories are not shown on this map. The value of the commercial fisheries in these areas is comparatively small. However, quantities of whitefish, pickerel, trout, pike and tullibee are marketed each year.

A great variety of fish is taken in these inland waters; whitefish, which occur in all the provinces, head the list, followed by lake-trout and pickerel or doré. Other species are sometimes of considerable local importance, e.g., saugers in Manitoba and eels in Quebec.

The Great Lakes, and the larger bodies of water in the Prairie Provinces and Great Slave Lake in the Northwest Territories are fished extensively in the summer, the fishermen using boats up to 46 ft. in length (e.g., the whitefish boats on Lake Winnipeg) as well as skiffs and canoes. Gill-nets and pound-nets are the chief gear. Production is channelled through permanent shore stations with docking, icing, cooling, grading and warehousing facilities.

Winter fishing on large and small lakes with gill-nets set through holes in the ice is carried on by teams of men many of whom are only part-time fishermen with their chief occupation in farming, lumbering or the fur industries. Accommodation for the fishermen as well as handling facilities are available at hutted camps or in the form of mobile cabooses. Dog teams, horses, cars and snowmobiles are used to haul fish and equipment.

Most of the catch is marketed fresh or frozen, with a large proportion going south across the Border.

## Section 2.—Governments and the Fisheries\*

### Subsection 1.—The Federal Government

The Federal Government has the sole legislative authority over both the coastal and inland fisheries of Canada [British North America Act 1867, sect. 91 (12)]. Under the Act laws are made for the protection and conservation of the fisheries in all the provinces. The provinces, however, have property rights in the non-tidal fisheries. The Federal and Provincial Governments, under various arrangements, have divided the administrative (but not the legislative) authority over fisheries. The Federal Government legislates for and administers the fisheries in all Canadian tidal waters, except those of Quebec. In Quebec, the Provincial Government undertakes the enforcement of federal laws in respect of both tidal and non-tidal fisheries.

In the non-tidal waters of Canada the Federal Government administers the fisheries of Yukon, the Northwest Territories, Nova Scotia, New Brunswick and Prince Edward Island. The non-tidal fisheries of the other provinces are administered by the provincial authorities which enforce, on behalf of the Federal Government, the federal laws regulating the fisheries.

**The Department of Fisheries.**—Since Confederation the federal fishery authorities by their *protective activities* have helped to conserve the great natural resources on which the Canadian fishing industry is based. In accordance with legislation, the Federal Department of Fisheries regulates the catch of many species of fish by close seasons, size limits, closed areas, gear limitations and licensing. A staff of field officers and guardians, as well as protection vessels and patrol boats, is employed to supervise the application of conservation measures.

The Department is equally concerned in counteracting developments that might decrease fish populations and in assisting actively in maintaining and developing the runs by *fish culture*. The Fish Culture Development Branch undertakes

\* Revised by the Department of Fisheries, Ottawa.

for Atlantic salmon, various species of trout, black bass and others; the collection, allotment, transfer and incubation of eggs; the feeding and raising of fry, fingerlings and older fish; their distribution; experimentation with foods and equipment; and selective breeding. This Branch also deals with river management, control of fish predators, application of research, and the encouragement and maintenance of fish life generally. It also carries out the removal of obstructions hampering the natural movement of fish, the construction of fishways to circumvent natural and artificial obstacles, modification of streams to improve spawning beds and takes steps against the pollution of rivers and streams of importance to the fishing industry.

The Department, through its *Inspection Services*, operated partly on a voluntary and partly on a compulsory basis, helps the fishing industry to maintain a high standard of quality and facilitates the marketing of fishery products by proper grading.

In continuation of a wartime scheme, the Federal Government encourages the building of certain types of 'dragers' on the Atlantic Coast by means of *subsidies* (\$165 per gross ton in 1949). It subsidizes the construction of bait-freezing and storage facilities on the East Coast to the extent of 75 p.c. of the construction cost (up to \$10,000) of the storage space provided and pays a small annual bounty to Canadian deep-sea fishermen and vessel owners. This bounty represents the interest on the amount awarded to Canada in 1871 in recognition of certain fishing privileges accorded to the United States.

The Economics and Statistics Branch undertakes *economic studies* of problems affecting the fisheries and makes its findings available to the industry and trade. It has a comprehensive program of marketing research and, in co-operation with the Department of Trade and Commerce and its Trade Commissioner Service, is undertaking work on the development and extension of export markets for Canadian fish. An investigation is also being made of the income position of fishing communities and of the factors affecting the development of the productive capacity of the fishing industry. The Branch also assists the Dominion Bureau of Statistics in expanding and improving the statistical coverage of the fisheries.

The Information and Educational Services of the Department are provided by another Branch which assists in furthering the progress of the Canadian fisheries by increasing public knowledge of, and interest in, the country's fishery resources, their administration, development, possibilities and products; it also promotes by programs of instruction of various kinds more efficient methods of operation and the greater use of Canadian fish products.

Federal Government assistance in the education of fishermen is given by payments to educational institutions that have agreed to carry out adult educational work among fishermen, particularly to prepare them for taking part in co-operative production and disposal of their products. Grants authorized for 1947-48 totalled \$80,000, of which \$46,000 were allocated to St. Francis Xavier University for the Maritime Provinces, \$24,000 to the College of Ste. Anne de la Pocatière for the Gaspé Peninsula and the north shore of the Gulf of St. Lawrence, and \$10,000 to the University of British Columbia.

**The Fisheries Research Board.**—Under the Fisheries Research Board of Canada Act, 1937 (c. 37) this Board has charge of all federal fishery research stations in Canada, the conduct and control of investigations of practical and economic problems connected with marine and freshwater fisheries, flora and fauna, and such other work as may be assigned to it by the Minister of Fisheries. The Board

consists of 15 members appointed for five-year terms by the Minister. Nine of the members are scientists from universities or other institutions engaged in research work bearing on fishery problems; four members represent the fishing industry; and two members are from the Federal Department of Fisheries. The Board's activities are financed from moneys appropriated by Parliament. It may also use funds received for its work through bequests, donations and from other sources.

The Board operates seven main scientific stations, four dealing with biological problems and three, designated as experimental stations, dealing with the technological problems of the fishing industry. The biological stations are: the Biological Station at St. John's, Newfoundland; the Atlantic Biological Station, St. Andrews, N.B.; the Central Fisheries Research Station, Winnipeg, Man.; and the Pacific Biological Station, Nanaimo, B.C. The technological stations are: the Atlantic Fisheries Experimental Station, Halifax, N.S.; the Gaspe Fisheries Experimental Station, Grand River, Que.; and the Pacific Fisheries Experimental Station, B.C.

Special investigations in the Northwest Territories are administered directly from the headquarters of the Board, and are undertaken as problems arise. An Eastern Arctic Fisheries Investigation is also being conducted in Ungava Bay and Hudson Strait.

The Executive Committee of the Board has direction and supervision of investigations which are of sufficient importance to the fisheries of Canada to be initiated by the Board or assigned to it by the Minister. This Committee is assisted by sub-executive committees, one for the Atlantic Stations, one for the Gaspe Station, and one for the Pacific Stations; also, by advisory committees, one for the Central Research Station and one for the Eastern Arctic Fisheries Investigation. Associated committees deal with special matters related to the work of the Board.

Biological studies and investigations are carried on in the interest of conservation, development and management of the fishery resources of Canada. The studies provide knowledge of the life history, growth rate, reproduction, distribution, enemies, diseases, etc., of the fishes, shellfish, and sea mammals. The close and important relationship of these studies and those of the physical-chemical and the biological aspects of oceanography undertaken in co-operation with other organizations are being steadily developed.

The Board's technological investigations in progress at the Experimental Stations are designed to increase knowledge of methods of preservation, processing and of recovery of by-products from fish and other marine organisms. These investigations include plant and product sanitation, design of processing equipment, development of artificial drying and smoking methods, freezing and storage studies, improved methods of quality control of fresh and frozen fish, bacteriology and chemistry of salt fish, and marine oil research.

**The Fisheries Prices Support Board.**—The Board was set up in July, 1947, under the Fisheries Prices Support Act of 1944. It had five members representative of fishermen, management, and government, and is assisted by advisory committees and a full-time staff. Provision was made for the appointment of a sixth member upon the entry of Newfoundland into Confederation.

The Board functions under the direction of the Minister of Fisheries. It promotes orderly adjustment in the fishing industry from wartime to peacetime conditions, endeavours to ensure adequate and stable returns for fisheries and seeks to secure a fair relationship between the returns from fisheries and those from other occupations.

To achieve its objects, the Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board, however, has no power to control prices nor has it any jurisdiction over operations in the fishing industry or fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of \$25,000,000 but only on the recommendation of the Treasury Board and the authorization of the Governor in Council. Administrative expenses are met from a parliamentary appropriation voted for this purpose.

The Board exercised its power to buy fish in 1948 and 1949. On the first occasion it assisted in the orderly reduction of the greatly expanded wartime canning activities on the East Coast by the purchase of a proportion of the pack at a cost of about \$1,250,000. Most of the fish purchased was donated for charitable and relief purposes. In the spring of 1949, the Board took over surplus stocks of frozen lake fish, valued at approximately \$285,000, from the fishermen in the Prairie Provinces. In no case does the Board sell the fish to dealers for disposal in Canada or for export at less than the total cost incurred by the Board. About two-thirds of this fish was sold for reduction to fish meal and most of the remainder as fox and mink feed.

**International Agreements.**—Many of the grounds fished by Canadians are also frequented by fishermen from other nations, particularly from the United States. This problem and others, e.g., that of the migration of fish between Canadian waters and those outside the jurisdiction of the Government of Canada, are the subject of international agreements.

Since 1933, under the *modus vivendi* which grew out of an unratified treaty of 1888, United States fishing vessels have been issued annual licences permitting entry to Canadian Atlantic ports for the purchase of bait and other supplies. (An outline of the history of this development will be found on pp. 351-353 of the 1934-35 Year Book.) Port privileges on an annual basis have also been extended on the Pacific Coast to United States halibut vessels for some years past and, more recently, to United States vessels fishing for black cod. Canadian fishing vessels have been granted similar privileges in United States ports in Alaska. The privileges granted by Canada include permission to tranship catches, buy bait, ship crews, etc.

Two international Commissions, the membership and cost of which are shared equally between Canada and the United States, have been set up on the Pacific Coast to deal with the halibut and the Fraser River sockeye salmon fisheries, respectively. Investigations carried out under the Commissions' auspices, subsequent regulation and limitation of catches and, in the case of salmon, the construction of fishways, appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another case of restoring a depleted marine resource by international agreement and action is that of the Pacific fur seals. The provisions of a quadripartite Agreement of 1911 between Canada, the United States, Russia and Japan continue to apply by virtue of a provisional Canadian-United States Agreement of 1942, although the original treaty has lapsed after being abrogated by Japan in 1941.

A step towards international action in the investigation and conservation of the fisheries in the Northwest Atlantic has been taken by the Governments of Canada, the United States and eight interested European countries that signed an International Convention for this area in February, 1949. After ratification, an International Commission and panels for specified sub-areas will be established which, on the basis of scientific investigations, may make proposals to the interested governments for joint regulation of the fisheries in the interest of optimum conservation of the stocks of fish.

A Convention, signed in April, 1946, by Canada and the United States, but not yet ratified, provides for the establishment of a Joint Commission to develop a comprehensive plan for the effective management and maintenance of the fisheries resources in the Great Lakes, connected waters, and part of the St. Lawrence River.

Canada is one of the 15 countries which are parties to the 1946 International Convention for the Regulation of Whaling which governs in some detail the conduct of whaling by fishermen of all the participating countries.

The Permanent International Council for the Exploration of the Sea, established in 1902, to which Canada sends an observer, co-ordinates oceanographic and fishery biological investigations conducted by its members in the Eastern North Atlantic, the North Sea and the Baltic Sea.

The most comprehensive of the international organizations having to do with fisheries is the Food and Agriculture Organization of the United Nations (FAO).<sup>\*</sup> In the field of fisheries, the FAO concerns itself primarily at present with the collection, analysis, interpretation, discussion and dissemination of information. This involves statistics (including statistical standards), information on fish resources, cultural and fishing methods, and technological information. The FAO Fisheries Division also organizes studies of economic conditions relating to certain fish commodities that have been suffering from chronic difficulties, assists in the organization of regional research projects, and is doing preparatory work on international commodity standards.

### Subsection 2.—The Provincial Governments

A general outline of the work undertaken by the Provincial Governments in connection with the administration of commercial and game fisheries, assistance to the industry, educational and research work, and conservation may be found at pp. 279-286 of the 1945 Year Book. The union of Newfoundland with Canada in 1949 added a new provincial administration whose work is covered in the paragraphs below. Fishery statistics prior to Union are given in Section 4 at pp. 502-504.

**The Fisheries of the Province of Newfoundland.**—Newfoundland's cod fishery is world-famous and has been the mainstay of the Island since its first permanent settlement. Apart from cod the waters of Newfoundland yield an abundant harvest of fish which are in commercial demand, notably herring, salmon and lobster. Smelts, haddock, halibut, rosefish, caplin, mackerel, turbot, squid, etc., are also plentiful. Both the whale and seal fisheries are of major economic importance. Indeed, the fisheries of the Island of Newfoundland and of the Coast of Labrador, including of course the deep-sea fishery on the widely known Newfoundland Banks, involve nearly all the varieties of fish found in the colder

<sup>\*</sup> For an account of the work of the FAO in other fields, see pp. 402-403.

waters of the Northern Hemisphere. The consistency of yield is very high, measured by the total annual catch on all parts of the coast over a long period of years. Full advantage has not yet been taken of these rich resources and there is little doubt that with intensive modern development the fisheries will become an increasing source of wealth to the Province and to Canada as a whole.

Prior to government by Commission in 1934, the governing authority of the Newfoundland fisheries was vested, subject to the Legislature, in the Minister of Marine and Fisheries, who with his Department was charged with the duty of supervising the conduct of the various fisheries and of issuing the necessary regulations.

The First World War created a temporary wave of prosperity in the fisheries of Newfoundland, but soon after the War a downward trend in value took place, so that by 1932 the industry was in an impoverished condition. In April, 1936, the Newfoundland Fisheries Board was brought into being, as a body corporate, by Act assented to by the then Governor of Newfoundland. The Board was given wide powers over the marketing of Newfoundland's fish and fishery products and, under the Commissioner for Natural Resources, was charged with the performance of most of the usual functions of a government department of fisheries. Its two prime objectives were to bring order into the chaotic conditions which confronted those engaged in the marketing of Newfoundland fish and fishery products and to study and encourage greater development of the Island's fishery resources. These objectives have been gradually attained, with consequent improvement of both the lot of the producer and the general economic position of the Island.

In accordance with the "Terms of Union of Newfoundland with Canada" in 1949 the federal fisheries services have been extended to the new Province. The Newfoundland services existing prior to Union in such fields as the protection and encouragement of the fisheries and the operation of bait services have been taken over by the federal authorities in accordance with these terms. General fisheries administration in the Province is now the responsibility of the Federal Department of Fisheries but the laws relating to export marketing of salted fish continue to be administered by the Newfoundland Fisheries Board, now operating as a Federal agency responsible to the Minister of Fisheries. Alteration or repeal of any of these laws will be conditional during the five years following Union, upon the consent of the Lieutenant-Governor of the Province of Newfoundland. Employees of the Board became employees of the Federal Department of Fisheries at Mar. 31, 1949.

A Newfoundland Fisheries Branch has been created in the Federal Department of Fisheries at Ottawa. Its Director also acts as liaison officer between the Newfoundland Fisheries Board and the Department.

### Section 3.—Fishery Statistics\*

#### Subsection 1.—Primary Production

A century ago, the commercial fishing industry of Canada was in its infancy; the estimated value of the catch in 1844 was \$125,000, but for 1947 it reached nearly a thousand times that figure, \$123,900,000, the highest ever recorded. Growth was fairly steady until the second decade of the present century, when the First World War caused a sharp rise in prices, and the value of the products of the

\* Revised in the Fisheries Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

fisheries leaped from \$36,000,000 in 1915 to \$60,000,000 in 1918. The depression of the 1930's brought about an even sharper fall in value but, during the years immediately preceding the Second World War, the industry regained stability, and the upswing of prices from 1941 onwards contributed largely to the attainment of a new high value mark in each succeeding year. The 1948 figure showed an increase of \$15,876,617, or 13 p.c., over that for 1947.

### 1.—Marketed Values of All Products of the Fisheries, 1870-1948

For some years British Columbia and Nova Scotia have held first and second places, respectively, among the provinces for marketed value of products, usually accounting together for about two-thirds of the total for Canada. In 1947, British Columbia again led with 47 p.c. of total value, followed by Nova Scotia with 21 p.c., and New Brunswick with 14 p.c.

<sup>1</sup> Includes the Northwest Territories.<sup>2</sup> Livers only were landed on the Pacific Coast.

On the basis of marketed value, salmon established itself as the leading fish as long ago as 1895; second place has been held since 1941 by cod, but in 1947, with a decline from 1946 of 28 p.c. in the quantity caught, this fish ranked third in value, and herring, with a small increase over 1946, gained second position. Lobster, which for some years prior to 1940 was second in marketed value, fell to fourth place in that year, the position it retained in 1947.

The equipment used in the commercial fisheries for the primary operations of catching, landing, handling, and storing fish, was valued in 1947 at \$58,591,000—an increase of \$11,177,779 over the 1946 figure; of this increase, \$8,489,815 was attributable to a rise in the total estimated value of craft of all types. Sea fisheries accounted for \$49,585,446, or 85 p.c. of the total investment, and employed 47,249 men—4,712 fewer than in 1946. In 1947, 18,170 men were engaged in the inland fisheries, a reduction of 3,383 from the previous year's number.

## Subsection 2.—The Fish-Processing Industry

The canneries operating in Canada in 1947 included 125 establishments reported as dealing wholly or mainly with lobster; this, although 10 fewer than in 1946, still represented more than one-half the total. Of the total value of products of the fish-processing industry, amounting to \$112,238,159 in 1947, salmon canneries accounted for 37 p.c., other canneries for 26 p.c., and fish-curing establishments for 22 p.c.

## Section 4.—Statistics of Newfoundland Fisheries Prior to Union

Statistics of the Newfoundland fisheries, as hitherto compiled, are not strictly comparable with those of Canada and for that reason as well as the fact that they cover a period prior to Union, they are shown separately in this Section. The information given below is prepared from reports of the Newfoundland Fisheries Board and from customs and census returns.

Trade statistics are covered in this Section because they are closely related to production and because the trade of Newfoundland is not discussed in the Foreign Trade Chapter. The export values are in fact the most nearly accurate indication that can be given of the relative importance of the various species in the Newfoundland fisheries, and of the developments that have taken place in production and marketing in recent years—particularly in the direction of greater diversification of species handled and products marketed.

### 9.—Production and Exports of Salted Codfish of Newfoundland, 1938-48

NOTE.—Production is shown by calendar years, but value of exports is available only on a fiscal-year basis before 1946. The exports during any fiscal year represent almost entirely fish produced in the calendar year ending within that fiscal year.

PRODUCTION		EXPORTS		
Calendar Years	Quantity	Fiscal Years <sup>1</sup>	Value	Salted Codfish as Percentage of All Fishery Exports
	cwt.		\$'000	p. c.

1947.....	1,306,960	1947-48.....	16,405	56.6
1948.....	1,052,800	1948-49.....	17,723	55.2

<sup>1</sup> Fiscal years ended June 30, 1939-41, years thereafter ended Mar. 31.

<sup>2</sup> Nine months ended

Of the total weight of salted codfish exported from Newfoundland in 1948, 45 p.c. went to Europe (47 p.c. in 1938), and 53 p.c. to Western Hemisphere countries (52 p.c. in 1938). In Europe, Italy was the largest buyer in 1948, taking 21 p.c. (17 p.c. in 1938), while Puerto Rico led the Western Hemisphere consumers with 23 p.c. in 1948 (17 p.c. in 1938).

While the value of salted codfish exports increased substantially from 1938 to 1948, the ratio of this value to the total value of all fisheries declined considerably after 1942. This trend is related to the increasingly important contribution to export values made by other products, notably fresh and frozen cod fillets, herring and lobster. Export values of the principal fishery products, other than salted codfish, are shown in Table 11.

#### 10.—Percentage Distribution of Newfoundland Exports of Salted Codfish, by Countries, 1938, 1945, 1947 and 1948

NOTE.—This table is calculated on quantities shipped; exports of wet-salted codfish have been converted to dried weight on the basis of 140 lb. of wet-salted to one quintal of dried.

<sup>1</sup> Less than \$500.

<sup>2</sup> Includes bream, cod, dogfish, halibut, herring, seal and whale oils, and bream, cod, caplin and herring meals.

Throughout its history, a very large proportion of the fishing population of Newfoundland has been concerned primarily with the salt cod-fishery; the numbers of persons engaged in the industry since 1938 are shown in Table 12.

**12.—Number of Fishermen Engaged in the Salt Cod-fishery of Newfoundland, 1938-48**

Calendar Years	Inshore Fishery	Labrador Fishery	Deep-sea Fishery	Total
	No.	No.	No.	No.
1938.....	19,164	4,128	2,130	25,422
1939.....	18,622	4,545	2,053	25,220
1940.....	17,005	4,082	1,705	22,792
1941.....	13,724	3,239	1,680	18,643
1942.....	13,955	2,868	822	17,645

1948.....	23,145	3,590	1,255	28,000

The number of persons whose occupation was described as "fisherman" in the Newfoundland Census, 1945, was 30,953. In 1935 the comparable figure was 35,018. Total persons engaged in the industry, including canning, curing and other occupations, as well as fishing, were 31,634 in 1945, and 36,947 in 1935.

Comparatively little information is available as to quantity and value of equipment employed in the Newfoundland fisheries; Table 13 gives, in broad general groupings, a summary of the figures obtained from the Censuses of 1935 and 1945. The total value of vessels, boats, rooms and gear shown in the table was \$6,680,531 in 1935 and \$12,335,461 in 1945.

A short historical outline of the development of the mineral industry in Canada is given at pp. 309-310 of the 1939 Year Book and a special article on the Development of Canada's Mineral Resources in Relation to the War Effort, so far as that development had taken place by the middle of 1940, appears at pp. 289-309 of the 1940 edition. An article on the Outlook for the Mineral Industry in Relation to the Economic Development of Canada is given at pp. 302-314 of the 1946 edition.

## THE IRON-ORE RESOURCES OF THE QUEBEC-LABRADOR REGION†

### Abstract

The iron-ore position in Canada changed radically during the last decade. There are now three well-established iron mines, two in Ontario and one in Newfoundland. A vast new ore field is under development in Labrador, the main features of which, as it stands at present, are as follows:—

- (1) A major iron-ore field has been demonstrated in the central part of the Labrador peninsula, with an initial reserve of 300,000,000 tons of high-grade ore. The general geological features indicate that a much greater tonnage will be found as surface prospecting and drilling proceed.
- (2) Operating conditions are favourable for about six months of the year. The slight overburden, good drainage and favourable hydro-electric supply will keep operating costs at a minimum.
- (3) Present agreements with the governments specify royalties and taxes that are moderate.
- (4) Railway transportation to the coast at Seven Islands has been estimated by the Labrador Mining and Exploration Company at one-half cent per ton-mile (\$1.75 per ton). Port conditions are favourable.
- (5) There will be a comparatively small market on the Atlantic coast, and a possible small market in Great Britain and Belgium. The main market is considered to be in the area centering round Pittsburgh where most of the initial 10,000,000 tons a year will have to be sold. It may be possible to ship profitably by rail to this area from the ports of Montreal and Baltimore. Construction of the St. Lawrence Deep Waterway will probably ensure a profitable market in the area now served by the Lake Superior ores.
- (6) The Labrador field is capable of augmenting the supply of Lake ores and thus prolonging the life of the natural ore mines of the Lake Superior district. It is also capable of providing a rapidly expanded supply of ore to meet an emergency—a function the Lake Superior pits have twice performed, but may not be capable of fulfilling a third time.

\* Except where otherwise noted, this Chapter has been revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† Prepared by W. M. Goodwin, Bureau of Mines, Ottawa, and published with the permission of the Director, Mines, Forests and Scientific Services Branch, Department of Mines and Resources, Ottawa.

### Background

After a long period during which Canada produced little or no iron ore, there is now in prospect an abundant supply for domestic use and a substantial surplus for export. Two iron mines in Ontario are each shipping about 1,000,000 tons annually, with prospects of greater output in the future. In the Labrador peninsula a new iron-ore field, one of the largest in the world, has been discovered and is expected to be in production within a few years. Meantime there has been added to Canadian supplies the long-established Wabana iron mines in Newfoundland.

In 1948 the Canadian iron mines together with those of Newfoundland produced 3,000,000 long tons of ore, and the furnaces used 4,000,000 tons. Most of the ore used in the furnaces was imported in order to provide the most advantageous mixture of ores, the larger part of the Canadian ore being exported. When the Labrador ore becomes available, it should be possible to provide more completely from Canadian mines the mixture of ores required by the furnaces.

### Review of Producing Canadian Iron-Ore Mines

**Steep Rock Mine.**—The Steep Rock Mine, 150 miles west of Port Arthur, Ont., was discovered ten years ago by drilling beneath the waters of Steep Rock Lake. To exploit the ore the Seine River was diverted into a new channel, the lake was pumped out and a large amount of silt overlying the ore was removed. Two deposits of hematite, "A" and "B", have been definitely proven and others are suspected on the evidence of drilling. "B" deposit has been mined by open pit since 1945, and yields about 1,000,000 tons of high-grade ore a year, much in demand in the United States because it is so easily smelted. The deposit is vertical and the ore is likely to be mined to a great depth, first from the open pit and then from an underground mine.

"A" deposit is about double the size of "B". Preparations are now being made to remove the large amount of silt in the lake bottom on top of the ore. The open pit on "A" deposit is expected to yield 2,000,000 tons of high-grade ore a year, commencing in 1951.

**Helen Mine.**—The Helen Mine, northeast of Lake Superior and 110 miles north of Sault Ste. Marie, is owned by the Algoma Steel Corporation. The ore is siderite, the carbonate of iron, which is treated by burning with coke in a sintering machine to give a porous, high-grade material much in favour with blast-furnace operators. For the latest ten years the ore has been obtained from open cuts, but an underground mine has now been developed from which an increased supply will be drawn. The annual output of sinter to the end of 1948 has been about 500,000 tons. The sinter plant is being increased to a capacity of 1,000,000 tons a year, and the mine in proportion.

There are additional deposits of siderite in this area, some owned by the Algoma Steel Corporation and others leased to a United States firm, which are capable of augmenting the output of sinter well beyond the 1,000,000 tons a year now in prospect.

**Wabana Mine.**—The steel plant at Sydney, N.S., was established 45 years ago to make use of the abundant, cheaply mined ore of the Wabana mine on Bell Island in Conception Bay, not far from St. John's, Newfoundland. The ore is hematite, in beds that outcrop on the Island and extend far out under the bay. The seam is so wide that electrically operated shovels can be used to load the broken ore into mine cars from which it goes directly into steamships.

The Wabana ore has a high phosphorus content and is not acceptable to most furnace operators on this Continent. At Sydney special means are employed to cope with the phosphorus. Wabana ore is shipped in substantial quantities to the United Kingdom and Germany, where a steel-making process is in use that removes the phosphorus and employs it as phosphate fertilizer.

The shipments in long tons from these three sources were 686,000 from Steep Rock, 535,000 from the Helen Mine and 1,704,000 from Wabana. While these three producing iron-ore mines do not yet meet fully the tonnage required by the Canadian furnaces, the present expansion of the two mines in Ontario promises to do so shortly. The chemical characteristics of the three ores are as follows:—

<i>Item</i>	<i>Steep Rock</i>	<i>Helen Sinter</i>	<i>Wabana</i>

Moisture.....	10.17	1.75	--

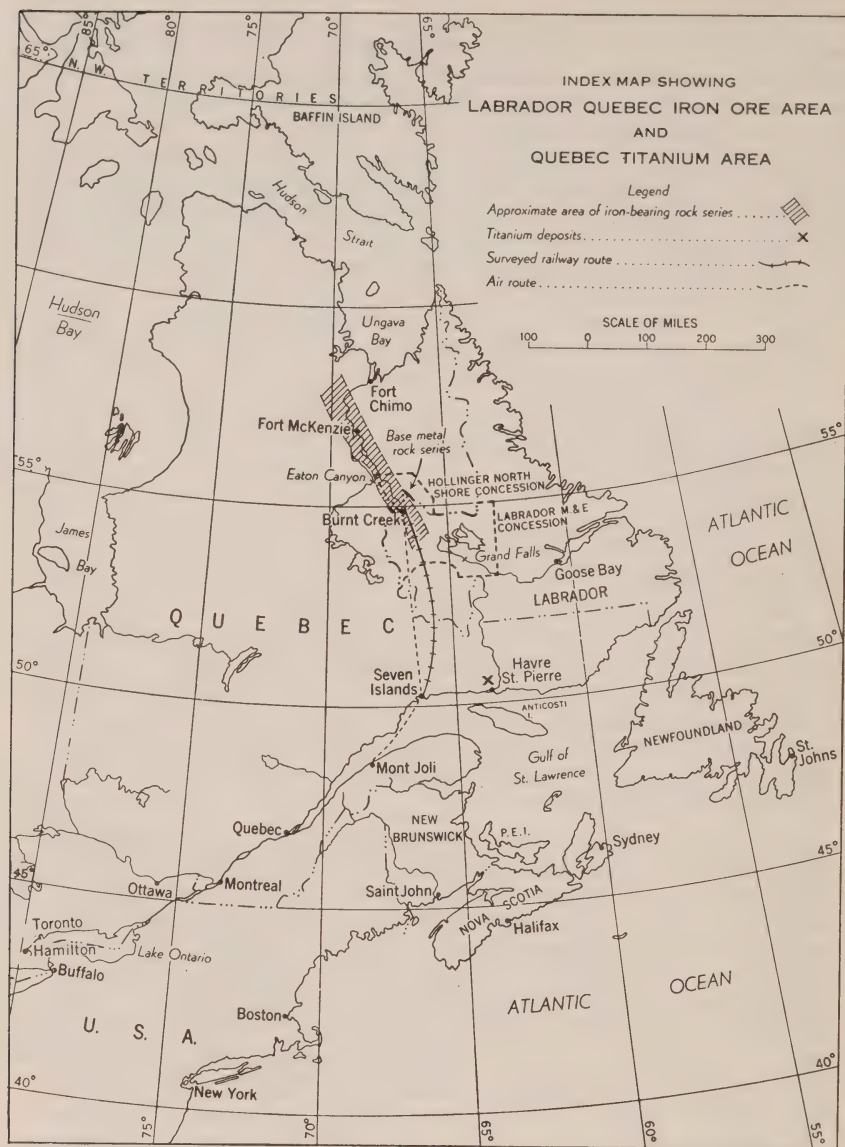

<sup>1</sup> 53 p.c. iron plus manganese.

### The Labrador Field

For more than fifty years it has been known that a belt of iron-bearing rocks traverses the interior of the Labrador peninsula in a northwest-southeast direction. A substantial part of the iron-bearing rock series consists of a rock formation similar to that of the Mesabi Range in Minnesota. This offered an attraction to prospectors but, until transportation by aircraft was available, it was virtually impossible in this remote region to conduct the detailed prospecting necessary to locate the actual deposits of ore. The first body of iron ore was found in 1929. Since then 25 commercial orebodies have been discovered and drilled.

This iron-ore region is in the central part of the Labrador peninsula (see map p. 508) astride the Labrador-Quebec boundary, and has been developed to the point where its exploitation seems feasible. The deposits are large and of good grade, and the conditions favour low-cost open-pit mining during about six months of the year. A railway location with good grades has been made and a port on the Gulf of St. Lawrence has been chosen. Consideration is being given to equipping the property for an initial output of 10,000,000 tons a year. Tests have shown that the ore is easily reducible and it has other desirable characteristics that make it comparable to the ore of the well-known Mesabi Range in Minnesota. The proven extent of the field puts it among the great iron-ore fields of the world, and its full extent is not yet known.

**Mining Concessions.**—All the orebodies discovered so far are on two mining concessions held by subsidiaries of Hollinger Consolidated Gold Mines, Limited. The M. A. Hanna Company of Cleveland has a minority interest in both subsidiaries. The concession of Labrador Mining and Exploration Company, Limited, contains 20,000 square miles. On the Quebec side of the border, the Hollinger North Shore Exploration Company, Limited, holds 3,900 square miles. The two concessions cover the iron formation for a length of 225 miles. From each of the concessions a limited area must be selected for retention within a few years.

**Occurrence of the Ore Deposits.**—The ore deposits so far drilled all lie within a length of 90 miles and a width of three miles, and have been found mainly as surface outcrops. Most of the surface is covered by a foot or two of glacial debris, so it seems likely that an intensive search will disclose additional deposits. A line of outcrops ten miles east of the drilled deposits may indicate a second, parallel range of orebodies.

The larger part of the ore drilled to the end of 1948 lies in the central part of the 90 miles on both sides of the New Quebec-Labrador boundary which in this locality is the height-of-land. The names of the principal deposits in this central part are Fleming, Ferriman, Burnt Creek, Ruth Lake and Wishart. The main camp is at Burnt Creek. The Goodwood orebody, estimated to contain 45,000,000 tons, the largest proven to date, is 25 miles northwest of Burnt Creek. The most northerly deposit, the Eclipse, containing 29,000,000 tons, is 50 miles northwest of Burnt Creek. Forty miles southeast of the camp is the Sawyer Lake deposit, one of the first to be discovered and not yet completely drilled as it lies at some distance from the projected railway line.

The occurrence of the bodies of ore within the iron formation is similar to that on the Mesabi Range in Minnesota. Recurrent parallel thrust faults bring up repeatedly the easterly dipping iron formation and have helped to create in many places the conditions favourable to the deposition of ore.

**Nature of the Ore.**—The ore deposits so far discovered are largely in ridges above the general level of the ground, with little overburden. Where the ore extends beneath the valleys or under flat ground the overburden is generally comparatively light and in no case is there evidence that water will be a serious problem. Adits have been driven into two of the deposits to give a depth of 100 feet beneath the surface. These have shown that the ore below ground has essentially the same physical characteristics as the ore at or near the surface. Thus, the numerous testpits give a reliable indication of the physical nature of the ore, and samples from drilling have determined accurately the chemical composition.

The ore varies in colour from reddish through brown to yellowish. While it is mainly in large and small lumps, with a small proportion of fines, it has not been shown as yet that it will yield any appreciable proportion of open-hearth lump ore. An exception to this is the Sawyer Lake deposit, which is hard, massive hematite of very high grade where tested, all of open-hearth lump grade.

Apart from the Sawyer Lake deposit the ore so far in sight can be loaded with shovels after it has been loosened by means of wide-spaced blast holes. The overburden is usually so light that bulldozers will serve to remove it. The ore to be removed from many of the pits lies largely above the valley level so that the cost of loading the ore cars and assembling the trains will be at a minimum.

**Proven Tonnage.**—The deposits have been examined by means of drill-holes which furnished samples for analysis. In most cases the drill-holes went through the ore and into the iron formation beneath; but in a few cases the ore proved to be deeper than it is intended to open the pits for some years to come, and drilling was stopped in ore.

Three hundred million tons of proven ore was set as an arbitrary figure to be reached before the heavy investment required to prepare the region for commercial operations would be warranted. This objective was attained and exceeded by the autumn of 1948.

**Analyses of the Ore.**—The ore is in 25 separate deposits, which vary somewhat in physical nature and will yield shipments with a considerable variety of chemical composition. Reports for 1948 give the following information:—

TONNAGE OF PROVEN ORE AT THE END OF 1948 AND DRY ANALYSES

<i>Class</i>	<i>Proven Ore</i>	<i>Dry Analyses</i>			
		<i>Fe</i>	<i>Mn</i>	<i>P</i>	<i>SiO<sub>2</sub></i>
	Long tons	p.c.	p.c.	p.c.	p.c.
<b>LABRADOR MINING AND EXPLORATION Co.—</b>					
Bessemer.....	53,572,000	60.84	0.21	0.029	10.08
Non-bessemer.....	36,884,000	58.88	0.52	0.119	7.40
Manganiferous.....	10,598,000	49.85	7.53	0.129	8.38
<b>TOTAL.....</b>	<b>101,054,000</b>				
<b>HOLLINGER NORTH SHORE EXPLORATION Co.—</b>					
Bessemer.....	132,955,000	60.63	0.33	0.028	7.98
Non-bessemer.....	62,023,000	57.13	0.58	0.108	7.80
Manganiferous.....	27,796,000	50.38	7.74	0.092	7.51
<b>TOTAL.....</b>	<b>222,774,000</b>				

As the intensive exploration has hardly begun, it is not yet possible to envisage the future of the field in any but a general way. After 50 years of mining on the Mesabi Range of Minnesota, new deposits are still being discovered beneath the deep cover glacial drift. After only three years of superficial prospecting of outcrops the Labrador field has yielded 25 mineable deposits. Plans were made to dig through the thin cover of glacial drift in favourable spots in search of additional deposits during the 1949 field season.

Besides the iron ore, outcrops of manganese ore and of lead, zinc and copper minerals have been found on the concessions. Such ores are, of course, worth a good deal more by the ton than iron ore and, if proven in mineable tonnages, they would be a very valuable addition to the new mineral region. Manganese ore, particularly, is much in demand in Canada and the United States as no appreciable quantity has been found so far on this Continent.

Of the three classes of iron ore, manganiferous iron ore is probably in greatest demand. It provides in convenient and economical form the manganese required in the resultant pig-iron. Bessemer ore, low in phosphorus, fetches a higher price than non-bessemer.

**Operating Conditions.**—In general operating conditions are good. As noted previously, by driving tunnels into the central parts of two of the orebodies the ore can be handled readily by shovels after being loosened by means of wide-spaced blast holes. The initial pits will be above valley level, thus permitting access to the pits on level tracks, avoiding pumping, and ensuring minimum cost in the ore-cars for some years to come.

The climatic conditions of this region during the shipping season are much the same as those of northern Minnesota, though its latitude is about 500 miles farther north, or about the same as Edmonton, Alta. Shipments from the mines will be confined to six months of the year on account of early and late frosts that would freeze the ore in the cars. Shipments by water from Seven Islands will be possible for a longer period as the climate at the coast is much less severe. The winter conditions are probably more severe than those in Minnesota, and constant winds cause large accumulations of drifted snow in some of the valleys but there is no

reason to believe that living conditions at the Labrador mines will be different from those in any other well-conducted mining camp in northern Canada. In all likelihood the personnel who will stay during the winter will be relatively small in number.

*Transportation.*—Access to the Labrador field has been gained, up to the present, entirely by aircraft. A subsidiary has been incorporated to operate 'Dakota' transports between the railway at Mont Joli on the south shore of the St. Lawrence and the Knob Lake Airport in the iron-ore field. Smaller aircraft are used to serve the parties of prospectors and geologists within the concessions.

All supplies and equipment, including trucks, drills and bulldozers, have been taken in by air. A winter road is being prepared to serve railway construction when it starts.

A railway location 350 miles in length has been surveyed from the port of Seven Islands to the main ore zone round Burnt Creek. Through the 100 miles of rugged ground facing the St. Lawrence the location follows the Moisie River and its tributaries. The remainder of the route is over comparatively flat country at an elevation of 1,500 to 1,800 feet and presents no special difficulties. Throughout the whole route good grades have been established, so that long trains can be hauled and the cost of haulage kept at a minimum.

The port of Seven Islands offers a good site for ore docks and storage facilities. A long period of navigation is assured and, if year-round shipment is required, it can possibly be arranged with the aid of an ice-breaker. Facilities will be provided at Seven Islands to grade the ore before putting it aboard ship and to stockpile it as required to give flexibility to rail and water shipments.

Another subsidiary company has been incorporated to hold the railway charter granted to construct the railway, port and other facilities, and to operate the system.

*Power.*—There are several potential power sites within convenient reach of the ore zone, capable of ensuring adequate low-cost power, a factor of considerable advantage. The most convenient power is at Eaton Canyon on the Kaniapiskau River, 25 miles from the Eclipse, the most northerly drilled deposit at June, 1949. This is a naturally advantageous site where a maximum of 500,000 h.p. can be developed in stages as required. A subsidiary company has been incorporated in Quebec for such power development.

Grand Falls on the Hamilton River, with a potential capacity of 1,250,000 h.p., is on the Labrador concession. This site is capable of supplying sufficient low-cost power for the operation of electric-smelting plants, should their construction be considered advisable later on for the reduction of iron and other base-metal ores.

*Royalties and Taxes.*—Agreements were made between the exploration companies and the Quebec and Newfoundland Governments specifying the royalties to be paid. The Newfoundland agreement calls for royalty payments of 5 p.c. of the net profits and the Quebec agreement for from 4 to 7 p.c. of the net profit on a sliding scale and \$100,000 annual rental. The respective Governments have agreed that taxes will be set at similarly moderate rates.

*Markets.*—While an ample supply of Labrador ores will always be held available for Canadian furnaces, the owners consider that the most important prospective market is the area now served by Lake Superior ores at and through the Great Lakes ports, largely in Pennsylvania, Indiana and Illinois. This area could be served most economically through the proposed St. Lawrence Deep Waterway—

in fact the success of the Labrador project is held to depend, to a great extent, upon construction of the Waterway. Until the Waterway is completed it may be possible to ship by rail to the eastern part of this inland area from the ports of Montreal, Que., and Baltimore, U.S.A.

On the Atlantic coast the Labrador ores should find a small market at Sydney, N.S., for admixture with the siliceous ore of Wabana, Newfoundland. Such a mixture holds promise of appreciable reduction in the cost of steel at Sydney.

There are grounds for thinking that the United Kingdom and other European countries will be interested in Labrador ore. A large tonnage of high-grade ore is imported into the United Kingdom each year to mix with British ores which are mainly low in grade. Labrador ores will be suitable for this purpose.

### TITANIUM—THE BASIS OF A NEW INDUSTRY IN QUEBEC\*

Until recent years titanium has been little known and still less used, though it is one of the more abundant elements of the earth's crust. Now it is coming into its own. Titanium dioxide, known in the trade as 'titanium white', is already firmly established as one of the leading pigments. It is used as a pigment for paints, to make paper opaque, to make rubber white, in ceramic glazes, for printing inks, in linoleum, in cosmetics, to de-lustre artificial silk, and for a variety of other purposes.

Titanium-bearing steel has recently come into use as a base for white glazes. Titanium carbide is used as the hard ingredient of the 'carbide' high-speed cutting steels, usually mixed with tungsten carbide. Titanium dioxide, made artificially or in the natural form of rutile, is commonly used as a coating for welding rods. The secret of its wide field of use in the pigment field is its inertness to chemical change which prevents discolouration, and its great covering power which is a result of its high refractive index.

While titanium white is already an important industrial product there is at present no plant in Canada making this refined dioxide of titanium. The value of annual imports into Canada of titanium white and products containing it, which come mainly from the United States, amounts to several million dollars.

Canada has, fortunately, an ample supply of ilmenite, the common titanium ore, which is composed of titanium dioxide (30 to 40 p.c.) combined with oxide of iron. The two oxides cannot be separated effectively by any mechanical means but can be recovered separately by a new metallurgical process to be established in Quebec. Ilmenite is found in three Canadian localities, all in Quebec. At Ivry, 65 miles northwest of Montreal, there are some comparatively small deposits that were mined many years ago. In St. Urbain parish, on the St. Lawrence 60 miles below Quebec, there are larger deposits from which a small annual tonnage is shipped to the United States. A very large deposit discovered in 1946 at Allard Lake (see map p. 508), 22 miles north of Havre St. Pierre and 420 miles below Quebec, is the basis of the new industry now being set up at Sorel, Que.

**The Allard Lake Deposit.**—The Allard Lake deposit, discovered by the prospectors of Kenneco Explorations (Canada) Limited, a subsidiary of Kennecott Copper Corporation, is probably the largest single deposit of the mineral known in the world to-day. Allard Lake (Quebec) Mines, Limited, another subsidiary of Kennecott Copper Corporation has been incorporated to operate the property.

\* Prepared by W. M. Goodwin, Bureau of Mines, Ottawa, and published with the permission of the Director, Mines, Forests and Scientific Services Branch, Department of Mines and Resources, Ottawa.

Drilling has shown that it contains from 150,000,000 to 200,000,000 tons of ore averaging 35 p.c. titanium dioxide and 40 p.c. iron. A large part of the ore comprises a hill and thus can be mined by quarrying, at a minimum of expense. A railway, 27 miles in length from Havre St. Pierre, is under construction and preparations for a suitable ore loading dock are under way. Shipments will be at the rate of about 3,000 tons a day during the shipping season, to supply the metallurgical plant at Sorel in its first stage of development.

The plant under construction at Sorel, on the St. Lawrence River 40 miles below Montreal, will use a new smelting process worked out by the Kennecott Copper Corporation in collaboration with the New Jersey Zinc Company. These two companies have incorporated a subsidiary, Quebec Iron and Titanium Corporation, to operate the smelter. The ilmenite will be treated in large electric furnaces in which the iron oxide will be reduced to metallic iron and separated as pig iron, and the titanium will be concentrated in the residue which carries 70 p.c. titanium dioxide.

A contract has been made with Shawinigan Water and Power Company for 150,000 h.p., to be provided from La Trenché power plant, now under construction on the St. Maurice River, with delivery of power commencing in 1951. The initial smelting plant will treat 1,500 tons of ore a day, which will produce 500 tons of iron and 700 tons of titanium dioxide concentrate. This amount of the concentrate is in proportion to the present market for refined titanium dioxide. The smelting plant at Sorel will be enlarged with the growth of the market and additional power will be drawn as required from the Beauharnois power plant and possibly from Lachine as necessity arises.

Titanium white is likely to be eclipsed in importance in due course by titanium metal. Until three years ago the metal was virtually unknown, attempts until then to reduce the metal from its ores having given impure alloys which were brittle and of no commercial use. The pure metal, it has now been discovered, has properties that are likely to give it an important place in industry. It is little over one-half the weight of iron, and is as strong as steel.

Titanium metal melts at about 1,800 degrees Centigrade, can be rolled, drawn and forged, and has a specific gravity of 4.5 (iron is 7.8). It has excellent corrosion resistance, except for certain acids, and shows no tarnish after thirty days' exposure to salt spray. The tensile strength of the annealed metal is 82,000 lb. per square inch. Cold-worked to 50 p.c. reduction, the tensile strength is 126,000 lb. per square inch.

Up to the present only a few tons of the metal are in existence, all of which is being used for experimental work. The processes by which the metal is made are still far from perfect and the cost per pound is still rather high. The analogy with other new metals such as magnesium and aluminum suggests that the cost will be reduced rapidly as the processes are improved, and that titanium will soon be a commercial metal, in common use.

Manufacture of titanium metal is under way in two pilot plants in the United States. The method is to change the refined titanium dioxide to titanium tetrachloride and to reduce the latter to titanium metal by the use of metallic magnesium. A Canadian company has evolved a method of making the metal from the oxide. The peculiar and valuable properties of the metal suggest important uses when the cost of producing it has been reduced sufficiently.

## Section 1.—Mining Laws and Government Controls

### Subsection 1.—Mining Legislation

The mineral lands of Canada, like other Crown lands, are administered by either the Federal or the Provincial Governments. The Federal Government administers the mineral lands of Yukon and the Northwest Territories as well as those within Indian Reserves and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

**Mining Laws and Regulations on Federal Lands.\***—Federal lands to which these regulations apply are those administered by the Lands and Development Services Branch, Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for federal lands, the property of the Federal Government, in these Territories reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

The Acts and regulations governing mining and quarrying on Federal lands are: *Yukon and Northwest Territories*—Coal Mining Regulations (Commercial), Coal Mining Regulations (Domestic), Petroleum and Natural Gas Regulations and Dredging Regulations; *Yukon*—Placer Mining Act (R.S.C., 1927, c. 216), Quartz Mining Act (R.S.C., 1927, c. 217); *Northwest Territories*—Quartz Mining Regulations, Placer Mining Regulations, Quarrying Regulations and regulations governing the removal of sand, stone and gravel from the beds of rivers.

Most of the regulations above mentioned have been amended recently and copies thereof and also copies of the Acts are available from the Lands and Development Services Branch of the Department of Mines and Resources, Ottawa.

**Provincial Mining Laws and Regulations.†**—The granting of land in any province, except Ontario, no longer carries with it mining rights upon or under such land. In Ontario, mineral rights are expressly reserved if they are not to be included. Some early grants in British Columbia, Manitoba, New Brunswick and Quebec also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:—

**Placer.**—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

**General Minerals.**—These are sometimes described as quartz, lode minerals or minerals in place. The most elaborate laws and regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some cases but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to ten years when a grant or lease of the mining rights

\* Revised by the Lands and Development Services Branch, Department of Mines and Resources, Ottawa.

† Compiled from material supplied by the Provincial Governments.

may be obtained, subject to agreement to develop as well as the payment of fees or an annual rental. The taxation most frequently applied is a percentage of net profits of producing mines or royalties.

*Fuels.*—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. Acts or regulations govern methods of production. In the cases of petroleum and natural gas, a permit to drill on promising ground is usually first obtained. If oil or gas is discovered the operator usually obtains a lease or grant of a limited area subject to carrying out drilling obligations and paying a rental, fees or a royalty on production. Discovery, however, is not necessarily a prerequisite to obtaining a lease. Regulations usually govern methods of production.

*Quarrying.*—Regulations under this heading define the size of holding and the terms of lease or grant.

The legislation controlling mining and minerals in each province is given at pp. 278-279 of the 1942 Year Book. Copies of the legislation and regulations and details concerning them may be obtained from the provincial authorities—given in the Directory of Sources of Official Information at the end of this volume.

### Subsection 2.—Government Controls

**Control of Non-Ferrous Metals.**—The controls established to stimulate the production of non-ferrous metals, petroleum and coal during the war years 1939-45 were, by 1945, either dissolved or remained functions of supply distribution and prices taken over by the Wartime Prices and Trade Board (see 1947 Year Book, p. 441). Surviving controls, consisting mostly of export controls, were in turn transferred from the administration of the Wartime Prices and Trade Board to the Department of Trade and Commerce in 1948 (see Chapter XXII).

**The Dominion Coal Board.\***—This Board was created in October, 1947 (11 Geo. VI, c. 57) to take over the powers, duties and functions of the Dominion Fuel Board that had systematically studied the fuel situation on behalf of the Government since 1922 (see 1947 Year Book, p. 441). The powers of the Dominion Coal Board are, however, much wider and its authority broader than those of the former Fuel Board. It has, for instance, wide emergency powers in regard to production and marketing, and administers the coal policy of the Government with the aim of securing a stable and prosperous industry with a minimum of public assistance.

Specifically the Board is charged with the responsibility of implementing the recommendations of the Royal Commission on Coal and the Act specifically states that it may undertake researches and investigations with respect to:—

- (a) the systems and methods of mining coal;
- (b) the problems and techniques of marketing and distributing coal;
- (c) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (d) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (e) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (f) the co-ordination of the activities of Government Departments relating to coal and
- (g) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of this Act.

The Board also administers, in accordance with regulations of the Governor in Council, any subventions or subsidies relating to coal voted by Parliament. (See Chapter XXI.)

\* Contributed by F. G. Neate, Executive Secretary, Dominion Coal Board, Ottawa.

Wide powers are provided to deal with production and distribution and use of fuel in case of a national fuel emergency.

## Section 2.—The Coal Reserves of Canada\*

A description of the coal deposits and coal resources of Canada appears in the 1946 Year Book, pp. 337-347. The classification of coals described and indicated on the legends of the accompanying maps in that article, is the uniform scientific classification of the coals of the North American Continent as a whole which was evolved and later adopted after almost ten years of united research by the Committee of the American Society of Testing Materials, and the Canadian Associate Committee on Coal Classification that was set up in 1928 by the National Research Council of Canada.

The adoption of this classification made possible for the first time an accurate comparison of the coal deposits of Canada with those of the United States as shown on the map of the Coal Fields in Canada and the United States that appears in the 1946 article. Prior to this investigation, coal deposits in these two countries having identical chemical and physical characteristics were being assigned to different groups and even to different classes.

The classification of coals by rank is based on the fact that different coals represent different stages in the process of metamorphism from the original vegetation through the series of peat, lignite, sub-bituminous, bituminous, and anthracite, and that each of these stages shows a different percentage of fixed carbon content and a different calorific value as calculated on the mineral-matter-free basis (ash free). The higher rank coals are classified according to the percentage of fixed carbon on a dry basis, whereas the lower rank coals, i.e., those containing less than 69 p.c. fixed carbon, are classified according to B.t.u. per pound on the moist (as mined) basis. The limits of the thirteen groups and the four main classes are indicated in the following statement.

\* Prepared by B. R. MacKay, Geologist, Geological Survey, and published by permission of the Director of the Mines, Forests and Scientific Services Branch, Department of Mines and Resources, Ottawa.

### CLASSIFICATION OF COALS BY RANK (American Society of Testing Materials designation 1937)

Class	Group	Limits of Fixed Carbon or B.t.u. Mineral-Matter- Free Basis	Requisite Physical Properties
I—Anthracite <sup>1</sup> .....	1. Meta-anthracite.... 2. Anthracite..... 3. Semi-anthracite....	Dry F.C. 98 p.c. or more. Dry F.C. 92 to 98 p.c. Dry F.C. 86 to 92 p.c.....	Non-agglomerating.
II—Bituminous <sup>2</sup> .....	1. Low Volatile..... 2. Medium Volatile.... 3. High Volatile A.... 4. High Volatile B.... 5. High Volatile C....	Dry F.C. 78 to 86 p.c. Dry F.C. 69 to 78 p.c. Dry F.C. less than 69 p.c. and moist <sup>3</sup> B.t.u. 14,000 or more. Moist <sup>3</sup> B.t.u. 13,000 to 14,000. Moist <sup>3</sup> B.t.u. 11,000 to 13,000...	Either agglomerating or non-weathering. <sup>4</sup>
III—Sub-bituminous...	1. A Coal..... 2. B Coal..... 3. C <sup>5</sup> Coal.....	Moist <sup>3</sup> B.t.u. 11,000 to 13,000... Moist <sup>3</sup> B.t.u. 9,500 to 11,000. Moist <sup>3</sup> B.t.u. 8,300 to 9,500.	Both weathering and agglomerating.
IV—Lignitic.....	1. Lignite..... 2. Brown coal.....	Moist <sup>3</sup> B.t.u. less than 8,300... Moist <sup>3</sup> B.t.u. less than 8,300...	Consolidated. Unconsolidated.

<sup>1</sup> If coal is agglomerating it is classified in the Low Volatile Bituminous group. <sup>2</sup> There may be coking and non-coking varieties in each group of bituminous coal. <sup>3</sup> Moist B.t.u. refers to coal containing its natural bed-moisture, but not including visible water on the surface of the coal. <sup>4</sup> There are three varieties of coal in the High Volatile C Bituminous group, i.e., (1) agglomerating and non-weathering, (2) agglomerating and weathering, and (3) non-agglomerating and non-weathering. <sup>5</sup> Coals having 69 p.c. or more fixed carbon on a dry mineral-matter-free basis shall be classified according to fixed carbon regardless of B.t.u.

1.—Provincial Coal Reserves, Classified by Rank, with Percentages of Total for Each Province

Rank	Nova Scotia		New Brunswick		Ontario		Manitoba		Saskatchewan	
	Amount	P.C. of Total	Amount	P.C. of Total	Amount	P.C. of Total	Amount	P.C. of Total	Amount	P.C. of Total
Probable Reserves—	'000 tons		'000 tons		'000 tons		'000 tons		'000 tons	
Low volatile bituminous including anthracite.....	2,360	0.1	—	—	—	—	—	—	—	—

Table 1 gives the most recent estimate of Canadian mineable coal reserves, based on data compiled for the Report of the Royal Commission on Coal, 1946. The method by which the estimates are arrived at is described at pp. 466-467 of the 1947 Year Book.

It will be noted that the estimated coal reserves are arranged in five different classes. The reason for this is that more than one rank of coal occurs in some of the deposits and the tonnages of some of these are so small or indefinite, due to the lack of chemical analysis, that it is difficult or impossible to separate the different ranks.

The reserves of each of these classes are calculated under the headings "Probable Reserves" and "Possible (Additional) Reserves". The Probable Reserves are those that have been calculated on considerable geological, drilling and mining development data, whereas the Possible (Additional) Reserves are those based on geological data of much more limited extent.

### Section 3.—Summary of Mineral Production

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter X while its part in the foreign trade of Canada is dealt with in Chapter XXII, Part I, especially Section 4.

#### Subsection 1.—Value and Volume of Mineral Production

**Historical Statistics.**—Definite records of the annual value of mineral production go back to 1886 only, although actual production began with the earliest settlements. The figures given in Table 2 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

2.—Value of Mineral Production, 1886-1948

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita
	\$	\$		\$	\$		\$	\$
1886.....	10,221,255	2-23	1930.....	279,873,578	27-42	1939.....	474,602,059	42-12
1890.....	16,763,353	3-51				1940.....	529,825,035	46-55
1895.....	20,505,917	4-08	1931 <sup>1</sup> .....	230,434,726	22-21	1941.....	560,241,290	48-69
1900.....	64,420,877	12-15	1932.....	191,228,225	18-19	1942.....	566,768,672	48-63

<sup>1</sup> Beginning with 1931, exchange equalization on gold production is included.  
revision.

<sup>2</sup> Subject to

**Current Production.**—Substantial improvement in the volume of production of the major metals and non-metals, and higher market prices for most of them, brought the value of Canada's mineral production in 1948 to a record total of

\$806,000,000. In several of the war years the output had cleared the \$500,000,000 mark, and in 1947 it had jumped to almost \$645,000,000, but the total for 1948 was far beyond any previous figure.

About one-half of this gain in value in 1948 was due to expansion in physical output. From the data available the tonnage of ore raised by Canadian metal mines in 1948 was from 10 to 12 p.c. greater than in the previous year. Output of gold bullion was higher by nearly 14 p.c., zinc increased 12 p.c., copper 6 p.c., lead 4 p.c., and nickel 9 p.c. Amongst the non-metallics there were even greater gains. The tonnage of coal was 16 p.c. above the 1947 figure, asbestos increased by 7 p.c., gypsum 29 p.c., cement 18 p.c. and crude petroleum 57 p.c.

The other chief factor which helped to increase the output value was the further advance in world prices for the principal base metals that constitute a very large part of Canada's mineral output. Quotations for electrolytic copper at New York rose to 23.2 cents before the year-end, and the average for 1948 was approximately 2 cents per lb. higher than in 1947. Lead reached a high of 21.5 cents, and over the year its quotations averaged 4.5 cents per lb. more than in the previous year. Electrolytic zinc rose to 17.5 cents per lb. for a gain of 2.75 cents on the yearly average, and quotations for electrolytic nickel rose to 40 cents per lb. or 5 cents more than the quotations which had prevailed for some months. Most other metals and non-metals were also quoted at higher levels than in 1947.

Each province participated in the 1948 advance in output. In Ontario the gain was 15 p.c. to \$286,000,000 and in Quebec the increase was 28 p.c. to \$147,000,000. Elsewhere in Canada the advances were as follows: British Columbia, 26 p.c. to \$147,000,000; Nova Scotia, 64 p.c. to \$56,000,000; Alberta 37 p.c. to \$93,000,000; Saskatchewan, 6 p.c. to \$34,000,000; Manitoba, 47 p.c. to \$27,000,000; New Brunswick, 26 p.c. to \$7,000,000; the Northwest Territories, 58 p.c. to \$4,300,000, and Yukon, 68 p.c. to \$3,500,000.

For the entire metals group the aggregate value in 1948 was \$484,000,000, or 22 p.c. more than in the previous year. For mineral fuels the advance in value was 44 p.c. to \$159,000,000 and for structural materials it was 17 p.c. to \$99,000,000. Other non-metallics increased 19 p.c. to \$65,000,000.

In placing a value on Canada's mineral production it has been customary to value the metals at average quotations (converted to Canadian funds) on the New York or the London markets, depending usually on the relative exports to the United Kingdom and the United States. In the war years, however, with the inauguration of price controls, it was necessary to depart from this practice, and during this period the average prices were supplied by the Canadian Metals Controller. In 1946 a weighted average was computed by applying the Canadian ceiling prices to the amounts sold for domestic use and the New York averages, in terms of Canadian dollars, to the quantities which were sold for export. A similar procedure was followed in 1947 during the period that price controls were in existence. The domestic ceiling prices on copper, lead and zinc were raised early in 1947 and ceilings were removed entirely about mid-year.

## 3.—Quantities and Values of Minerals Produced, 1945-47

Mineral	1945		1946		1947	
	Quantity	Value	Quantity	Value	Quantity	Value

<sup>1</sup> Not released for publication.<sup>2</sup> Including brucite.<sup>3</sup> Includes some talc.<sup>4</sup> Sulphur content of pyrites shipped and estimated sulphur contained in the sulphuric acid made from smelter gases.<sup>5</sup> Includes relatively large quantities used in the manufacture of chemicals.

**Analysis of Current Value and Volume.**—In order to interpret more clearly and simply the trends in mineral production in Canada over the past ten years, Table 4 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published in Tables 2 and 3.

#### 4.—Percentages of the Total Value of Mineral Production, by Principal Minerals, 1938-47

<sup>1</sup> Not released for publication.<sup>2</sup> Includes minor items not specified.

Although the year 1926 was not a normal year in mineral production to the same extent as in some other productive fields, the rapid changes that have resulted from circumstances arising since then can be seen more clearly by using 1926 as a base year. Table 5 shows the indexes of volume of mineral production by principal minerals, for the years 1938-47.

#### 5.—Indexes of Volume of Mineral Production, by Principal Minerals, 1938-47

(1926=100)

NOTE.—Indexes for 1927-37 will be found at p. 319 of the 1940 Year Book.

<sup>1</sup> Beginning with 1936, low-grade natural silica sand used as non-ferrous smelter flux is included.  
<sup>2</sup> 1928=100, previous years not being comparable.      <sup>3</sup> Excluding clay products.

### Subsection 2.—Provincial Distribution of Mineral Production

Since 1907, Ontario has been the principal mineral-producing province of Canada. In 1940, Ontario accounted for 49 p.c. of Canada's total but its share has declined steadily to 36 p.c. in 1948. In the latter year, Ontario's principal metal, in point of value, was nickel which exceeded gold; copper was next, and these three leading metals accounted for 74 p.c. of the total mineral production of the province. Higher prices for lead and zinc placed British Columbia above Quebec for the second time since 1937. A great part of Quebec's mineral production is made up of gold, copper and asbestos. Nova Scotia and Alberta are the most important coal-producing provinces. The discovery and development of the Flin Flon and Sherrit-Gordon ore bodies resulted in the Provinces of Manitoba and Saskatchewan becoming important producers of base metals, gold and silver. Alberta, besides being a big producer of coal, is the most important province for the production of petroleum and natural gas.

### 6.—Mineral Production, by Provinces, 1939-48

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book; for 1911-28 at p. 323 of the 1939 edition; and for 1929-38 at p. 323 of the 1946 edition.

## 7.—Detailed Mineral Production, by Provinces, 1947

NOTE.—Quantities and values of minerals produced during 1947 in Yukon were—gold, 47,745 fine oz., \$1,671,075; silver, 372,051 fine oz., \$267,877; lead, 1,145,256 lb., \$156,556; total \$2,095,503; and in the Northwest Territories—gold, 62,517 fine oz., \$2,188,095; silver, 45,355 fine oz., \$32,655; petroleum, 227,474 bbl., \$500,238; total \$2,720,988. Data for pitchblende and magnesium are not released for publication. For Canadian totals of individual minerals, see Table 3. The ton referred to is the short ton of 2,000 lb.

1 Includes magnesium metal.

### Subsection 3.—Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, iron, lead, nickel, those of the platinum group, silver and zinc. These metals are dealt with individually in the following paragraphs. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 3 and 7).

**Copper.**—About one-half of Canada's copper comes from the nickel-copper mines in the Sudbury district of Ontario. At Copper Cliff the International Nickel Company of Canada, Limited, produces converter copper which is further treated in the Company's refinery at that point, and at Falconbridge the Falconbridge Nickel Mines, Limited, produces nickel-copper matte which is exported to Norway for refining. Output of copper in this area in 1948 was 118,795 tons, including blister copper and the recoverable copper contained in matte or other products. In 1947 the corresponding output figure was 113,930 tons.

Mines in northern Quebec in 1948 accounted for 20 p.c. of Canada's copper production. These ores are treated at the Noranda smelter to produce copper anodes which are shipped to the Canadian Copper Refiners, Limited, at Montreal East for refining. Production of copper by operators in this district amounted to 48,331 tons in 1948 compared with 42,561 tons in 1947. Noranda, Normetal, Waite-Amulet and Amulet Dufault were the principal producing mines. The East Sullivan mill came into production in December, 1948, and construction work at the Quemont was then well advanced.

The Flin Flon-Sheritt Gordon area in northern Manitoba, and extending over the border into Saskatchewan, produced 50,882 tons of copper in 1948 compared with 48,467 tons in the previous year. Ores from the Flin Flon mine of Hudson Bay Mining and Smelting Company, Limited, and from the Sheritt-Gordon Mines, Limited, at Sherittton are treated at the Flin Flon smelter, and the blister copper which is recovered is shipped to Montreal East for refining. The Cuprus Mines commenced shipments to the Flin Flon smelter in October, 1948.

Mines in British Columbia, which account annually for about 9 p.c. of Canada's copper, produced 21,855 tons in 1948 as against 20,900 tons in 1947. The Britannia Mining and Smelting Company, Limited, and the Granby Consolidated Mining, Smelting and Power, Limited, were the major producers, with smaller contributions being made by Hedley Mascot, Kelowna and Vananda. Concentrates from these mines were exported to the United States. The Consolidated Mining and Smelting Company of Canada, Limited, exported some copper-bearing matte to the United States in 1948.

While the total tonnage of copper production in 1948 was greater than in 1947, it was lower than in any of the years from 1937 to 1944 inclusive. The record output was in 1940 at 327,797 tons. The 1948 value of output at \$107,000,000 was, of course, the greatest on record. World prices for copper were the highest since 1918, the yearly average for New York quotations, expressed in Canadian funds, being 22·35 cents compared with 20·39 cents in 1947. During the war years when record tonnages were produced, the controlled prices were from 10 to 12 cents per lb.

Output of refined copper amounted to 219,000 tons in 1948 compared with 202,500 tons in 1947. Consumption of the refined metal in Canada totalled 107,000 tons, and exports amounted to 116,169 tons. Shipments to the United Kingdom aggregated 63,494 tons for the year and to the United States 18,086 tons.

<sup>1</sup> Includes 1,269,179 lb. valued at \$128,086 produced in Nova Scotia and 42,382 lb. valued at \$4,277 produced in N.W.T. in 1939; 32,727 lb. valued at \$3,301 produced in N.W.T. in 1941; 74,963 lb. valued at \$7,561 in 1942, and 11,902 lb. valued at \$1,428 in 1944.

<sup>2</sup> Subject to revision.

**Gold.**—Gold production increased in practically every mining area in 1948 and the total of 3,495,400 fine oz. was 14 p.c. above that of the previous year. The Emergency Gold Mining Assistance Act, 1948, was of definite help to a number of marginal mines in their battle against inflated costs. The success of the industry's experiment in bringing displaced persons from Europe was of great assistance in easing the critical labour shortage. However, the industry is still operating far below its potential. The 1948 output was exceeded in each of the years from 1936 to 1943 inclusive, but it was 35 p.c. below the record of 5,345,000 fine oz. attained in 1941.

In Ontario, which accounts for almost 60 p.c. of total gold production, the output was 2,068,978 fine oz. or 6 p.c. more than in 1947. In Quebec the gain was 28 p.c. to 765,834 fine oz., in Manitoba 50 p.c. to 109,354 fine oz., in British Columbia 24 p.c. to 308,794 fine oz., and in the Northwest Territories 58 p.c. to 98,553 fine oz.

Recoveries of gold from base metal mines in 1948 amounted to 361,000 fine oz., an increase of more than 70 p.c. over the corresponding figure for 1947. Bullion from lode and placer mines increased only about 10 p.c. to 3,134,000 fine oz.

Gold is produced in Nova Scotia, at points across the Canadian Shield from Quebec to the Northwest Territories, and in the Cordilleran Region of British Columbia and Yukon. Except for comparatively small amounts obtained from alluvial workings in Yukon, British Columbia, Saskatchewan and Alberta, gold production is derived from lode mining either of auriferous quartz or of other metallic ores such as copper, nickel and zinc that carry varying amounts of gold. The principal producing districts are: western Quebec; the adjacent districts of Porcupine and Kirkland Lake in Ontario, with other smaller camps scattered across northern Ontario to the western boundary; the Rice Lake and Gods Lake areas in eastern Manitoba and the Flin Flon district on the Manitoba-Saskatchewan boundary; the Bridge River district and the Zeballos camp in British Columbia. Developments in the Yellowknife district in the Northwest Territories have resulted in several producing mines. In 1948 the three leading gold producers in Canada were the Hollinger Mine, the McIntyre in the Porcupine district and Kerr Addison mine in the Larder Lake area. About 85 p.c. of the total production came from auriferous quartz mines; about 12 p.c. from mines in which gold was associated with

ores of copper, nickel, zinc, etc.; and about 3 p.c. from alluvial operations. The auriferous quartz mining industry suffered severely from the shortage of labour and of essential supplies in the later war years; the number of producing mines decreased from 232 in 1939 to 104 in 1947 and their employees dropped from 29,001 to 22,906 during the same period.

### 9.—Quantities of Gold Produced, by Provinces, 1939-48

NOTE.—Figures for the years 1862-1910, inclusive, will be found at pp. 268-269 of the 1916-17 Year Book; for the years 1911-28 at p. 336 of the 1939 edition; and for 1929-38 at p. 332 of the 1946 edition.

<sup>1</sup> Includes value of production of the Northwest Territories amounting to \$1,876,224 in 1939; \$2,123,621 in 1940; \$2,977,359 in 1941; \$3,826,669 in 1942; \$2,272,732 in 1943; \$799,838 in 1944; \$333,218 in 1945; \$860,685 in 1946; \$2,188,095 in 1947 and \$3,449,355 in 1948. <sup>2</sup> 1948 figures subject to revision.

**Iron.**—Bog iron ore was first mined and smelted in the Province of Quebec early in the eighteenth century and from that time until 1883 the industry was carried on almost exclusively at Three Rivers. Other furnaces, using local ore, were operated at Radnor Forges and Drummondville, the last to shut down being the Drummondville furnace in 1911.

Deposits of iron ore in Canada are many and widespread, but because of the availability of low-cost, higher-grade ores in the Lake Superior ranges of the United States and the Wabana deposit in Newfoundland, no iron ore from domestic sources was produced in Canada from 1924 to 1939, inclusive.

The 1937 development work began at the New Helen mine of the Algoma Ore Properties, Limited, in the Michipicoten area of Ontario and the first sinter was produced in July, 1939. The high-grade deposits being worked by the Steep Rock Iron Mines, Limited, 135 miles west of Port Arthur, Ont., and the more recent discoveries of large deposits of iron ore in the Quebec-Labrador Boundary region have greatly raised the potentialities of Canada as a producer of iron ore. In 1948 there were 1,354,069 tons of iron-ore produced, most of which came from Ontario.

A special article on "The Iron-Ore Resources of the Quebec-Labrador Region" appears at pp. 505-512 of this volume.

### 11.—Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1939-48

NOTE.—Figures for the years 1886-1910, inclusive, will be found at p. 373 of the 1936 Year Book; for the years 1911-28 at p. 340 of the 1939 edition; and for 1929-38 at p. 333 of the 1946 edition.

Year	Iron-Ore Shipments from Canadian Mines	Production of Pig-Iron			Production of Ferro-Alloys	Production of Steel Ingots and Castings
		Nova Scotia	Ontario	Canada

<sup>1</sup> Includes production of 1,272 short tons in British Columbia.

<sup>2</sup> 1948 figures subject to revision.

**Lead.**—The output of lead in 1948 at 168,318 tons increased only 4 p.c. over the previous year. Here again the scale of mine operations was considerably below the wartime level, but advances in market prices for the metal raised the value of output to an all-time peak of \$60,700,000. At Dec. 31., 1948, the price of lead on the New York market was 21.5 cents per lb. In Canada during the war years the price ranged from 3.4 cents to 5 cents per lb.

About 97 p.c. of the Canadian output was from the province of British Columbia, and most of this in turn came from the great Sullivan mine of the Consolidated Mining and Smelting Company of Canada, Limited, at Kimberley. Smaller contributors included the Base Metals Mining Corporation, Highland Bell, Ainsmore Consolidated, Silbak Premier and Sheep Creek Zincton. Production in British Columbia for 1948 totalled 162,181 tons compared with 156,867 tons in 1947.

Recoveries by Quebec's lead producers, the New Calumet Mines, Limited, and the Golden Manitou Mines, Limited, were greater by almost 10 p.c. in 1948 at 4,485 tons. In Yukon, the output of 1,649 tons, mostly from United Keno Hill, was nearly three times that of the previous year. For values of lead produced by provinces in 1947 see Table 7, p. 524.

Output of new refined lead amounted to 160,000 tons in 1948, a slight decrease from the preceding year. All this refined metal was made at the Trail smelter of the Consolidated Mining and Smelting Company of Canada, Limited. The concentrates from Quebec's mines were exported to the United States and Belgium.

Consumption of refined lead in Canada continued at a high level. Users reported 1948 purchases at 62,000 tons, of which about 20,000 tons was for use in storage batteries, 15,000 tons for babbitts, solders, etc., 12,000 tons for covering wires and cables, 10,000 tons for pigments, and 5,000 tons for miscellaneous purposes.

Exports of refined lead during the year totalled 103,762 tons.

### 12.—Quantities and Values of Lead Produced from Canadian Ores, 1939-48

NOTE.—Figures for the years 1887-1910, inclusive, will be found at p. 367 of the 1929 Year Book; for 1911-28 at p. 341 of the 1939 edition; and for 1929-38 at p. 333 of the 1946 edition.

Year	Quantity	Value	Year	Quantity	Value
	lb.	\$		lb.	\$
1939.....	388,569,550	12,313,768	1944.....	304,582,198	13,706,199
1940.....	471,850,256	15,863,605	1945.....	346,994,472	17,349,723
1941.....	460,167,005	15,470,815	1946.....	353,973,776	23,893,230
1942.....	512,142,562	17,218,233	1947.....	323,336,687	44,200,124
1943.....	444,060,769	16,670,041	1948.....	336,636,058	60,729,144

**Nickel.**—Nickel production in 1948 totalled 128,870 tons, this being made up of refined nickel, the recoverable nickel in matte and sintered oxide exported, and the nickel in salts produced at smelters or refineries. This tonnage was 9 p.c. greater than the corresponding figure for 1947, but it was considerably below the record of 144,009 tons established in 1943.

Practically all this nickel—about 90 p.c. of the total world output, exclusive of the U.S.S.R.—comes from the Sudbury nickel-copper ores. The International Nickel Company of Canada, Limited, conducts smelting operations at Copper Cliff and Coniston, Ont., while the Falconbridge Nickel Mines, Limited, operates a smelter at its mine site a few miles east of the town of Sudbury. Matte from the former is refined at Port Colborne, Ont., or is exported to the Company's associated works in the United States and Great Britain. All the Falconbridge matte is exported to the Company's refinery in Norway. A relatively small amount of nickel oxide is recovered by the Deloro Smelting and Refining Company, Limited, Deloro, Ont., from the treatment of silver-cobalt-nickel-arsenic ores from the Cobalt district in northern Ontario. Nickel-bearing ores in the Lynn Lake area in northern Manitoba are now being developed by the Sherritt-Gordon Mines, Limited.

The value of nickel output in 1948 at \$85,600,000 was the greatest ever recorded. Early in August, 1948, the price for electrolytic nickel advanced to 40 cents per lb. at Port Colborne, from the former level of 35 cents.

The consumption of refined nickel by Canadian foundries amounts to about 2,000 tons annually.

### 13.—Quantities and Values of Nickel Produced, 1939-48

NOTE.—Figures for the years 1889-1910, inclusive, will be found at p. 368 of the 1929 Year Book; for 1911-28 at p. 342 of the 1939 edition; and for 1929-38 at p. 333 of the 1946 edition.

<sup>1</sup> 1948 figures subject to revision.

**Metals of the Platinum Group.**—This group of metals includes palladium, rhodium, ruthenium, osmium and iridium, with platinum and iridium as the most important. These metals occur in the nickel-copper ore of the Sudbury district and are recovered in the tank residues from the nickel refinery at Port Colborne, Ont. The crude residues are sent to the refinery at Acton, England, for refining. The great increase in the output of nickel-copper ores has made Canada the leading producer of platinum since 1934, when it displaced Russia. The industrial uses of the platinum metals have expanded considerably in recent years, particularly in electrical and chemical equipment, jewellery and in medical and dental appliances. Canada produced 260,400 fine oz. of platinum metals for a total value of \$16,000,000, in 1948.

#### 14.—Quantities and Values of Platinum and Palladium Produced, 1939-48

NOTE.—Records of the platinum production in Canada go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for the years 1921-38 will be found at p. 340 of the 1940 Year Book.

Year	Platinum		Palladium <sup>1</sup>		Year	Platinum		Palladium <sup>1</sup>

<sup>1</sup> Includes also rhodium, ruthenium, osmium and iridium.

<sup>2</sup> 1948 figures subject to revision.

**Silver.**—Silver, a by-product of most gold and base-metal mines, increased 25 p.c. in quantity in 1948 to 15,600,000 fine oz., including silver bullion and silver contained in concentrates exported. Production of fine silver was about 12,000,000 fine oz. in 1948 and the consumption by Canadian users, other than for coinage, was 4,500,000 fine oz.

Silver mining is not a distinct industry in Canada as the silver-bearing minerals occur in association with other metals of economic value. Most of the metal is obtained from the treatment of base-metal ores although substantial amounts are recovered from gold-quartz ores and from alluvial gold deposits. For many years the famous camp at Cobalt, Ont., supplied the bulk of Canada's silver, but output from this area has been quite small in recent years. In 1948, approximately 42 p.c. of Canada's silver came from British Columbia, 21 p.c. from Ontario, 14 p.c. from Quebec, 5 p.c. from Manitoba, 9 p.c. from Saskatchewan and 9 p.c. from Yukon and the Northwest Territories.

#### 15.—Quantities and Values of Silver Produced, 1939-48

NOTE.—Figures for the years 1887-1910, inclusive, will be found at p. 361 of the 1933 Year Book; for the years 1911-28 at p. 344 of the 1939 edition; for 1929-38 at p. 334 of the 1946 edition.

<sup>1</sup> 1948 figures subject to revision.

**Zinc.**—Zinc mines in British Columbia accounted for 58 p.c. of Canada's zinc production in 1948; the Flin Flon-Sheritt Gordon district in Manitoba and Saskatchewan contributed 22 p.c. and northern Quebec 20 p.c. Canada's output of 232,095 tons in 1948 compares with 207,863 tons in 1947 and with the record of 305,377 tons in 1943.

Production in British Columbia increased by 6 p.c. in 1948 to 134,038 tons. Most of this came from the Sullivan mine, but there were relatively small shipments from Ainsmore Consolidated, Base Metals Mining Corporation, Silbak Premier, Sheep Creek, Highland Bell, Britannia Mining and Smelting Company and Western Exploration. In Central Canada the Flin Flon and Sheritt Gordon mines produced 50,919 tons, or 10 p.c. more than in 1947, and in Quebec the mine shipments totalled 47,137 tons compared with 34,732 tons in the previous year. The Normetal, Waite-Amulet, Golden Manitou and New Calumet contributed to these latter totals, and practically all the concentrates from these properties were exported to the United States and Belgium. Some concentrates from the New Calumet Mines, Limited, were shipped to the smelter of the Consolidated Mining and Smelting Company, Limited, at Trail, B.C.

Output of refined zinc was 192,500 tons in 1948 and Canadian consumers used 46,000 tons in that year. Exports amounted to 144,887 tons, including 55,433 tons to the United Kingdom and 75,408 tons to the United States. For values of zinc production by provinces in 1947 see Table 7, p. 524.

**17.—Quantities and Values of Zinc Produced, 1939-48**

NOTE.—Figures for the years 1911-28 are given at p. 347 of the 1939 Year Book; for 1929-38 at p. 335 of the 1946 edition.

### Subsection 4.—Production of Fuels

**Coal.**—In 1948 the value of coal production was greater than that of any other mineral except gold. It was slightly above copper in this regard and far above nickel, lead, zinc or asbestos. The value of coal production in 1948 was the greatest on record and second in tonnage, amounting to 18,449,689 tons worth \$106,684,008. Of the total tonnage 44 p.c. came from Alberta's mines, 35 p.c. from Nova Scotia, 10 p.c. from British Columbia, 8 p.c. from Saskatchewan and 3 p.c. from New Brunswick. There was also a small tonnage from Yukon. About 1,273,000 tons of coal were exported in 1948 and imports totalled 31,000,000 tons.

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal and oil, output is relatively small in comparison with domestic requirements. The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development, those of Ontario and Quebec, are more easily and economically supplied with coal from the nearer United States coalfields of Pennsylvania and Ohio. The coal produced in Nova Scotia, New Brunswick, British Columbia and Yukon is all classed as bituminous, while Alberta produces bituminous and sub-bituminous, and Saskatchewan and Manitoba lignite only.

### 18.—Coal Production, by Provinces, 1939-48

NOTE.—Figures for the years 1874-1910, inclusive, will be found at p. 419 of the 1911 Year Book; for the years 1911-28 at p. 348 of the 1939 edition; and for 1929-38 at p. 347 of the 1946 edition.

Year	Nova Scotia	New Brunswick	Manitoba	Saskatchewan	Alberta	British Columbia	Yukon	Totals

1948....	6,430,991	522,136	—	1,589,172	8,123,255	1,780,334	3,801	18,449,689	106,684,008

**Coal Consumption.**—The sources of coal consumed in Canada in the calendar years 1939-48 are shown in Table 21 and detailed figures of coal made available for consumption in 1948 are given in Table 22; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

**19.—Imports<sup>1</sup> of Anthracite, Bituminous and Lignite Coal into Canada, 1939-48**

NOTE.—Anthracite dust is included under anthracite coal. Figures for the years 1868-1910, inclusive, will be found at p. 420 of the 1911 Year Book; for the years 1911-28 at p. 349 of the 1939 edition; and for 1929-38 at p. 348 of the 1946 edition.

<sup>1</sup> Coal reaching Canadian ports whether or not it is cleared from customs.  
for the months of January, February and March.

<sup>2</sup> Briquettes included  
<sup>3</sup> Lignite coal included with bituminous.

**Petroleum.**—A brief account of the development of the petroleum industry in Canada was published as a special feature in *Canada 1949*, reprints of which are available (see list at front of this edition). The development of oil production in the Northwest Territories is covered in the 1943-44 edition of the Year Book, pp. 316-317.

In 1948 Canada produced 12,098,000 bbl. of crude oil or slightly more than 12 p.c. of the amount consumed. The remainder, consisting of 77,633,000 bbl. of crude oil and 12,039,000 bbl. of petroleum products, was imported. Canadian consumption of petroleum and products is about 250 gal. per capita per year.

Canadian oil resources are very unevenly distributed. Almost all the proven reserves are in Western Canada east of the mountains. In 1948, of a total production of 12,098,000 bbl. of crude petroleum, 10,660,000 bbl., or 88 p.c., came from Alberta wells, 866,000 bbl., or 7 p.c. from Saskatchewan wells mainly from the Lloydminster field which straddles the Alberta-Saskatchewan border, and the remainder from the Northwest Territories, Ontario and New Brunswick.

## 23.—Quantities and Values of Crude Petroleum Produced, by Provinces, 1942-48

NOTE.—Figures for the years 1936-41 will be found at p. 476 of the 1948-49 edition of the Year Book.

<sup>1</sup> These figures are compiled on a somewhat different basis from the figure of the Alberta Government given on p. 538.

<sup>2</sup> 1948 figures subject to revision.

Petroleum has become of such vital importance to industry that an intense search for oil has been carried on during and since the War not only in the Prairie Provinces, where several new oil fields have been discovered, but also in Ontario, Manitoba and British Columbia.

Provincial Ministers of Mines held a conference in September, 1948, and a Continuing Interprovincial Petroleum and Natural Gas Committee was established, with representation from each of eight provinces and from the oil industry. The function of the Committee is the specialized study of all oil and natural gas matters throughout Canada.

The Alberta oil fields have been of leading importance since the discovery of the Turner Valley Field in 1914. Recent important developments of new fields near Edmonton have again emphasized the significance of this area.

*Alberta Oil Fields.\**—The 1948 oil output from Alberta fields reached the record level of 10,973,583 bbl., approximately 4,000,000 bbl. more than in the preceding year and over 837,000 bbl. more than the previous record of 1942. In 1942 the Turner Valley field produced what was for all practical purposes the whole of Canada's oil, the remainder, 132,361 bbl. being produced from nine other Alberta fields and 248,000 bbl. from wells in Ontario, New Brunswick and the Northwest Territories. In 1942 the output of the Turner Valley field began to decline and has continued to decline. The field still contributes, however, about 45 p.c. of Alberta's oil. Production from the Turner Valley amounted to 4,900,739 bbl. in 1948 and in that year six new wells were brought into production in the field.

The Leduc field, discovered in February, 1947, is replacing Turner Valley as Alberta's, and Canada's, greatest oil field. Output from that field increased from 122,297 bbl. in January, 1948, to 661,106 bbl. in December, to make the year's total of 4,657,371 bbl. This output was achieved in spite of the interruption caused by Atlantic No. 3 running 'wild' from the end of March until fire broke out and was extinguished on Sept. 6 and the well was 'killed'. On May 14 the entire field was shut down by order of the Petroleum and Natural Gas Conservation Board so that all transportation facilities might be made available for the removal of the uncontrolled flow from Atlantic No. 3, which at one time was as high as 14,000 bbl. a day. By June 5 the situation was sufficiently in hand to permit resumption of production from all wells but at reduced quotas. In October, 1949, 327 of Alberta's operating wells were in the Leduc field. In the Redwater field, 45 miles northeast of Edmonton, discovered in the autumn of 1948, there were in October, 1949, 205 operating wells giving an average of 20,000 bbl. a day. In the winter of 1948-49 an important discovery was made west of the Woodbend sector of the Leduc field.

Fourth in barrelage among the Alberta fields is Lloydminster. This area, partly in Alberta and partly in Saskatchewan, is without rival in the heavy oil field, being notable for its output of asphaltic oil. In the summer of 1949 both the Canadian National Railway and the Canadian Pacific Railway converted a considerable proportion of their coal-burning locomotives to oil burners, using fuel from this field. This field (including Lone Rock), produced 1,494,161 bbl. in 1948. Of this total 648,055 bbl. was from the Alberta portion which came into production in 1939 and now shows a production rate of 1,549,299 bbl. Of the other Alberta fields, Princess showed the greatest development during 1948.

\* Summarized from *Alberta Oil Review, 1948*, by A. C. Ballantine, Supervisor of Technical Publications, Government of Alberta. Figures in this review are compiled on a basis different from that used in the compilation of Table 23.

Exploration and development continued not only unabated but accelerated. During 1948 rotary bits drilled 1,663,687 ft. into the earth compared with 882,358 ft. in 1947 and 401,920 ft. in 1946. At the end of the year, 65 exploration parties were carrying out operations, most of them north of the North Saskatchewan River. The 1948 revenue to Alberta crude oil producers amounted to \$35,127,751 as compared with \$18,078,907 in 1947.

Early in 1949, the capacity of the Alberta refinery, estimated at 35,250 bbl. daily, was found to be insufficient to handle the average daily production of crude oil, not including natural gasoline, which was 50,673 bbl. at May 1, 1949. To remedy the situation a pipeline with a capacity of 40,000 bbl. daily is being constructed from Edmonton to the Head of the Lakes.

The following table gives production by fields in 1948.

#### 24.—Production of Alberta Oil Fields, 1948

NOTE.—Figures for total production of petroleum for 1922–46 are given at p. 473 of the 1947 Year Book and production in the different fields for 1947 at p. 477 of the 1948–49 edition.

<sup>1</sup> Three months.

*The Tar Sands and Bituminous Developments.\**—Alberta, in its bituminous sands deposit at McMurray, has the greatest known oil reserve on the face of the earth. Estimates vary between that of Canadian geologists at 100,000,000,000 tons and that of the United States Bureau of Mines at 250,000,000,000 tons. The yield at present is about one barrel of oil per ton of sands. The exposures of these oil-soaked sands occur not only downstream from McMurray to Bitumount and some five miles beyond (a distance of 60 miles altogether) but also upstream in the opposite direction and eastward along the Christina River which flows into the Clearwater River 15 miles from McMurray, and on the tributaries of the Athabaska River between McMurray and Bitumount. The whole area is approximately 60 miles long and 20 miles wide, i.e., 1,200 square miles.

A processing plant, now operated by the Alberta Government, is situated at Bitumount. Overburden covering the outcrop is very light at this point and the product, being soft, lends itself more readily to separation than the harder outcrop in other parts of the reserve.

Another feature of the Bitumount area is the usage of the separated sand for glass, quantities of which have been transported to points of manufacture.

A rich deposit of 'liquid bitumen' has been uncovered by Federal Government geologists on the west side of the Mildred-Ruth Lakes area, at Waterways, 20 miles north of Fort McMurray in northeastern Alberta. The estimate of bitumen content per acre ranges as high as 350,000 bbl.

**Natural Gas.**—The producing natural gas wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. In Western Canada the principal producing fields are in Alberta and include the Turner Valley (about 35 miles south-

\* See footnote to p. 537

west of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island and Wetaskiwin. Wainwright, Alta., is supplied with gas from the Maple Leaf Well in the Fabyan field. In 1948, Alberta was credited with 56 p.c. of total value and 83 p.c. of the total quantity of natural gas. Ontario produced over 42 p.c. of the value and over 16 p.c. of the total quantity.

## 25.—Quantities and Values of Natural Gas Produced, by Provinces, 1939-48

NOTE.—For the years 1892-1919, see the Annual Report on the Mineral Production of Canada, 1928, p. 188; for the years 1920-28 see p. 347 of the 1940 Canada Year Book; and for 1929-38, p. 350 of the 1946 edition.

## Subsection 5.—Production of Non-Metallic Minerals (Excluding Fuels)

The most important minerals in this group are asbestos, gypsum and salt, but it also includes numerous other items such as feldspar, graphite, iron oxide, magnesitic dolomite, mica, nepheline syenite, peat moss, sulphur, silica brick, sodium sulphate, soapstone and talc.

**Asbestos.**—The asbestos produced in Canada is practically all of the chrysotile variety and comes entirely from the serpentinized rock in the Eastern Townships of Quebec. The value of the annual production of asbestos increased from less than \$24,700 in 1880 to \$33,005,748 in 1947 and \$41,318,118 in 1948. The Canadian deposits are the largest known in the world. The producing centres are Thetford Mines, which has been producing since 1878, Black Lake, East Broughton, Vimy Ridge, Asbestos, and St. Remi de Tingwick in Quebec. The veins of chrysotile asbestos vary in width from one-quarter inch to one-half inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted to spinning.

The world's largest market is in the United States and Canada's proximity to this market is very advantageous to the asbestos industry in this country.

## 26.—Quantities and Values of Asbestos Produced, 1939-48

NOTE.—Figures for the years 1896-1910, inclusive, will be found at p. 424 of the 1911 Year Book; for the years 1911-28 at p. 354 of the 1939 edition; and for 1929-38 at p. 353 of the 1946 edition.

**Gypsum.**—The use of gypsum in the building trades has increased rapidly and Canada has extensive deposits of gypsum favourably situated for commercial developments. They are located chiefly in Hants, Inverness and Victoria counties, N.S.; Hillsborough, N.B.; Hagersville and Caledonia, Ont.; Gypsumville and Amaranth, Man.; and Falkland, B.C. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Gypsum is exported from Canada in crude form mainly to the United States for the manufacture of gypsum products. Canadian production of gypsum amounted to 3,219,469 tons in 1948.

### 27.—Gypsum Produced, by Provinces, 1939-48

NOTE.—Figures for the years 1926-38 are given at p. 321 of the 1943-44 Year Book.

<sup>1</sup> 1948 figures subject to revision.

**Salt.**—Salt is obtained from brine wells in the Provinces of Ontario, Manitoba and Alberta, while at Malagash, N.S., it is recovered by mining rock-salt and by evaporation from brine. The centres of production of the salt industry in Ontario are in Amherstburg, Goderich, Sandwich and Windsor.

In Alberta a new recovery plant near Lindbergh began operations in 1948; previously all the output in this Province was from the wells at Waterways. A new plant near Unity, Sask., was being made ready for production in 1949. The market for salt in Canada is steadily increasing. Domestic production is sold principally to the dairy, meat-curing and -canning industry, to fisheries, to highways and transport departments, to agriculturists for use as a soil sweetener, to the chemical industries, and as table salt. In 1948, Ontario produced 624,113 tons of salt, 84 p.c. of the Canadian total. About one-half of Canada's output is used in making caustic soda, soda ash and related chemicals.

### 28.—Salt Produced, by Provinces, 1939-48

**Sulphur.**—Sulphur production statistics given in Table 29 represent the quantity and value of sulphur contained in iron pyrites shipped plus the quantity and value of sulphur reclaimed for acid manufacture, etc., from smelter fumes. As thus defined, the commercial output of sulphur in Canada during 1948 totalled 218,020 short tons, valued at \$1,732,818, compared with 221,781 tons worth \$1,822,867 in 1947. Production in 1948 comprised 81,820 tons of sulphur in iron pyrites and 136,200 tons recovered from smelter gases. Output by provinces was: Quebec 68,570 tons valued at \$255,218; Ontario 15,250 tons valued at \$152,500; and British Columbia 134,200 tons valued at \$1,325,100.

Sulphur is used in Canada chiefly in the production of sulphite pulp, sulphuric acid and rayon. It is used also in the manufacture of explosives, rubber goods, insecticides and matches and in petroleum refining.

### Subsection 6.—Production of Clay Products and Other Structural Materials

**Clay Products and Other Structural Materials.**—Production of clay products and structural materials is dependent upon the activity of the construction industry in Canada; output in 1948 reached a record value of \$98,779,361. This group includes cement, clay and clay products (brick, drain tile, sewer pipe, etc.), lime, sand, gravel and stone. The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. Production was probably first obtained at Hull, Que., between 1830 and 1840. The manufacture of Portland cement began about 1889 and the largest production is now in Quebec and Ontario, although there are active plants in Manitoba, Alberta and British Columbia. Common clays, suitable for the production of building bricks and tile are found in all the provinces of Canada, although production is greatest in Ontario and Quebec.

Stoneware clays are largely produced from the Eastend and Willows area in Saskatchewan and shipped to Medicine Hat, Alta., where, owing to the availability of cheap gas fuel, they are used extensively in the manufacture of stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs near Shubenacadie and Musquodoboit in Nova Scotia; some of the Musquodoboit clay is used for pottery but it has not been developed extensively for ceramic use. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia.

Important deposits of high-grade, plastic, white burning clays occur in northern Ontario, and clay deposits which yield a high-grade of china clay have been found along the Fraser River in British Columbia, but china clay has been produced commercially only from the vicinity of St. Remi d'Amherst, Papineau County, Que., where mining operations were carried on prior to 1923.

Ball clays of high bond strength occur in the "White Mud" beds of southern Saskatchewan, but these have not been developed to any extent.

### 30.—Values of Clay Products and Other Structural Materials Produced, by Provinces, 1939-48

1947.....	11,936,245	21,968,909	1,248,625	3,843,652	88,030	198,354	13,096,840	25,614,207

<sup>1</sup> 'Production' as used here means quantity and value of sales.

<sup>2</sup> The barrel of cement equals 350 lb.

**Sand and Gravel.**—Deposits of sand and gravel are numerous throughout eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province, except New Brunswick and Prince Edward Island, produces natural bonded sand. The greatest part of production of sand comes from the Niagara Peninsula, Ont.

Some grades of sand particularly suitable for certain industries demand a much higher price than ordinary sand. Commercial production of sand and gravel is greatest in Quebec and Ontario; these two provinces contributed 68 p.c. of the total quantity in 1948.

The greater part of the output of gravel and sand is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

**Stone.**—The stone industry in Canada has two main divisions, stone quarrying and the stone-products industry. The kind of stone quarried in Canada includes granite, limestone, marble, sandstone and slate. The products of these quarries yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada, in 1948, totalled \$17,080,999 as compared with \$16,464,749 in 1947.

## Section 4.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc.

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. Additional data published at irregular intervals include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for 'net income from sales' of industries given in Tables 34 and 35 are those reported by the operators and are, in each case, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 3 of this Chapter where, in the case of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum where imported ore only is used and of cobalt which now comes mainly from African ores. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables 34 and 35 include products of other than Canadian origin.

### 34.—Principal Statistics of the Mineral Industries, by Groups, 1942-47, and by Provinces, 1947

NOTE.—Figures for the years 1936-41 are given at pp. 453-454 of the 1947 Year Book.

<sup>1</sup> Includes freight and smelter charges and cost of ores treated.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1944, 1945, 1946 and 1947 is presented in Table 35. The difficulties imposed by the War in the way of labour shortages, lack of new equipment and essential supplies necessary for the mines, resulted in a steady drop in the gross value of production for the entire auriferous quartz mining industry. The gross value of recoverable metals, gold, silver, etc., in the quartz mining industry, which was \$179,000,000 in 1941, fell steadily to \$86,000,000 in 1945 but increased to \$96,000,000 in 1947.

### 35.—Principal Statistics of the Mineral Industries, 1944-47

Industry and Year	Plants or Mines	Em- ployees	Salaries and Wages	Purchased Fuel, Electricity and Process Supplies <sup>1</sup>	Net Income from Sales
<b>Metallics</b>	No.	No.	\$	\$	\$
Alluvial gold.....1944	47	211	598,556	84,104	1,197,021

**Bureau of Mines.**—The Bureau of Mines serves Canadian industry through its investigative and research work covering the following fields: investigations in reference to economic matters affecting the development, use and conservation of Canada's mineral resources; the treatment and beneficiation of metallic and non-metallic ores and industrial minerals, including clays and building materials; investigations of the development, applications and use of Canadian metals and their alloys; the utilization of Canadian fuels of all types; and the administration of the Explosives Act.

To render these services, the Bureau maintains up-to-date laboratories with various auxiliary services and workshops.

**Division of Mineral Resources.**—This Division carries out continuous economic studies of the Canadian mining industry, the results of which are published in various annual reports. The Division is available for consultation by other Government Departments and by industry. Resources and occurrences of Canadian minerals are studied, as well as treatment and utilization of the industrial minerals.

\* Revised by the Department of Mines and Resources, Ottawa.

*Division of Mineral Dressing and Process Metallurgy.*—This unit maintains up-to-date laboratories and mills for the treatment of Canadian ores and ceramic materials, and the development of recommended processes. This service is available to all Canadian producers. In addition, research investigation of special problems is carried out.

*Division of Physical Metallurgy.*—This Division provides scientific metallurgical services to the Canadian metal-fabricating industries. It carries on research for improving existing alloys, developing new alloys and conserving strategic minerals. Its facilities for work on both ferrous and non-ferrous metals include experimental foundry and die casting, rolling and extruding equipment, also mechanical testing, metallography, corrosion, metal physics and welding laboratories.

*Radioactivity Division.*—This unit provides services to aid development of radioactive ore deposits in Canada. Its services, available to producers and prospective producers, include developing ore-treatment methods for extracting uranium. The Division carries on research into chemical and physical means of determining radioactivity and on developing instruments to detect radioactive ores.

*Division of Fuels.*—This Division investigates the methods of exploring, developing, mining, recovering, processing, utilizing and marketing domestic fuels. It maintains laboratories for research on solid, liquid and gaseous fuels including preparation, beneficiation, combustion, carbonization, briquetting and coking of coals; investigations on petroleum, bitumen, natural gas, and concerning hydrogenation of fuels.

*Explosives Division.*—This unit, in addition to administering the Explosives Act, 1946, and regulations thereunder, carries on research for improving the testing of explosives and assisting manufacturers in their methods and controls. The Explosives Testing and Research Laboratory is maintained jointly with the National Research Council.

## Section 5.—World Production of Metallic Minerals and Fuels

World production figures are available only for gold, silver and certain fuels. Tables 36 and 37 give historical figures of world production of gold and silver. These figures are the official returns from foreign countries but in Table 38 estimates have been included where complete data are lacking.

### 36.—Quantities and Values of World Production of Gold<sup>1</sup>, 1936-47

(Source: The Annual Report of the Director of the United States Mint)

NOTE.—Figures for intervening years from 1900-25 are given at p. 335 of the 1946 Year Book and 1926-35 at p. 463 of the 1947 edition.

Year	Quantity	Value	Year	Quantity	Value
	oz. fine	\$		oz. fine	\$
1936.....	32,930,554	1,152,569,390	1942.....	29,858,342	1,045,041,970
1937.....	35,118,298	1,229,140,430	1943.....	20,903,289	731,615,115

<sup>1</sup> Estimates not included for countries not reported in 1939 and subsequent years.

**Gold.**—About 54 p.c. of the total gold production in 1947 represented in Table 38 was accounted for by the Union of South Africa (56 p.c. in 1946); 15 p.c. by Canada (13 p.c. in 1946); 10 p.c. by the United States (7 p.c. in 1946); 4 p.c. by Australia; and 3 p.c. by Southern Rhodesia in 1946 and 1947.

**Silver.**—Silver production in 1947 showed 40 p.c. of the total for Mexico (36 p.c. in 1946); 26 p.c. for the United States (18 p.c. in 1946); 8 p.c. for Canada (10 p.c. in 1946); and 7 p.c. for Peru (10 p.c. in 1946).

<sup>5</sup> January-June.

<sup>3</sup> None

<sup>6</sup> Totals include all countries reporting.

**Coal.**—The total estimated world coal production in 1938, the latest year for which complete figures are available, was about 1,420,000,000 long tons.

**Petroleum.\***—During most of 1948 there was a scarcity of oil, but toward the end of that year a shift began to be perceptible. A drive for greater production appears to have been most successful, for world oil production was greater by 12 p.c. in 1948 than in 1947. Canadian production in 1948 was double that of 1947, 90 p.c. of this being contributed by Alberta. The Near East, led by the Saudi Arabian fields, produced 34 p.c. more in 1948 than during 1947, the United States 10 p.c. more, Venezuela 12 p.c. and Mexico 4 p.c. There was a diminishing demand in 1948 from Europe and the eastern United States.

\* Preliminary data supplied by A. C. Ballantine, Supervisor of Technical Publications, Department of Economic Affairs, Edmonton, Alta.

## Section 1.—Water-Power Resources\*

Canada, a land of many lakes and rivers, has been abundantly endowed by nature with great water-power resources which are well distributed across the country. In most sections, adequate precipitation and favourable topography result in numerous rivers on which falls and rapids frequently occur and offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the middle west, water-power resources of importance are found in virtually every part of the country. In British Columbia, where precipitation is high, the rivers flowing down the Pacific slope of the Rocky Mountains offer many fine power sites. Alberta, although a Prairie Province, also has mountain streams from the Rockies as well as great reserves of undeveloped power on its large northern rivers. The great Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay, covers part of the Northwest Territories and northern Saskatchewan as well as a large part of Manitoba, Ontario and Quebec; it is a rough, forest-covered, well-watered area characterized by innumerable lakes and fast-flowing rivers with many falls and rapids. The power of the Great Lakes-St. Lawrence River System forms part of the great resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is built and which compensates in large degree for the lack of indigenous coal. In the Maritimes, the precipitation is moderately heavy and the rivers, while not large, afford numerous possibilities for power developments of moderate size. The water powers of the Province of Newfoundland, while of considerable extent, have not as yet been accurately evaluated owing to lack of stream-flow data.

\* Revised under the direction of H. L. Keenleyside, Deputy Minister, Department of Mines and Resources, by Norman Marr, Controller, Dominion Water and Power Bureau.

#### Subsection 1.—Water-Power Resources of Canada and Other Countries

The potential resources of the combined continents of Africa and Asia represent more than 64 p.c. of the world total, whereas the total development that has been made in these two continents is only slightly more than 14 p.c. of the development in the world at large. Enormous potential resources exist on the great river systems

of Africa and Asia but much of this potential power is located in the remote areas of non-industrial countries and is without present prospective markets; it is thus of little economic interest. This also applies to substantial resources that exist in parts of South America and Oceania.

Comparison between the water-power resources of Canada and those of other countries is rendered difficult by incomplete world statistics and differing bases of tabulation; only crude estimates of potential power are possible for many countries where resources are largely unexplored.

Table 1 compares the developed and potential resources of the continents of the world and also of those countries in which the development and utilization of water-power resources has progressed to a considerable extent.

<sup>1</sup> Figures from Geological Survey of the United States Department of the Interior.

Table 1 shows that Canada, among countries of the world, ranks second in developed power, being exceeded only by the United States. In potential power, Canada stands in fourth place among the countries listed; however, Canada's reserves of undeveloped power are on the whole more readily available to prospective markets than is the case in either the Union of Soviet Socialist Republics or India. Marketable potential power in Canada in 1949 was outranked only by that of the United States.

In comparing the estimates of potential power with those of developed power, and in estimating the proportion of a nation's water-power resources already developed, it should be noted that, at fully developed sites, the installed capacities are usually two or three times the size of the ordinary-minimum-flow potential power of the same sites. For example, it is estimated that under present hydraulic

practice, the water-power resources of Canada\* would allow an economic turbine installation of over 52,000,000 h.p. and that only about 21 p.c. of presently recorded resources has been developed.

Additional information regarding Canada's water-power resources is included in the 1940 Canada Year Book, pp. 353-364. An earlier comparison is made with the resources of other countries and an extensive review is given of problems connected with the development, distribution and merchandising of power in Canada.

### Subsection 2.—Development and Growth of Water Power in Canada

Although extensive utilization at present is being made of Canada's water-power resources, there are large reserves still available for development. The greater part of this undeveloped power lies in the more remote parts but a number of sites within economic transmission distance of existing centres of population have not been exploited as yet and existing power reserves not too distant should be sufficient to meet the prospective demand for some years at least.

The development from year to year of Canada's water-power resources is a good index of the country's industrial growth and of the change in its economic life since the beginning of the present century. In 1900, prior to the inception of long-distance transmission of electricity, Canada's economy was based largely on agriculture and the total of hydraulic installations, mostly small mills, was only 173,000 h.p. With the successful solution of the problems of transmission of electrical energy for use in distant communities, the development of large hydraulic projects became practicable and, by 1910, the total installation had risen to 977,000 h.p. In ensuing decades, the growth in installed capacity, partly speeded by war demands, proceeded at an accelerated rate so that by 1920 the total was 2,515,000 h.p.; by 1930, 6,125,000 h.p.; by 1940, 8,584,000 h.p.; and by the end of 1948, installed capacity had reached 10,870,718 h.p. Continued rapid growth during the next several years is indicated by plants now under construction or planned.

The availability of large amounts of hydro-electric energy from the water-power developments has so fostered the economic utilization of the natural products from land, mine and forest, that Canada has become highly industrialized and is now one of the more important manufacturing countries. Low-cost power from Canada's rivers is fundamental in meeting the enormous demands of its largest industry, pulp and paper manufacturing, which ranks as one of the world's great industrial enterprises; it also allows the economic mining, milling and refining of base and precious metals and facilitates their fabrication into a multitude of manufactured articles. The great hydro-electric undertakings, built to meet the domestic and industrial requirements of the country, were of incalculable value to Canada's participation in two world wars, particularly in the Second World War. Between 1939 and 1945, approximately 2,000,000 h.p. was added to water-power capacity, all of which was used for war production; great quantities of power were also diverted from normal to war purposes; this allowed Canada to produce materials and munitions of war on a very large scale proportionate to population.

From hydro-electric developments ranging in size from a few hundred to more than 1,000,000 h.p., networks of transmission lines carry power not only to most urban centres of Canada but also in increasing degree to the rural areas of the country. The wide distribution of power has facilitated the decentralization of

\* Not including the new province of Newfoundland which entered Confederation March 31, 1949.

industry in that manufacturing processes covering such items as foods, textiles and forest products are carried out in many of the smaller centres of population. Low-cost hydro-electricity has also contributed to a high standard of living in Canada. Economical domestic service is supplied and is rapidly being extended to homes in many rural communities and farms, as well as to those in most towns and cities.

With a total capacity of 10,870,718 h.p., present water-power plants in Canada, if operated at full load, would produce energy at a rate corresponding to the output of nearly 110,000,000 manual workers, on the commonly accepted basis of one mechanical horse-power equalling the working capacity of ten men.

Table 2 presents a summary of the water-power resources of Canada according to the records of the Dominion Water and Power Bureau as at Dec. 31, 1948. In the case of developed power, the figures for 1947 are listed for comparative purposes.

## 2.—Available and Developed Water Power, by Provinces, 1947 and 1948

The figures listed in the first and second columns of Table 2 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head possible of concentration, has been measured or at least carefully estimated. Many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams from coast to coast (particularly in the less-explored northern districts); these will become available for tabulation only as more detailed survey work is completed. Unless definite studies have been carried out and the results made matters of record, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient, where economic heads possibly may be created by the construction of power dams. Thus with regard to possible sites, the listed figures of available power (under two conditions of stream flow) represent only the *minimum water-power possibilities of Canada*.

The third and fourth columns give the total capacity of the water wheels actually installed; these figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources developed. At developed sites, the water-wheel installation averages 30 p.c. greater than the corresponding calculated maximum available power figures included in the second column and covering the same sites. The above figures,

therefore, indicate that the *at present recorded water-power resources* will permit of a turbine installation of more than 52,000,000 h.p.; also, the turbine installation at Dec. 31, 1948, represents roughly only 21 p.e. of recorded water-power resources.

Table 3 shows clearly the consistent growth in capacity since the beginning of the century and the heavy increase in installation during the war years 1942 and 1943. During 1948 the great post-war activity in hydro-electric construction began to show results and more than 350,000 h.p. was added to the total capacity of the country; many other new plants and additions are under construction.

### 3.—Hydraulic Turbine Horse-Power Installed by Provinces, as at Dec. 31, Decennially 1900-40 and Annually 1941-48

NOTE.—Statistics for intervening years 1900-30 are given on p. 361 of the 1939 Year Book; for 1931-40 at p. 362 of the 1946 edition.

Percentages of total installation.....	91.4	6.1	2.5	100.0

<sup>1</sup> Includes only hydro-electric stations that develop power for sale. <sup>2</sup> Includes only water power *actually developed* by pulp and paper companies. <sup>3</sup> Includes only water power *actually developed* by industries other than central electric stations and the pulp and paper industries. <sup>4</sup> All water wheels and hydraulic turbines installed in Canada.

It may be noted that central electric station classification totalling 9,936,524 h.p. represents more than 91 p.c. of the total developed water power as at Dec. 31, 1948. In 1900 the corresponding percentage was 33.5, thus showing the tremendous growth in the central electric station industry since the inception of successful long-distance transmission of electricity. Central hydro-electric stations produced 97 p.c. of all electricity sold in or exported from Canada during 1948.

The pulp and paper turbine installation total of 658,741 h.p. shown in Table 4 includes only water power *actually developed* and directly used by pulp and paper companies. In addition, this industry is the greatest purchaser of central station power, buying about 33 p.c. of all power sold for industrial purposes. Part of the purchased power is classed as secondary, being used for steam generation by electric boilers which in 1948 had a capacity of about 1,900,000 h.p. The motor installations for the use of primary purchased power aggregate approximately 1,625,000 h.p.

The 'other industries' group of Table 4, column 3, develops 275,453 h.p. solely for its own use. These diversified industries also provide a broad market for the power sold by the central electric stations.

The figure of total hydraulic installation in Canada, 10,870,718 h.p., is the cumulative total of installation for all water wheels and hydraulic turbines. It has been adjusted to Dec. 31, 1948, by the addition of any installations made during the year even though this equipment may not be in use; adjustments are also made covering turbines or water wheels that have been removed. Somewhat similar figures are reported by the annual Census of Industry: they differ slightly since they are compiled on a different basis and represent only the sum of the installations in the plants actually in operation during the year being reported by the Census, not total installation.

### Subsection 3.—Provincial Water-Power Developments, 1948

During 1948, the construction of hydro-electric developments throughout Canada proceeded at high tempo, although some delays were experienced due to late deliveries of electrical and mechanical equipment and to shortages of some materials. New capacity coming into operation in 1948 totalled 440,095 h.p.,\* the rate of expansion well exceeding the yearly pre-war average of about 300,000 h.p. However, a huge demand for electric energy not only readily absorbed the output of new plants but accelerated the greatest program of hydro-electric expansion in the history of the country. Plants under construction, which are expected to be completed or in partial operation within two years, will have a capacity of about 1,000,000 h.p. while those on which preliminary construction has been started, or which are definitely planned, will add perhaps 2,000,000 h.p. within five years. In addition, long-range plans envisage the development of many other sites which have been under investigation, a number of them being of high capacity. Current progress in each province is outlined below.

*Maritime Provinces.*†—In the Maritime Provinces, the Nova Scotia Power Commission brought into operation in 1948 a new plant on Dickie Brook with a capacity of 2,900 h.p. in two units; a third unit of 3,000 h.p. is planned. The Commission also had under construction a plant of 12,000 h.p. on the Mersey River and was planning the development of 4,800 h.p. on the Tusket River. The Nova Scotia Light and Power Company completed a development of 4,600 h.p. on Methalls Brook and is proceeding with an addition of 4,500 h.p. to its Black River Plant.

*Quebec.*—In Quebec, new units coming into operation in 1948 had a total capacity of 118,000 h.p. The Quebec Hydro-Electric Commission completed the fourteenth unit of 53,000 h.p. in its No. 1 Beauharnois Plant, St. Lawrence River, and began work on No. 2 power-house which will have an ultimate capacity of 600,000 h.p. and will be in partial operation by 1951; the Commission also completed a storage dam at Lake Dozois, upper Ottawa River and a fourth unit of 16,000 h.p. was being installed in the Rapid VII Plant. The Shawinigan Water and Power Company brought into operation the first unit of 65,000 h.p. in its new development of 195,000 h.p. at Shawinigan Falls, St. Maurice River; the Company also began a development at La Trenché Rapids, upper St. Maurice River, which will have an ultimate capacity of 384,000 h.p., partial operation being scheduled for 1951. The Gatineau Power Company proceeded with the addition of the third and final unit of 27,000 h.p. in its Bryson Plant, Ottawa River. The Northern Quebec Power Company started to increase the capacity of its existing 40,000-h.p. development at Quinze River by raising the head 20 feet and installing a new unit of 34,500 h.p. for operation in 1950; the planned ultimate capacity is 119,000 h.p. Smaller projects under way include additions of 3,000 h.p. by Pembroke Electric Light Company to its Black River Plant, 3,200 h.p. by Ogilvie Flour Mills to its plant on the Lachine Canal, 4,200 h.p. by the Municipality of Jonquière on Aux Sables River, and 2,640 h.p. by the Cie Électrique de Mont Laurier on the Lièvre River.

\* This figure is somewhat larger than that indicated in Table 3. This is due to the fact that the net figures of Table 3 take into account installations that went out of use in 1948 and adjustment of totals.

† In addition to the water-power developments described, several new fuel-electric plants were under construction including: a steam plant of 10,000 kw. at Cantleys Point, N.S., by N.S. Power Commission; additional capacity of 20,000 kw. at Halifax by N.S. Light and Power Company; a 15,000-kw. plant at Maccan, N.S., by Canada Electric Company; and a 18,000 kw. plant by Seaboard Power Corporation in Cape Breton. The New Brunswick Electric Power Commission during 1948 completed an addition of 12,500 kw. to its steam plant at Chatham, N.B., and added four new diesel plants to its system.

*Ontario.*—The Hydro-Electric Power Commission of Ontario added to its generating capacity a total of 142,000 h.p. in three plants; 81,000 h.p. in the new Stewartville plant on the Madawaska River, 53,500 h.p. in the new Aguasabon plant on the north shore of Lake Superior, and a fourth unit of 7,500 h.p. in the Ear Falls plant, English River. The Commission also had under construction, on the Ottawa River above Pembroke, the Des Joachims development, 480,000 h.p. in eight units, five of which will be in operation in 1950; the Chenaux development on the Ottawa River at Portage du Fort, 160,000 h.p. in eight units, initial operation being scheduled for 1951; and the La Cave development, on the Ottawa River above Mattawa, 240,000 h.p., to be tentatively in service in 1952; Pine Portage development, Nipigon River, ultimate capacity 160,000 h.p. in four units, of which two are expected to be in operation in 1950; Tunnel Development, Mississagi River, 58,000 h.p., planned for 1950 operation; and a steam-electric generating station at Windsor, 161,000 h.p., for operation by the autumn of 1951. Other projects were under study by the Commission including developments on the St. Lawrence, Niagara and English Rivers and a steam plant in the Toronto area. Two smaller hydraulic projects were completed in the Province, 1,200 h.p. on the Muskoka River by the town of Bracebridge and 1,300 h.p. on the Rideau Canal system by the Gananoque Electric Light and Water Supply Company.

*The Prairie Provinces.*—In Manitoba, the Winnipeg Hydro-Electric System completed the installation of the eighth and final unit of 12,000 h.p. in its Slave Falls plant, Winnipeg River. The Winnipeg Electric Company continued work at its Seven Sisters plant, Winnipeg River, towards raising the head and the installation of a fourth unit of 37,500 h.p. The Manitoba Government has undertaken the development of 114,000 h.p. at Pine Falls, Winnipeg River, and plans to have the plant in initial operation in 1951.

In Saskatchewan, the Churchill River\* Power Company during 1948 completed the installation of a sixth unit of 21,000 h.p. in its Island Falls plant, bringing the total capacity to 108,500 h.p.\*

In Alberta, no new hydraulic developments were actively underway in 1948 but Calgary Power Limited was preparing to proceed with a development of 65,000 h.p. at Spray Lakes in the upper Bow River basin.

*British Columbia.*—In British Columbia, a total of 92,745 h.p. was added to the hydraulic capacity of the Province during 1948. The largest individual addition was that of the first unit of 62,000 h.p. in the Bridge River plant of the British Columbia Electric Railway Company which was brought into operation in October; the plant is designed for an ultimate installation of 10 units. A storage dam was under construction at La Joie Falls, 45 miles upstream. The British Columbia Power Commission, early in 1948, brought into operation the second unit of 28,000 h.p. in its Campbell River development, Vancouver Island, and work proceeded on the installation of the third and fourth units and on the construction of a storage dam at Ladore Falls. The Commission also has under construction a development at Whatshan Lake which will have an ultimate capacity of 60,000 h.p., initial operation being scheduled for 1950. The Consolidated Mining and Smelting Company was enlarging its Brilliant plant, Kootenay River, by the addition of a third unit of 37,000 h.p. Other smaller projects completed in 1948 include 1,600 h.p. on the

\* In addition to the water-power developments described, the Saskatchewan Power Commission increased the capacity of its steam plants by 7,500 kw. at Prince Albert and by 5,000 kw. at Estevan. Canadian Utilities completed a new steam plant of 13,500 kw. at Drumheller, Alta.

Kitzault River by Torbrit Silver Mines, 800 h.p. added to the Goat River plant of the West Kootenay Power and Light Company and a new 250-h.p. plant on Trout Lake by the Harrison Hot Springs Hotel.

*Northwest Territories.*—The Northwest Territories Power Commission was established under authority of the Northwest Territories Power Commission Act, 1948 (11-12 George VI, c. 64). The purpose of the Act is to facilitate the construction and operation of electric power plants in the Northwest Territories for mining and other interests. Power from such plants is sold at as low a rate as possible, subject to them being on a self-sustaining basis from the standpoint of interest and amortization charges, operation, and maintenance. The Act permits the development of the electric power resources of the Northwest Territories promptly when the need arises, and makes it possible for mining companies to expedite production.

The Power Commission owns and operates under Federal Government auspices the hydro-electric plant on Snare River, some 90 miles north of Yellowknife, N.W.T. This project has an installed capacity of 8,350 h.p. and can generate as much as 9,000 h.p. Electric power is carried by a 90-mile transmission line from the generating plant on Snare River to the vicinity of Yellowknife, where it supplies power to the local mines and also the greater part of the requirement of the Yellowknife Power Company, which distributes and sells power to the Yellowknife Settlement.

The Commission is constructing a diesel generating plant at Fort Smith, N.W.T., and is investigating a similar type of plant for installation at Hay River, on the south shore of Great Slave Lake. The Commission is also undertaking investigations of a possible hydro-electric plant on the Mayo River, Yukon Territory, for the benefit of the silver-lead mines in the Mayo District. It keeps in touch with power needs in northern Canada, and is authorized under the Act to make investigations, construct power plants, and sell power either on a wholesale or retail basis.

## Section 2.—The Central Electric Station Industry

An article dealing with government control of power in wartime is given at pp. 336-337 of the 1945 Canada Year Book.

**Summary of Energy Generated by Type of Station, 1946 and 1947.**—Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial—those privately owned and operated by companies or individuals, and (2) municipal—those owned and operated by municipalities or Provincial Governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with approximately 88 p.c. of the total capacity of hydraulic installations in all industries in Canada and the generators driven by this hydraulic equipment generate 98 p.c. of the total output of all central electric stations.

**5.—Electric Energy Generated, by Type of Station, 1930-45, and by Provinces, 1946 and 1947**

**Subsection 1.—Statistics of Central Electric Stations\***

The growth of the central electric stations industry has been almost continuous since 1919, when statistics of kilowatt hours generated were first made available. The depression that occurred in the early 1930's resulted in decreased output of power for several years but output soon recovered. During the war years 1939-44 the equipment was used to the practical maximum capacity, the output increasing by 42 p.c. from 1938 to 1944. The output declined slightly in 1945 but rebounded in 1946 to 102 p.c. of the 1944 figure. During 1947 a new record was established which was nearly equalled in 1948.

The central electric stations industry is one that is particularly suited to large-scale operations because of the huge outlays of capital necessary. Capital invested and total horse-power installed increased almost continuously even during the depression years, mainly because large power projects, planned before the depression, were in process of construction. Off-peak and surplus power, used mainly in electric boilers of pulp and paper plants, grew steadily to a peak of 7,803,000,000 kwh. in 1937 but, owing to war requirements for firm power, it was reduced during 1940-45, but rebounded to a new high of 8,067,489,000 kwh. in 1946. In 1947, secondary power consumption was reduced to 5,595,344,000 kwh. and to 2,303,987,000 kwh. in 1948 as increased primary demand and low water levels left less available for off-peak use.

\* Revised in the Transportation Division, Dominion Bureau of Statistics.

**6.—Summary Statistics of Central Electric Stations, 1932-47**

NOTE.—Figures for the years 1917-31 will be found at p. 369 of the 1940 Year Book.

Year	Stations	Capital Invested	Revenue from Sale of Power <sup>1</sup>	Power Equipment Capacity <sup>2</sup>	Kilowatt Hours Generated	Customers	Persons Employed	Salaries and Wages

<sup>1</sup> Excluding duplications.<sup>2</sup> Not including auxiliary-plant equipment.

Although the amount of power used by domestic customers or for residential purposes is now only 10 p.c. of the total production of central electric stations, this service is exceedingly important. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct federal, provincial and municipal taxes on such service, are shown in Table 7. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces; there are smaller differences between the average bills.

**Equipment of Central Electric Stations.**—Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or

spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, the kilowatt hour capacities vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality. The number of thermal engines declined from previous years as equipment data were not included for small plants, mainly in Saskatchewan and Alberta, whose output was largely consumed by their own industry or firm.

### 8.—Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1947

**Farm Service Furnished by Central Electric Stations.**—Table 10 shows the number of farm customers, the average annual consumption, average annual revenue exclusive of the 8 p.c. federal tax, and the average revenue per kilowatt hour sold to these customers in each province for 1947.

Effective Jan. 1, 1944, the Ontario Hydro-Electric Power Commission reclassified its rural customers, including under "farm customers" only farm contracts whereby one or more dwellings occupied by families engaged in the operation of the farm would be counted as one customer. This classification excluded other rural dwellings, stores, garages, repair shops, etc., also small properties of five acres or less except under special conditions. This change in classification explains the apparent decrease in farms served as shown in previous years, but by 1947 there were 81,670 farm customers in Ontario compared with 62,303 in 1944 and 66,686 on the farmer basis in 1943. The Ontario Government pays for part of the cost of installing services to farm customers, which accounts in part for the lower average revenue per kilowatt hour in Ontario as compared with the other provinces.

**Export and Import of Electric Power.**—Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kilowatt hour is levied with some exceptions. The export duties for the fiscal years ended Mar. 31, 1945 to 1948 were \$639,320, \$694,518, \$598,751 and \$470,627, respectively.

Exports for the years 1945-48 are shown in Table 11. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Quebec to New Brunswick, Manitoba to Ontario and British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by 5,000 cu. ft. per second to the Canadian side in November, 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted, and in 1943 an additional 4,000 c.f.s. to Canadian plants bringing the totals up to 54,000 c.f.s. for Canada, and 32,500 c.f.s. for the United States. This increased water with greater development of plants on the St. Lawrence River made possible the increased export of both firm and secondary power to the United States (5,000 c.f.s. will produce about 150,000 h.p. at the Queenston, Ont., plant). During 1947 and 1948, increased demands from consumers and low water reduced the surplus energy available for export.

### Subsection 2. — Public Ownership or Regulation of Central Electric Stations\*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies—hydro-electric plants. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of municipalities to develop and distribute electricity. The Hydro-Electric Power Commission of Ontario now generates and purchases power, transmits it to rural and urban municipalities and serves large power customers. Similar commissions have been formed in most of the other provinces.

\* The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

A large portion of the power development in Quebec is connected with pulp and paper plants and with the aluminum industry. Such power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Also, substantial blocks of power are produced in Quebec for export to Ontario.

Table 13 shows statistics of municipally or publicly owned central electric stations, by provinces, for 1946. Table 24 at p. 582 shows comparable statistics for commercial stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized by provinces below.

**Nova Scotia.**—In 1909 legislation was first enacted in Nova Scotia relating to the use of water power in "An Act for the Further Assisting of the Gold Mining Industry". This was the most advanced legislation until the development of water power within the Province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Federal Government until 1919, when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Federal Government through the Dominion Water and Power Bureau with which The Nova Scotia Power Commission is closely associated. The control of the water resources of the Province is vested in the Crown and administered under the provisions of The Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function and policy of the Commission is the supply of electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service. It provides for financial assistance to equalize cost and revenue of extensions, the construction of which have been approved by the Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transformation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1948, showed total fixed assets of \$22,686,803, including work in progress amounting to \$734,742. Current assets amounted to \$273,294. Liabilities are shown as follows: fixed \$17,998,783; current \$576,479; contingency and renewal reserves \$2,472,575; sinking fund reserves \$3,597,246, and general and special reserves \$1,689,666.

The initial development of the Commission was an 800-h.p. installation on the Mushamush River, which went into operation in 1921 and delivered 192,000 kwh. in the first complete year of operation. This and later developments are shown in Table 14.

**14.—Present Developments with Initial Capacities of Undertakings of the Nova Scotia Power Commission**

Hydro Systems	First Year of Operation	Installed Capacity		Annual Output Generation	
		Initial	1948	Initial	1948

<sup>1</sup> Minimum head.

<sup>2</sup> Distribution system only.

<sup>3</sup> Rated in kilowatts.

The nine systems comprised 2,244.15 miles of combined transmission and distribution lines and served 39 wholesale and 15,998 retail customers at Nov. 30, 1948. Twenty generating stations and 44 generating units are in service with a total installed capacity of 83,281 h.p. The total delivery to customers, which is somewhat variable, has reached 249,449,505 kwh. per year.

The Dickie Brook hydro-electric development of the Antigonish System first went into operation on Sept. 21, 1948, increasing the System installation by 2,900 h.p. at normal operating head and making provision for an additional 1,450 h.p. when required. Units are rated at 1,750 h.p. at 298 ft. head.

Construction work is being carried on for the erection of a steam plant in Pictou County which is expected to begin operation in 1950. This plant will have an initial installation of 10,000 kw.

Deep Brook hydro-electric development on the Mersey River, now under construction, will add 12,000 h.p. to the Markland System. It is scheduled to start operation early in 1950.

**New Brunswick.**—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned and operated by the Commission are as follows:—

<u>Plant</u>	<u>Type</u>	<u>Capacity</u> h.p.
Musquash.....	Water power.....	10,000
Kouchibouguac.....	Water power.....	200
Grand Lake.....	Steam.....	26,800
Saint John.....	Steam.....	25,500
Chatham.....	Steam.....	16,750
Grand Manan.....	Diesel.....	645
St. Quentin.....	Diesel.....	550
St. Stephen.....	Diesel.....	3,300
Campobello.....	Diesel.....	335
Andover.....	Diesel.....	535
Shippegan.....	Diesel.....	2,680
TOTAL CAPACITY.....		87,295

The Musquash, Grand Lake and Kouchibouguac plants are inter-connected and operate in parallel at all times.

In 1948 the New Brunswick Electric Power Commission completed 66,000 volt lines from Chatham to Moncton, Chatham to Nelson, Coverdale to Hillsboro and Coal Branch to Buctouche. High-voltage transmission was thereby increased from 348 miles in 1947 to 476 miles in 1948. Power is sold *en bloc* to the cities of Saint John, Moncton, Fredericton and the town of Sussex.

The statistical information given in Table 15 shows the growth of the Commission's undertakings since 1924.

**15.—Growth of the New Brunswick Electric Power Commission, Years Ended Oct. 31, 1924, and 1944-48**

**Quebec.**—*The Quebec Streams Commission.*—Created in 1910 by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (R.S.Q., c. 46) and by 20 Geo. V, c. 34, the Commission was authorized to ascertain the water resources of the Province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams.

From 1912 to 1925, a number of storage reservoirs were built or acquired by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q. 1925, c. 46, to build the necessary dams; such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons. In all, the Commission now controls and operates 28 storage-reservoirs in the Province.

Among the rivers controlled by the Commission, either by means of dams on the rivers themselves or by controlling the outflow of lakes at their headwaters, are: the St. Maurice, now developing 1,110,550 h.p.; the Gatineau, 528,000 h.p.; the Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; the Au Sable, 33,200 h.p.; and the Metis, 15,700 h.p. The Commission also operates nine reservoirs on Rivière du Nord, two in the watershed of Ste-Anne-de-Beaupré River, and one at the outlet of Lake Morin, on Rivière-du-Loup (en bas).

*Reservoirs not Controlled by the Quebec Streams Commission.*—Among storage-reservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; the Témiscouata Lake on Madawaska River, controlled by Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by Dominion Textile Company; Temiscamingue and Quinze Lakes on the Ottawa River, controlled by the Department of Public Works of Canada; Kipawa Lake on the Ottawa River, controlled by Canadian International Paper Company; Dozois Lake on the Upper Ottawa River, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, amount to 1,950,000 h.p. since the Chute-à-Caron (Shipshaw) project has been completed.

*The Quebec Hydro-Electric Commission.*—The Quebec Hydro-Electric Commission was established by 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, industrial or commercial undertakings and citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this Act, the Commission took over: (a) the system of Montreal Light, Heat and Power Consolidated for the generating and distributing of electricity; (b) the undertaking of Montreal Island Power Company for the generating and distributing of electricity; and (c) all the shares of the capital stock of Beauharnois Light, Heat and Power Company. Thus, Quebec Hydro-Electric Commission acquired the control, among other assets, of the following hydro-electric plants:—\*

<i>Hydro-Electric Plant</i>	<i>River</i>	<i>Installed Capacity</i>
Cedars.....	St. Lawrence.....	200,000 h.p.
Chambly.....	Richelieu.....	9,000 h.p.
Sault-au-Récollet.....	Rivière-des-Prairies.....	45,000 h.p.
Beauharnois.....	St. Lawrence.....	730,000 h.p.

\* The Commission also purchases 175,000 h.p., mainly from the Shawinigan Water and Power Company.

The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts embracing a population of nearly 1,500,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to the Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of rates of 100,000 h.p. to Massena, N.Y. and 250,000 h.p. to Ontario.

#### 16.—Growth of the Quebec Power Systems, 1935-48

Year	Municipalities Served	Customers Served	Power Distributed	
			Total	Primary
	No.	No.	h.p.	h.p.
1935.....	61	266,744	540,000	405,000

Massena System.....	123,000	104,000	94,000	125,000	128,000	128,000
<b>Totals.....</b>	<b>942,000</b>	<b>897,000</b>	<b>883,000</b>	<b>947,000</b>	<b>980,000</b>	<b>1,034,000</b>

In addition to the ownership and operation of these generating and distribution systems, the Quebec Hydro-Electric Commission administers the 48,000-h.p. Upper Ottawa River plant at Rapid VII and also the Dozois Reservoir. Average primary power statistics for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1943, 15,030 h.p.; 1944, 16,820 h.p.; 1945, 14,720 h.p.; 1946, 15,750 h.p.; 1947, 18,140 h.p.; and 1948, 21,270 h.p.

**Ontario.**—*The Hydro-Electric Power Commission of Ontario.* — An account of the inception and operations of the Commission is given at pp. 377-378 of the 1940 Year Book.

Since 1945 the Commission has been engaged in implementing the power development program for which plans were started before the termination of the Second World War. The following statement shows the existing and authorized power resources of the Commission as at Jan. 1, 1949:—

AVAILABLE POWER RESOURCES OF THE HYDRO-ELECTRIC

*Hydro-Electric Power Commission Statistics.*—The Annual Reports of the Commission present, in detail, descriptions and statistics of operation, construction municipal work, transmission and distribution. The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities.

The Commission was established by special Acts of the Provincial Legislature in 1906 and 1907. In 1909 a comprehensive transmission system was commenced and by the end of 1910 power was being supplied to several municipalities. The initial capital expenditure required for this purpose was approximately \$3,600,000. At Oct. 31, 1948, the total capital investment amounted to \$712,760,245, of which \$546,352,576 represented investments by the Commission in generating plants, transmission systems, etc., operated by the Commission for the major systems under its control; \$166,407,669 represented investments by municipalities in local distributing systems of their own, including other assets. Similarly, total reserves of the Commission and of the municipal electric utilities for sinking funds, renewals, contingencies and insurance purposes amounted to \$495,896,508, of which \$342,281,112 represented reserves of the Commission and \$153,615,396 represented reserves and other assets of the municipal electric utilities.
